# Foreword

Why can Barry Gumm say Cornerstone Targeting (Tri-Rhythms) are the HOLY GRAIL of Trading Targeting Accuracy, the **No1 Market Top Secret**? It is simple really.

The process and technologies he uses demonstrates he achieves a trading targeting accuracy rate of 95%, quite often at 99.++++% (fourth decimal point) and better and sometimes 100% correct.

If Barry sets a target the Market usually hits or get very close to it. Usually within 5 points on the first run not on the rebounds! Brokers who say well the market went past my target then came back to it, are saying well I was right on the rebound.

Not Barry if he sets a target using the numbers the market has given him, the market will or usually gets very close to that target the first time! Why? After all he is using the formula and process technologies the markets have shown him. With nothing more than a chart, calculator and trading execution software Barry's (Tri-Rhythms) are calculated and the trades set in motion.

He does not use the hundreds of indicators or even a few - in fact he does not use any. He proves his formulas are very close, or right on target, much more than the

coveted Fibonacci although he still retains Fibonacci, which is, after all, for a small amount of the time, useful in trading.

He does not spend hours on fundamental data, moving averages and the such like. He can do it on any time frame (including trading Tick charts) and on any stock, Futures, Options or Commodity, Index or Forex just to name a few.

In this book you will find charts but not 'after the fact charts'. Some charts are complete, but MOSTLY the charts shown are live or as live as he could get them and he demonstrates the calculations in the charts before the markets get to where he said they would, showing you where the calculations are taken from (first Chart), the markets, as they move towards the target (second chart) with the completion and accuracy of the target on the third chart.

This demonstration is unique. He puts his neck on the line, before the markets have shown the outcome and puts the evidence of such in this book. You are left in no doubt how to calculate the entry, the intermediate targets, and the final targets, seconds (tick charts) to years in advance and the exit points, to usually a 98% or greater accuracy (certainly over 95% accuracy).

Unbelievable? Yes, it is. And that is why Cornerstone Targeting (Tri-Rhythms) are called the HOLY GRAIL of trading targeting accuracy. The No 1 Market Top

Secret. You can achieve greater than 95% accuracy just by applying the contents of this book!

To mine, or Barry's knowledge, no other trading book has done this:

- (a) Shown how to do it easily, consistently
- (b) Demonstrated it in charts as the market completed them or reached the targets -usually with an accuracy of over 95%.

The exceptional skills of Barry Gumm are demonstrated clearly, explained simply, and visually shown.

You are left with the confidence that you can commence trading from one reading of this book, get it right, increase your accuracy and - if you have never traded before -trade with the knowledge that the processes and technologies have set you on a path to trade profitably from day one!

Chris Flethall USA

# Introduction

I started my career in financial services over twenty years ago, with National Mutual Australia, selling various types of insurances, superannuation and investment plans, as well as both savings and lump sum bonds on a 100% commission basis.

I then became a Financial Planner and became very good indeed. Associates would tell me I was a smart operator but it wasn't until I successfully moved my operations to Sydney that I really proved to myself that I was.

However, as we all do in our working lives, I encountered problems. Namely, the Fund Managers and the Brokers I referred my clients to. Always, in the end they lost my clients' money. This was greatly distressing over time and over a long period of time I faced the same thing again, with an 'Investments Markets Specialist Adviser' as my business partner.

We went our separate ways, with me paying four times what his share of the business was worth. After all he just lost most of his clients' money and, therefore them as well. He was trading Hot Warrants, a type of futures contract. But he did not look far enough into the future to see that the cycle had changed from up to down and, boy, was it changing!

With Hot Warrants, if you get the direction wrong, and hold the positions, eventually the Warrants expire and are worthless, which is what happened. In fact, get it wrong by a day and you are in a mess with hot warrants. Options as well, especially if you get the trend wrong. Being one day out was all it took to lose their money as it were.

In reality he should have sold the positions (closed them out) for whatever price was available and at least got some of the clients' money back instead he just allowed them to expire! Even though I said sell them. He would not listen to me, or our clients that said hey, we are going down go SHORT. He said the markets always go up – a false belief. This is why the majority of brokers do not SHORT the markets, and Mr and Mrs Average think these advisors know what they are doing and rely on their 'advice' and advice of Financial Planners.

After this experience I decided I should trade for the clients myself. I would become the Investment Markets Specialist adviser. Just over a year later I was trading heavily and winning for my clients, but then I followed a highly respected International Market Analyst firm's recommendation in July / August 2010 that said the markets were going down.

I believed them, as they were reputed to be the biggest in the world and the owner had been in the markets some forty years. So I went SHORT, heavily SHORT. I made \$95,000 for one client alone in 30 minutes, plus some nice money for my other clients but by 10:35am

the market (SPI – Sydney price index) started to turn around and go up. No matter, I thought at the time and kept SHORTING more.

I was making the mistake that most people make - listening to someone else, who should have, could have, would have known but didn't - even though they had been around a long time and were supposedly the best in their field.

The analyst firm said we are crashing (and have done so for the last three years since but the DOW Jones and SP500 keep rising. Why? The answer is in this book. By the end of the next day I had lost most of the previous day's gains. About six weeks later I realised that I was highly depressed. A few months later I healed myself of the depression and vowed I would not be caught like that again.

If you wish to know how I healed myself of depression so quickly go to <http://www.revampyourmind.com>

Again and again, I see friends wanting to make money quick in the markets; they say to me I want to get it back, quick! I say to them that there is no quick money in the market only QUICK LOSSES! Let me repeat that for you, there is no quick money in the market only QUICK LOSSES!

In 2011 I started studying more heavily than usual. Like a mad man, putting in 90 – 100 hours a week, including Saturday and Sunday. I allowed myself two hours per

week to let the brain cool down as it were. I did not see, or chat to, clients unless I had too. I was on a mission and I was going to find out the truth - the truth on how the markets truly moved and I was going to get my accuracy over 95%.

I was studying seven days a week. April came and I cut the study down to 80-90 hours per week. Then July came and I cut the hours of study down to 60-70 hours per week. I put in 3,000 hours of study in just 9 months.

On the 28th October 2011, I went to a client's funeral in Sydney. Despite the sadness of that occasion, during the week spent in Sydney I realised I could now trade to a point value on indexes and stocks to greater than 95% accuracy. It had only taken me nine months of extreme intense study. Just nine months - that's all. People who have spent their working lives in or on the market do not know what I know.

On my way back home from Sydney I was as happy as could be. It was a Friday and I knew the market XJO and SPI was about to bounce and go up a long way.

On the morning of the following Monday (the 31st of October, 2011) I was ready to put on a lot of trades - some LONG, some SHORT - and I got a call from a friend who said something is wrong with MF Global. I had not been listening to the news during the week that I had been in Sydney. I don't normally listen to the news now anyway, but back then I was in the habit of paying some attention to it.

I pulled up a chart and in two seconds realised that they were going to go bankrupt that night in New York. I was trading via Commsec (Commonwealth Securities, operated by the Commonwealth Bank of Australia) and although I thought that was safe, later found that they were settling with MF Global for their over the counter CFD's (Contracts for Difference), a type of Futures Contract.

I emailed them at 8:30am and said, "GET MY CLIENTS OUT NOW. ZERO THE ACCOUNTS. ALL OF THEM. DO IT NOW! DO IT NOW! That night (Australian time) MF Global went bankrupt in New York. I had saved my clients and on Tuesday morning all of their money was back to where it was safe.

Soon after, I heard that the vast majority of advisers did not get their clients out in time, even though they knew something was wrong. Reports began to emerge of many people losing their life savings. They, along with the advisers, did not see the risks, did not assess the risk properly or just did not bother to look further. Since that time I have had a little more practice and can now time the market, down to a four minute window - the lowest time window you can time it to, using the law of Vibration and Harmony.

Why a four minute window? Well, the Earth turns one degree on its axis every four minutes. Using the Law of Vibration & Harmony, that is the smallest period we can go down to. Then there may be an announcement lining

up with a four-minute window, making it a little easier. Only the best in the world can time the markets down to a four-minute window, and I was now one of them. Why the law of Vibration and Harmony? You will find out in the pages of this book.

I have decided to let the mums and dads learn how a simple technique can allow them to make money on the markets in a very short period of time (hours even). Certainly not the three to five years I was told. Or the five years it took me (including the MF Global Period of destruction and depression I endured) to learn how to do it safely, confidently and with almost 100% predictability.

To some degree I am glad MF Global happened. I had the time to think and perfect the trading accuracy technique I am going to show you and, because of it, I will probably help thousands of people instead of just a few. I am, however, sorry it happened as the circumstances it put advisers and investors in were horrible indeed.

To think, it cost me hundreds of thousands of AUD dollars to get this information, to assimilate it, then come up with a formula plus a \$7,000 AUD course, 100 trading books, the millions lost and the millions lost for clients over the years, from whomever all because brokers, and such like, do not and did not know. **Yet, I am letting information out the BEST PROFIT making technologies of any market to the trading communities of the world, whilst being the simplest,**

**strategy of targeting the markets have ever known for around \$50.00 AUD per book approximately.**

Einstein apparently said that 'MC<sup>2</sup> is easy but could you come up with it? – i.e.: a simple technology and process to get it right (and close to and sometimes 100% right) but very hard to work it out initially. I not saying I am Einstein, I would not even come close.

I have written this book to help people. I am told that in one's younger years one wants success; in the later years one wants significance. I realised I was in the latter, so I am writing this book so that others do not have to go through the pains I did. In fact, if one is wise, they could make money trading very quickly and make a lot - if they wish to.

In this book you will discover a simple technology that will beat all the other indicators you may be watching (this is not another indicator - not at all or in the slightest). By doing this simple calculation, you will save yourself hundreds of hours a year in watching the screens. It will free up your valuable time.

It will give you peace of mind when entering a position and you will know the exact outcome (or almost the exact outcome) before you execute the trade. What I am going to show you is going to lower your risk, multiply your profitable outcomes and allow you to complete a simple calculation and get the right outcomes over 95% of the time. Like me, you can eventually achieve almost

100% accuracy most of the time, if you follow the few basic rules.

Would you like that? Well I studied and studied, I studied Ralph Elliott and what he called the Elliott Wave Principle (which for the remainder of this book will be called the Wave Principle or Wave Theory). If one has a good understanding when applying the methods in this book it may help but it is not necessary as within these pages are the correct pathways to use (Tri-Rhythms), as I have named them, to get a greater than 95% accuracy and, in time, over 99% accurate.

After all, Ralph Elliott could target to the point and get it right using his method. He was however, only using small numbers up to 500 points on the DJIA. Then, of course, when you read deeper it shows it was using a **volume indicator!** Why it cannot be done (targeting) today by the vast majority of stockbrokers and traders, market analysts, market investment specialists advisers (fancy term for brokers) intrigues me.

If Ralph Elliott using the wave theory could target to the point 90 years ago then why can't it be done today? I studied W.D. Gann. I studied Bradley Cowan's courses and marvel at that man's knowledge and thank him for writing his courses.

Instead of what he has done (Mr Cowan or anyone else) in the last 230 years since the New York Stock market has been open, or the London exchange, I am showing you a **very simple method** of calculating and projecting

price targets. There is no way I would come close to Bradley Cowan, he is brilliant and gifted; I however, in life, have always tried to find a simple way round things and problems and I have and did sometimes at great cost and that has been the case in learning the information that I am showing you. In this book is all you will need to know.

I discovered a mathematical technology truth that no one else has in their books or has published and it is easy to use. Anyone can do it with just the material in this book a chart and a calculator; both of which easily accessible on a tablet.

This mathematical truth and technology works on all time frames and only takes a few minutes to work out. In fact it takes less than a minute with a bit of practice. If you are trading 10 or 30 second charts you must react very quickly and be very confident of what is going to happen and what your targets are.

Would you like to look at a chart, do a calculation and enter a winning trade that will have a greater than 95% chance of success and all in less than a minute?

This book will show you how to use the Tri-Rhythms with the Rhythms that God has placed in our universe to do just that.

With the target in mind of winning 95% and then on to 99% of the time or more we start in chapter one with why this is so dependable.

You do not need market knowledge, if you are new to trading or investing. All you need to know for targeting price is in this book.

There is no or little need for:

- Use of indicators
- Use of averages
- Use of moving averages
- Use of fundamentals
- Use of Astronomy
- Use of Astrology
- Use of Cycle Analysis
- Monthly Subscription Service
- The news
- Trading Rooms & Online Trading Chat

All the above is not needed for targeting price. They are just a distraction. Although you can use them particular Astronomy and Astrology for price and timing.

Just draw a few lines on a page and make some calculations and due to that this comes under Technical Charting. However you are not looking for a heap of different patterns you are looking for just a couple at the start of a trend.

If you are a trader and just want to skip the background information you may wish to go straight to chapter four may I suggest however you take the time to read this properly. I say that because I know traders can read a

You do not need market knowledge, if you are new to trading or investing. All you need to know for targeting price is in this book.

- Use of moving averages
- Use of fundamentals
- Use of Astronomy
- Use of Astrology
- Use of Cycle Analysis
- Monthly Subscription Service
- The news
- Trading Rooms & Online Trading Chat

All the above is not needed for targeting price. They are just a distraction. Although you can use them particular Astronomy and Astrology for price and timing.

Just draw a few lines on a page and make some calculations and due to that this comes under Technical Charting. However you are not looking for a heap of different patterns you are looking for just a couple at the start of a trend.

If you are a trader and just want to skip the background information you may wish to go straight to chapter four may I suggest however you take the time to read this properly. I say that because I know traders can read a

trading book of 250 pages in a couple of hours (I certainly have done). But this book is different. In this book you have the truth, the answers of targeting early and precisely!

There are a few scriptures in this book, as I said I studied to know the Truth about how the markets truly move and I have put that Truth in this book. I was going to have two books, one with and one without the Scriptures, but why should I leave out the maker of the Law of Vibration and Harmony which the markets adhere to? God is the only one who showed me the Truth and here it is and from that Truth you can make a few fortunes. You now have the knowledge in your hands to learn and trade safely and profitably from day one for less than \$40.00 USD for e-versions and less than \$100.00 for a printed version.

This book will save you millions and, if you lost millions, explain how you get them back and re-grow them really, with safety.

The rhythms of the markets can be drilled down, if you will, to Circles, Squares and Triangles. In this book we focus on the triangle rhythms the **No 1 Market Top Secret**. The Tri-Rhythms and in short (TriRs) which start at the cornerstone that the builders rejected when finishing off the Pyramid.

However there is a triangle or two before that one. We start with the first triangle ever in chapter one.

# Chapter one – Triangles

Let's start with the first triangle and to do that we need to look at two scriptures to know the truth, and the truth shall set us free (in the case of this book to trade profitably and wisely).

John 1 King James Version (KJV)

*In the beginning was the Word, and the Word was with God, and the Word was God.*

Genesis 1 King James Version (KJV)

*In the beginning God created the heaven and the earth. And the earth was without form, and void; and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters.*

So we see that in the beginning were the words 'Jesus the Christ, God and the Holy Spirit'. This is known as the Holy Trinity.

These three are one: God the Father. Jesus the God (son of God) and God the Holy Spirit and so we have our first Triangle if you will - drawn as follows:

**Trinity Triangle.**

# Chapter one – Triangles

## Drawing 1.0 Trinity Triangle

There, in the beginning of time, they are one. I am not saying God is a triangle but rather just an illustration for you of the importance of the rhythm of the Triangle. In the beginning is the Holy Trinity and these three are one. This is confirmed in the following scripture

1 John 5 v 7 King James Bible (Cambridge Ed.)

***For there are three that bear record in heaven, the Father, the Word, and the Holy Ghost: and these three are one.***

We have the Golden Triangle if you will.

# Chapter one – Triangles

The next Triangle to look at is on Earth and is the only existing wonder of the seven ancient wonders of the world. That is the Great Pyramid, which some call the Pyramid of Geza or the Pyramid of Kufu.

*In that day shall there be an altar to the LORD in the midst of the land of Egypt, and a pillar at the border thereof to the LORD.* Isaiah 19v 19 KJV

Pyramid Triangle

# Chapter one – Triangles

**Picture 1.2 Pyramid**

Without going into the techniques and how it was probably built with an inside passage, the triangle has

four sides on a square base and one can draw a circle around the base that would touch the four corners. There you have Gann Logo's Triangle in a Square in a Circle. In this book, **Market Secret No 1** we will just concentrate on the Triangle.

The Pyramid Cornerstone was rejected by the builders  
Psalm 118 v 22-25

***“The stone the builders rejected has become the cornerstone; the Lord has done this and it is marvelous in our eyes. The lord has done it this very day let us rejoice today and be glad. Lord, save us! Lord, grant us success!”*** NIV

To me, that should be the prayer of every investor and trader. You may laugh out loud with that comment, but **I am going to show you the cornerstone of trading will get your success rate over 95% and with a little practice over 99%.**

# Chapter one – Triangles

**Drawing 1.1 below Pyramid lines**

You will notice that there are nine lines to the Square, Circle and Triangles. Four triangles to the square, one square to the circle. Looking at the pyramid from the apex (top) you can count the lines - four lines for the triangles four lines for the square and one for the circle with the square touching the circle at four points.

The number nine is a rhythm and is very important in targeting the markets. In fact without nine you cannot target very well in the markets. I will expand this idea further in chapter three.

## **Triangles in the Heavens**

# Chapter one – Triangles

Let's look a little deeper into the Triangle and turn our focus on the heavens. We find that there is a star formation called the Triangulum Australe.

The Triangulum Australe is a small constellation in the far southern celestial hemisphere.

<sup>1</sup>Its name is Latin for 'the southern triangle', which distinguishes it from Triangulum in the northern sky, and is derived from the almost equilateral pattern of its three brightest stars. It was first depicted on a Western World celestial globe as Triangulus Antarcticus by Petrus Plancius in 1589, and later, with more accuracy and its current name, by Johann Bayer in his 1603 Uranometria. The French explorer and astronomer Nicolas Louis de Lacaille charted and gave the brighter stars their Bayer designations in 1756.

---

<sup>1</sup> Information from wikipedia

# Chapter one – Triangles

## Chart 1.0 Trianguim Australe

Chart courtesy of Stellarium the charting programs is free and can be downloaded from [www.stellarium.org](http://www.stellarium.org)  
The chart of the next page is the **Arabic Star Triangle**.

## Chart 1.1 Arabic Star Triangle

<sup>2</sup>The Arabic Star charts were written by Abd al-Rahman al-Sufi (Persian:) (December 7, 903. Rey Iran– May 25, 986. Shiraz) who was a Persian Astronomer also known as 'Abd ar-Rahman as-Sufi, or 'Abd al-Rahman Abu al-Husayn, 'Abdul Rahman Sufi,

---

<sup>2</sup> Information from Wikipedia

# Chapter one – Triangles

'Abdurrahman Sufi and known in the west as Azophi. The Lunar crater Azophi and the Minor planet Alsufi are named after him.

Al-Sufi published his famous *Book of Fixed Stars* in 964, describing much of his work, both in textual descriptions and pictures.\*

God's Word Translation 2000 Psalm 147 v 4 KJV

***He determines the number of stars. He gives each one a name.***

As God has called them the stars, the names they have, and he named one of them Triangulum Australae, then it is reasonable to assume that the triangle is very important. I mean think about this, the effort, and energy to make the stars, place them in a certain place in the Heavens, and keep them there on an ongoing basis for our benefit. Just to help us understand how powerful the triangle is if we use it for our benefit. There are other stars named:

1. The Octans (a navigation instrument),
2. The Horologium (clock) indicating you can use the Stars for Measuring time.
3. The Circinus an instrument to draw circles or draftsmen compass.
4. Norma Latin for Normal or right angle.

# Chapter one – Triangles

5. The Reticulum Its name is Latin for a small net, or reticle—a net of crosshairs at the focus of a telescope eyepiece that is used to measure star positions.
6. The Pyxis Its name is Latin for a mariners compass.

Making a total of seven stars named after Instruments for the Measuring and Calculating time and space.

**The Triangle is incredibly important.**

## Hexagram Triangles

A hexagram (Greek) or sexagram (Latin) is a six-pointed geometric star Figure. It is two triangles overlaid. It is also the insignia for Israel and called the Star of David (King David of Israel).

### Drawing 1.2 Hexagram

# Chapter one – Triangles

The Pentagon Triangles falling from the sky!

What is interesting, when you think of the pentagram (5 pointed star) and snowflakes is that, until recently, it was said that no two snowflakes are the same. However we now know that is incorrect because Jim and Penny Caldwell recorded Pentagon Snowflakes in the Kingdom of Saudi Arabia back in the early 1990s. Below is a link address to their website and video. Although the underlying crystals shapes may differ, but to our eyes and human vision capabilities they are all the same.

[http:// splitrockresearch.org/ content/109/Video\\_Clips /Snowflakes](http://splitrockresearch.org/content/109/Video_Clips/Snowflakes)

## ***The Music Triangle***

The triangle that makes musical rhythms. As you can now see triangles are everywhere and for good reason.

# Chapter one – Triangles

**Picture 1.4 Musical Triangle**

**Picture 1.5 Chimes (Triangle)**

I think we can say that God has ensured that we know about the triangle and shown us it for many reasons and in the case and reasoning of this book to be profitable when trading and investing.

With Picture 1.5, how often do we see that shape in the markets and the closer to the apex the more likely the triangle is to fail and the market or market(s) reverse.

In Drawing 1.2 the Hexagram is a four-dimensional body, however that is hard to see because it is drawn on a two dimensional surface.

Just like charts on the markets - they are moving in four dimensions but only draw on two dimensions, making the four dimensional shapes drawn very difficult to see.

# Chapter one – Triangles

Why is the triangle reliable and repeatable in human movements such as the stock market Triangle Rhythms (Tri-Rhythms)?

Ecclesiastes 1:9 The Message (MSG)

***What was will be again, what happened will happen again. There's nothing new on this earth.***

Including wrong viewpoints, descriptions and assumptions. Which will become very evident later in this book.

The above scripture is very important in the markets, as the patterns that the markets draw in four dimensions which we see on a two dimensional chart and the cycles (as well) or more correctly rhythms repeat themselves over time.

The lower the time frame the more often they repeat. There is nothing new under the Sun, which makes the Tri-Rhythms work and work with amazing accuracy.

It is a Rhythm. It is Vibration. Sound Rhythms. Vibration Rhythms or Vibration (al) Rhythms. This is very important.

Genesis 1 v 2 -3 KJV

# Chapter one – Triangles

*And the earth was without form, and void; and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters.<sup>3</sup> And God said, Let there be light: and there was light.*

We see that first there was ‘vibration’ as the spirit of God moved v 2 and then God Spoke in v 3. The first thing that happened after God had obviously planned out Eternity for the victorious is, VIBRATION. As the Spirit of God Moved!

As it is sound it is therefore a rhythm, with sound you can have quantum energy and there is quantum energy in the markets accordingly to Bradley F. Cowan.

In this book we do not take into account the time portion that the markets take to get from its start of its Tri-Rhythms to the end of its Tri-Rhythms.

The concept of applying the Pythagorean Theorem to price and time simultaneously was discovered by Bradley F. Cowan, according to him. He has copyrighted this as is PTV - Price Time Vector.

This book focuses on price and point targeting and a method of targeting not covered by anyone to our knowledge before this book. W.D. Gann who in 1908 had a verified / audited success rate of 91% said himself within a circle is a square and a triangle. Surely one

# Chapter one – Triangles

would recognize that more than one standard calculation formula is needed.

More than one formula is needed to be correct more often than three to four points of the square or circle. As we saw with the pyramid, the square only touches the circle at four points.

Hence God did not just name a star or group of stars a triangle, but also names of stars for compasses and navigation and drawing circles, and therefore more than a Fibonacci calculation is required.

If you drill it down to a Fibonacci number only you are talking about being average only - exceptional traders are not average traders. Also, others have noted there are times the market is moving in Squares or Circles. A Rhythm is the right description. Cornerstone Targeting, Triangular Rhythms (Tri-Rhythms) are the focus of this book, **No1 Market Top Secret**. Markets moving in Triangles is nothing new, but how to use them for targeting to an accuracy of up to 100% sometimes and quite often is new.

In this book we are looking to be more accurate - up to 100% accurate at times but mostly over 95% accurate - and when you practice over and over you will hopefully achieve over 99% accuracy.

# Chapter one – Triangles

We want to do this, after all everyone wants this. In this book we will show you how. Without the need to watch the screens for hours on end, without reviewing 'fundamental' data, without checking indicators, moving averages and the like and imagining four dimensional shapes (pattern recognition). Been there, done all that and none of them work simply, and *Keep it Simple (your name in here)* is the best, easiest, and the most time freeing way, allowing time for other activities.

When I watched the screens for hundreds of hours, and said and asked, "how, does the market know where it is going in advance"? It has to abide by God's laws it is operating within the Universe and therefore has to comply. It must have a targeting system. It cannot be random because God said he would teach us to profit and he cannot do that if it is a random outcome! I mean, who can teach who, what, if the outcome is random – it is impossible.

I would say and ask him 'Lord, what is it? Why does it move in this way or that way? How does it know where it is going before it gets there?' I said to God, 'You say it's the financial beast in the Book of Revelations and you know all things, therefore you must know how this works. Please show me. Around that time I said, under the Elliot Wave Model,  $C = A$ . But  $C = A$  only sometimes. **Why?** Then asked myself **Why? Why?** Again and again, **WHY?**

# Chapter one – Triangles

After all when you want to go on a trip you find the destination that you want to go to and then map out a course. Not all trips are  $C = A$  It would be pretty boring life if they were.

I asked him why so many times I think he let me have the answer to shut me up!

On the Si-Fi Series StarGate, as the character Daniel Jackson explains, you need seven points to map out a destination of star travel; six for pinpointing the target and one for the point of origin. Seven in total for a targeting minimum but there are nine in drawing 1.1.

Don't worry, it's not that complicated. Interestingly though, when they wanted to go further they needed eight points and then nine for Stargate Universe. The number eight in Bible numeric(s) is the number for Lord Jesus, and he is the door and the light. Seven is the number for finality (i.e. 7 days per week). Eight beatitude's of Christ, you do not get to number nine unless you been through number eight first. Number nine being the final destination.

It is no different in the markets and the rest of the Law of Vibration & Harmony.

However the seven major points (Tri-Rhythms) and two minor are in the markets in every set of Tri-Rhythms. The minor two TriRs make up part of the first TriRs and

# Chapter one – Triangles

are the cornerstones however, when included, you can work out in days where the market is going in a bull market for five years or more. Sometimes in a bear market as well, but as bear markets last for shorter time spans in general, then the time period is shortened for projections, but not the overall number count.

In goal setting, you set the goal, do some work and things fall into place for you to achieve the goal. God makes it easy for himself and for us by putting in place the Law of Vibration and Harmony. Goal setting and the achievement of the goals would not work without the Law of Vibration and Harmony, **(the outcomes would be random)**. The markets set the goals, as you will see. All you have to do is identify the projection and multiply it out and then trade it. NO:1 Market Top Secret shows you how.

You trade in the direction the market tells you it is going, calculate the 'M' Magnitude of the destination points you are wanting to trade, then you take action and execute the trade. All you have to do, once the trade is current or in play, is wait and watch the market get to the point its "(5 M Tri-Rhythms 2 targeting TriRs and 2 Cornerstone TriRs. 9 TriRs in total)" ("M" is the Magnitude of the movement you calculated) target where it told you it was going in advance.

Another important point is that the Market sets the destination. **YES, THE MARKET SETS THE**

# Chapter one – Triangles

**TARGET!** You do not set the target, the market sets the target, you just have to assess part of the rhythms, calculate the Magnitudes, set and execute the trade and watch the market get to the targets it set. You see, it is not random!

If you trade other than intraday you will not even have the daily routine of checking the markets to make a profit because the projection also gives an approximate time frame. The drawing in 1.2 is the Hexagram which also can be in the markets whirling Triangles (as the Hexagram turns).

Many people mistake calling a double or a triple top, when really what they are seeing is whirling triangles. If you don't believe me turn the Hexagram on its side. Double top - Double bottom is what you will see. In this book we are not concerned with timing the market, although it may be desired, we believe there is a simple approach if you are correct and including if you are trading intraday.

I can time the market down to a four-minute window. The study and application of the knowledge is immense. I will show you a simple way to estimate the time component. You can trade the hard time consuming way or you can do it a simple way and free up your time. In this book I am just showing you a very quick easy way to trade VERY profitably with the greatest of ease. You can always do the in depth study as you go. I

# Chapter one – Triangles

am showing you what most I estimate (99.%) do not know and I am showing you how to do it in seconds of your time and trade profitably from day one of your trading.

A Quote from W. D Gann from his book *Speculation: A Profitable Profession*. 'A Course of Instructions on Grains', p. 1, paragraph 4,

***'When you learn the rules and follow them you eliminate trading on Hope, Fear, and Guesswork which is nothing by gamble and you cannot afford to risk your money gambling. You must follow mathematical rules which I have proved to be a realistic guide in trading You must prove to yourself that the rules have always worked in the past and they will work in the future. When you have the proof follow the rules and you will make speculation a profitable profession.'***

In intraday trading, particularly futures, the trend may change a few times a day and the lower the time frame, the more frequent the change in trend. This is because the markets move in mathematical rhythms and that is what we are focusing on.

The rhythms must move in mathematical rhythms but they change in pitch or depth or height and time just like sound rhythms in a music piece or a song. Therefore there are smaller Rhythms or Tri-Rhythms on lower

# Chapter one – Triangles

time frames that make up the larger time frames and then larger Tri-Rhythms on larger time frames right up to centuries & 1000 years into Eternity and down into Eternity (ever smaller time frames). It's a bit like the snowflakes one small one is a factual of a larger one.

When we drill down to the intraday time frames you can find triangles all the time and it is the Tri-Rhythms of the general overall rhythms that we are focusing on. In schools the Pythagorean Theorem is taught in geometry classes and it states that the sum of the squares of the sides of the right triangle is equal to the square of the Hypotenuse.

We are going to use this triangle rhythm “Tri-Rhythms” to work out the distance in points of the index or whatever you are trading will move by. Pythagoreans called the vibration of the Word (God’s Word) – “the music of the spheres”. Pythagoras understood creation to be based on sound and music and he used geometry as a language to express it.

We are going to use very basic geometry to make profits and be safe at the same time. I have not written this book as a textbook, or am trying to be a great author, I am not cut out for those types of achievements, nor am I trying to ram God down anyone’s throat. I have written this book more as a conversation and demonstration of **how the NO:1 Market Top Secret enables you to target with amazing accuracy.**

## **Chapter Two - Market Rhythms are Triangles**

In his book, Natures Law (1946), Ralph. N. Elliott goes into a little depth about the pyramid and says that from the Apex at the top (eight points) you can see eight lines. However, he has unfortunately forgotten something and that is that the ninth line is a circle touching the four corners of the Pyramid. Just because you do not see it does not mean it is not there as will be later proven by the displacement factor. See Drawing 1.1 Pyramid lines.

Within the pyramid is a calculation to square the circle. I will demonstrate to you that the Dow Jones Industrial Average has used nine Tri-Rhythms from the March the 6th, 2009 low and that is what the wave theory would call the Wave of Major Degree.

Wave theory says the markets move in what he calls waves - being five primary waves and three correction waves. I will demonstrate that there is actually nine Tri-Rhythms and three more on the correctional rhythms, making twelve, not eight. I will mathematically prove that the wave theory or principle system is insufficient. The focus of many on the Fibonacci number sequence is not quite right when using the divisions of the circle as in Triangles and therefore Tri-Rhythms of the markets.

If there are nine and not five rhythms (not including the correctional rhythms)  $(5/9) = .55$  or 55%. It is

## **Chapter Two – Market Rhythms are Triangles**

impossible to make money if you are only right 55% of the time. Now, even if you discounted the Minor TriRs

and had the ratio of (5/7) (remember we are only talking about the primary (impulsive) Rhythms of the markets) the  $(5/7) = .71$  or 71%. It is still very hard to make money, being only 71% correct. The author considers 71% correct, or 29% wrong before trading, too much to waste hard earned money on a 71% possibility.

Although he (Mr Elliott) counts nine in some places he discounts them, and basically disregarded or rejected them in a mathematical sense.

Let me repeat that I will demonstrate there is actually nine primary or (impulsive or Major Degree as wave theory calls them) Tri-Rhythms '7 Major and 2 Cornerstone' not including the correction rhythms which made it 8 for wave theory for me it would make it 12 and completes the circle and under Gann it is the square of 12. See Drawing 1.4. The next number being 13 is a Fibonacci number. Which is basically, a number warning of change, (a new start) which is why people do not like it. Changes happen at number 13.

Another reason this is important is that Jesus chose 12 apostles. Luke 6 v 13.

## Chapter Two – Market Rhythms are Triangles

*And when it was day, he called unto him his disciples: and of them he chose twelve, whom also he named apostles.*

If you look closely at Jesus's life on earth it was all squared out, all made right and all of it numbered. I am going show you how to apply the Hypotenuse of Triangle Rhythms (Tri-Rhythms) only for price and show you how easy it is when our Technology is easily understood to trade profitably.

### **Drawing 2.0 Circle, Square & Triangles Sq by #12**

We will use the Cornerstone Triangle Rhythms (Tri-Rhythm 1-4) to project with pinpoint accuracy where the market is moving to in price.

## **Chapter Two – Market Rhythms are Triangles**

With the Cornerstone Targeting technology - Triangle Rhythms (Tri-Rhythms), I will show you how it works on the Sydney Price Index on the DOW JONES and other Major indexes. Using Data from Interactive Brokers Data and Charts from Market Analyst, also how it works, using such companies as CMC Markets.

What we are showing you is simply incredible, whilst being very simple to understand. My experience with the largest companies in the world was very disappointing.

Time after time the consultants would say things on their subscription service writings and updates like ‘that caught me off guard’ or ‘I did not expect that to happen’.

Three years ago I said to my then clients that it was not a true heads and shoulders pattern as an ending pattern on the DOW JONES Industrial index. It was going to be three drives to a high pattern, which has come true, It was not a Head and Shoulders pattern that some people said it would be for a decade before. Guessing!

I am showing you a way to work with the Rhythms God has put in place and how to use them simply for pinpoint targeting without guessing. No scatter-gun technique, rather a sniper approach and hit the target usually with

## **Chapter Two – Market Rhythms are Triangles**

greater than 95% accuracy. I will prove it with mathematics. After all, God said all things are numbered. Even the very hairs on one's head are numbered.

The good news is I have invented a way. A marvelous way, a simple way, a way that requires very little study and a way that requires only a little practice and adjustment for what you are trading on. In just after a few months of intensive study, plus all the readings, DVD's etc. I had done previously.

As I said, I would sit in front of up to 19 screens. I had them all displaying market charts at the same time, and I would say to myself many, many times, while watching the patterns, the market must have a targeting system. I said it cannot work without one.

God showed it to me. I asked him to show it to me. That is good news for you as you are now reading the know-how of a very simple repeatable mathematical law of God to make incredible profits.

Why is it that I can know the end at or near the beginning? It's simple, really. Here is what the bible says about it.

## Chapter Two – Market Rhythms are Triangles

Ezekiel 21v 30. KJV "*Shall I cause it to return into his sheath? I will judge thee in the place where thou wast created, in the land of thy nativity*".

This highlights that your end is known at your very beginning - even before your birth really. But at the time of birth, the starting point, certain things are known. It is the same in every market. The end is known at the beginning. We must however have the first Cornerstone TriR to commence targeting calculations.

To show you this, and how I am so accurate now, I must first clarify a few points regarding wave principle.

In the model I have invented and discovered, I have nine Tri-Rhythms seven Major Tri-Rhythms and two minor (Cornerstone Targeting and Trajectory Rhythms) making nine Tri-Rhythms in Total. The same as the pyramid triangle, square and circle. However, I discount the minor Tri-Rhythms and discard (as far as having them drawn on the charts) them after I have used it for two reasons.

1. They give me the targets for the first set of Major CT Tri-Rhythms and;
2. Space on the charts!

# Chapter Two – Market Rhythms are Triangles

There is no use for them once they are past.

You could argue that a wave is a rhythm and try measuring it and using it for targeting.

As I have shown mathematically above, 55-71% accuracy is not enough for me. If the wave principle has five waves in its model (discounting the AB and AabcB) in his 'Major Degree Bull Market' on page 14 of the book *Natures Law*, I am showing you I have nine Tri-Rhythms in my model and I can therefore use it for targeting accuracy of over 95% and use with confidence, reliability and peace of mind when trading.

I have not copied wave theory or principle model for one simple reason; **I could not get it to work** most of the time - in fact almost all the time mathematically. If it had worked I would not have lost, and nor would millions of others, lost millions and billions and probably Trillions over the years and sometimes much more.

I was looking for pinpoint accuracy and I have discovered and invented the processes.

## Chapter Two – Market Rhythms are Triangles

By drawing two extra lines on to the standard drawings that the markets leave you (whether they be line or candlestick charts etc.,) have a triangle and therefore a Triangular Rhythm – Tri-Rhythms. I have shortened it to TriR for brevity.

Psalm 19 v 7 KJV *“The Law of the Lord is perfect”*

Now think about this - if the Law of the Lord is perfect and all things in this universe are controlled by the Law of Vibration and Harmony and all things are numbered (even the hairs on your head as we now know that through DNA) (Luke 12 v 7). If we also know that God said he would teach us to profit (Isaiah 48 v17), therefore the **markets cannot be random**, seeing as the markets are numbered, they can be targeted with great precision.

In fact, you could get it right 100% of the time if you were perfect but we know only God, Jesus and the Holy Spirit are perfect so we mere mortals are subject to less than perfect outcomes, because we think less than perfectly. However I have shown and will teach you that you can obtain a 95 %++++ accuracy. All you have to do is follow the numbers - **the numbers that are controlled by the Law of Vibration and Harmony.**

## Chapter Two – Market Rhythms are Triangles

That is the problem with wave theory or principle model. It does not follow all the basic numbers. It is the same with indicators, fundamentals, moving averages and pattern recognition – They don't follow or predict the numbers, they record them after the fact for the most part. In truth, Mr. Elliot, with all due respect, was a pattern chartist. **He discovered some patterns and he labeled them.** If he went the one step further and proved them by mathematics it would have been a more tremendous discovery and invention.

If you want to make money, big money in the markets you need to know where it is going in advance to place the trade on at the right time and take it off at the right time in whatever direction the market you are trading is moving.

It should also be noted that it is not five TriRs it is nine. (remember Stargate) 1c +1t + C1 + T1 TriRs plus 5M TriRs making nine up or down 'M' Magnitude TriRs. Nine TriRs including the Trajection TriRs patterns leave out number nine to the outside of the circle and you have eight, Five gets you to the square and 1-12 squares out of the triangles, Square and Circle. See drawing 2.0.

## Chapter Two – Market Rhythms are Triangles

Therefore we have:

'c' or "C" for "cornerstone" TriRs, minor 't' and 'T' for trajectory TriRs and 1,2,3,4,5 'm' or 'M' for magnitude TriRs 'ctm' and 'CTM'.

Therefore we have:

<b>c</b>	<b>= cornerstone</b>	<b>TriRs</b>
<b>C</b>	<b>= Cornerstone</b>	<b>TriRs</b>
<b>t</b>	<b>= trajectory</b>	<b>TriRs</b>
<b>T</b>	<b>= Trajectory</b>	<b>TriRs</b>
<b>m</b>	<b>= magnitude</b>	<b>TriRs</b>
<b>M</b>	<b>= Magnitude</b>	<b>TriRs</b>

'm' or 'M' TriRs must have five TriRs in them also.

'c' or 'C' TriRs must have 2 TriRs in them also.

't' or 'T' TriRs must have 2 making a total of 9 TriRs.

This makes  $1c + 1t + C1 + T1 + 5 M's = 9M$  TriRs in Total. This is the case for all TriRs. even on the very smallest of Rhythms.

In other terms:  $9M = 1c + 1t + C1 + T1 + 5 M's$ .

Whatever the Rhythm, including the two minor ones that are in focus only a very short period of time even on the Major Tri-Rhythms! TriR's 10,11,12 square out the Circle 12 in total.

## Chapter Two – Market Rhythms are Triangles

Trajectory in the Thesaurus can also mean, Curve, Arc Route, Course, among others however I think Arc and Curve fit best when one considers Drawing 2.0

Trajectory in the Dictionary:

tra·jec·to·ry [truh-jek-tuh-ree noun, plural

tra·jec·to·ries.

1. the curve described by a projectile, rocket, or the like in its flight.
2. Geometry . a curve or surface that cuts all the curves or surfaces of a given system at a constant angle.

tra·ject truh-jekt verb (used with object) Archaic.to transport, transmit, or transpose.

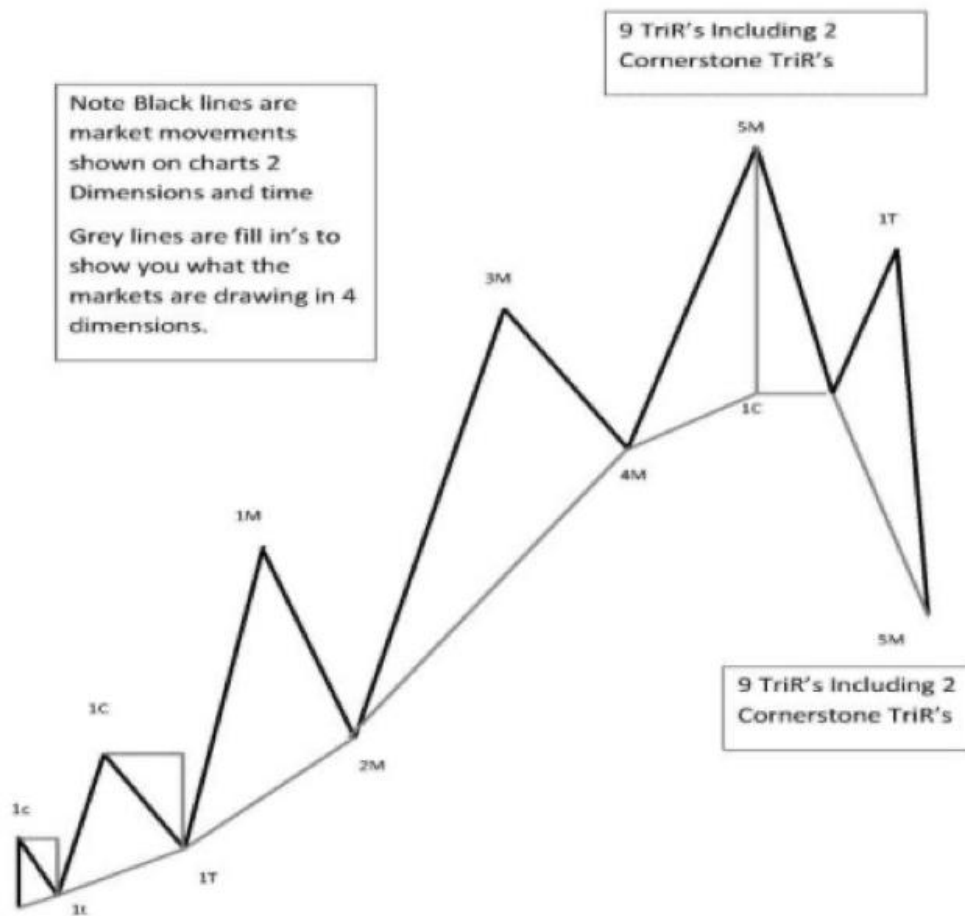

Origin:

1545–55; <Latin trājectus (past participle of trāicere to cast, throw over or across), equivalent to trā- (variant of trāns- trans-) + -jec- (combining form of jacere to throw) + -tus past participle suffix.

I like that to throw across, when you look at the drawing in 2.0 that is what it looks like.

### Drawing 2.1 Uptrend

# Chapter Two – Market Rhythms are Triangles

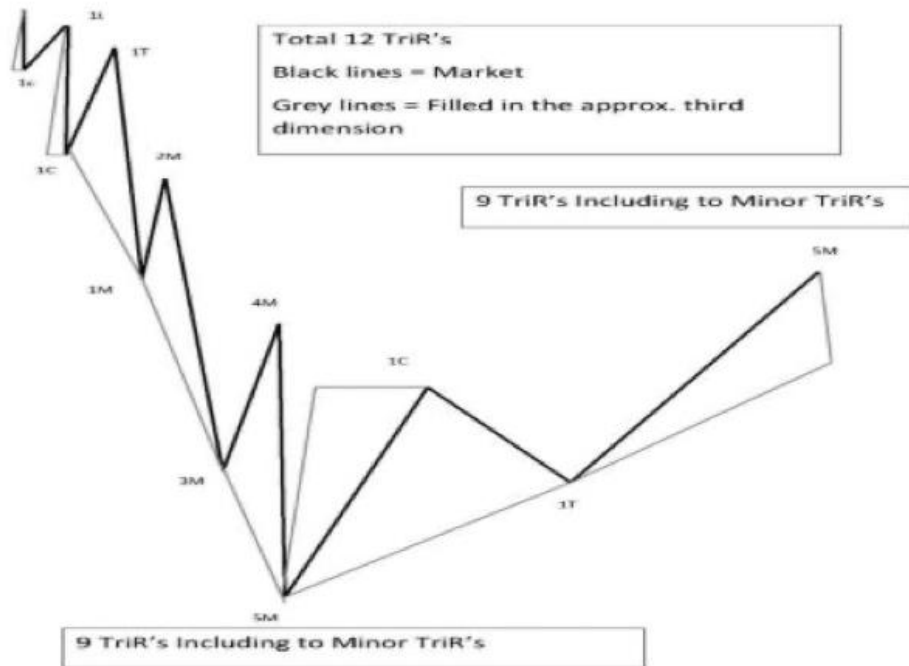

Drawing 2.1 Over view of Major moves on a daily, weekly or Monthly time frames and above and below down to tick charting.

NOTE: the light grey lines are the lines I put on my charts. The Black lines are the points the market has made, I am simply making it easier to work with and understand the four dimensions it is drawing on the two dimensional charts.

# Chapter Two – Market Rhythms are Triangles

Tri-Rhythms DOWN Trend on the next page.

## Drawing 2.1 Tri-Rhythms Down Trend

Notice I have drawn extra grey lines on the down trend, these should be drawn on both directions as this helps in understanding the basic geometry for targeting. You will see the Author do this later in this book. I have also left off some of the Tri-Rhythms for brevity reasons.

With my method you don't need to know what the pattern is be it zig zag, inverted, doubles and such like. WHY? When you know the target who cares about the pattern? Do you really care about the pattern or how to

## **Chapter Two – Market Rhythms are Triangles**

make the money? However one may find it better to know the pattern.

If you care about the pattern you are either trading a time conscious product or you are trying to trade every trend. Which you can do with what I am showing you.

Doing that you would be intraday trading or almost. I prefer like a lot of previous clients to spend most of the day doing something else and give making money the priority it deserves, which is less than 8 hours a day much less, especially trading in the markets.

A daily bar or candle might have either trends a couple of times or more on a really volatile trading day. That is what one must look for when trading futures or Options for Speculations, trading companies that mimic the indexes, because these “indexes” operate 22-23 hours a day, and any typical day that long may have both up and down trends in the day. This is why they (what Jesse Livermore called bucket houses market makers) make so much profit – you get whip lashed almost every day.

If you apply what I am showing you, it will help and probably almost eliminate the whip lashing. But you are the one that must change, become more patient and less emotional as well!

## **Chapter Two – Market Rhythms are Triangles**

It becomes important to know exactly where the turn is about to be made in point or Dollar or Pound or Euro value or whatever currency domination you trade in for the time frame you are trading.

If you can know it in time value all the better, however I find it just good enough having the point value and keeping my trades small when not in front of my screens, that way I can put a trade on and have the computer take the profit when the index or stock it reaches its target.

I will show you a simple way to calculate time, although timing in this NO:1 Market Top Secret is not the focus of this book.

I have developed a way that illustrates the time component by drawing a couple of lines on the chart. The chart indicates PRICE and TIME TARGETING.

When one gets completely competent one could have the computer simply reverse the trade while they sleep, this however is for experienced traders.

Let's get going with Tri-Rhythms (TriRs) in Chapter 3.

## **Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR**

As you will see from the below in picture 3.1 you can count the triangular Rhythms. It is important to note that Triangular Rhythms are not always present on the higher time frames or so it would seem.

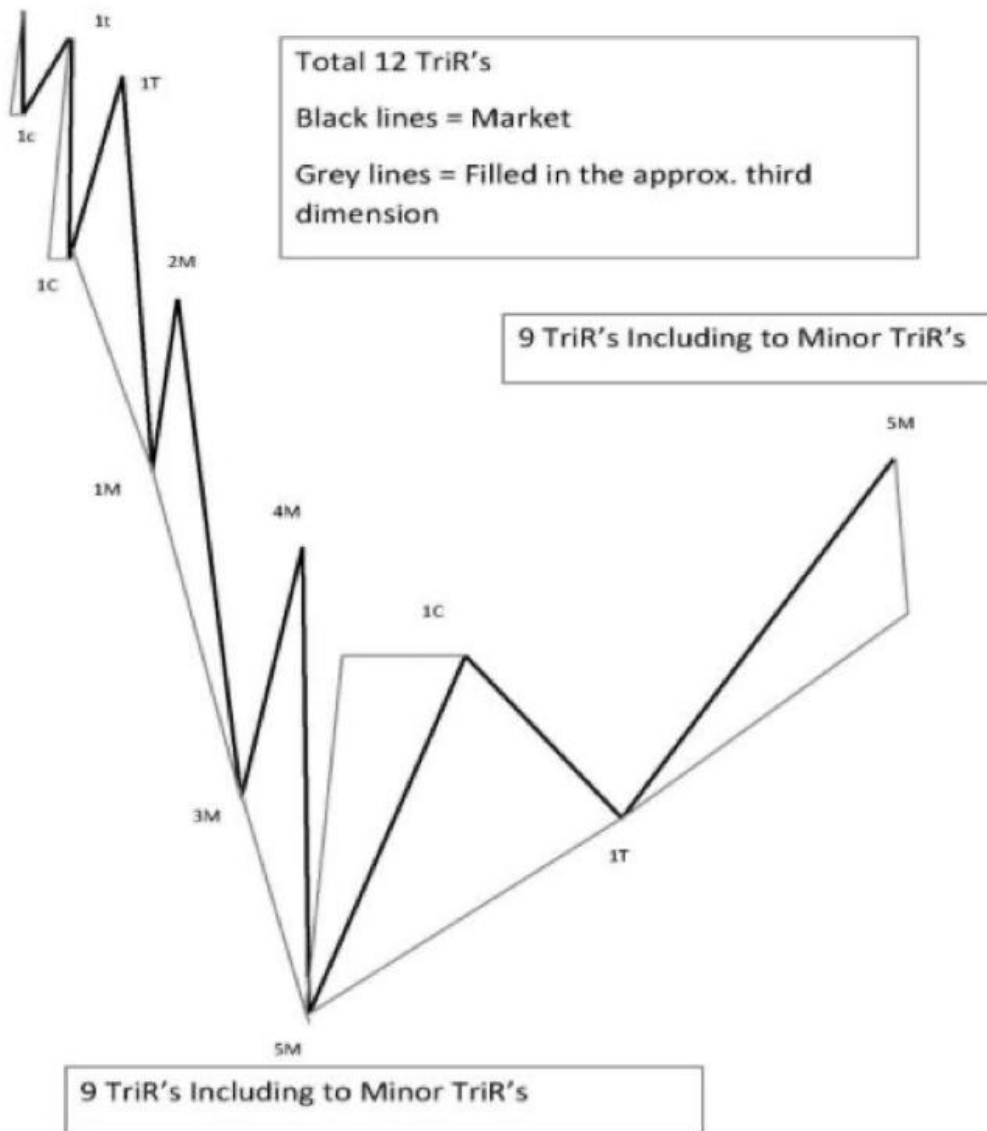

When one lowers the time frame one can count the triangular rhythms until the next turn – Note: the lower the time frame the more multiple Tri-Rhythms (TriRs) you have to make up the TriRs on the higher time frame. For example, if you have a daily candle chart you may have 7 TriRs up and a 'ctm' correction in that candle or you might have just part of the TriRs up and the next day on the exchange the index goes up again. When it has finished its TriRs up, an 'ctm' or 'CTM' pattern forms and this may be within the daily Candles, you may not see it. It is always advisable to go down a few time frames to find out where the market is in its TriRs and vice-versa.

If you cannot find a Tri-Rhythms patterns, go down time frames until you do. When one is proficient you can count the TriRs on a daily time frame without going to a lower time, particularly in Candlestick charting. In fact, it is quite easy when you know what you are looking for, particularly on candlestick charts.

Triangles Down Trend Drawing 3.1 on the next page.

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## Drawing 3.1 Triangles Down Trend

## Drawing 3.2 Triangles Up Trend

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

**WARNING:** Be aware that you should not be hasty in marking the triangle rhythms as finished. You may have the Tri-Rhythms count wrong. In other words, if you have the first two large Tri-Rhythms and then draw out a third small TriR's you probably have it wrong and are counting the Tri-Rhythms too quickly. It is highly probable that things will take longer than you expect.

Remember there are Tri-Rhythms within Tri-Rhythms. It is best always to have an alternate TriR's count operating where possible. I have found that by doing

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

this I have become a much better trader. One must be patient when labeling and counting Tri-Rhythms, as there are Tri-Rhythms within Tri-Rhythms – Wheels within Wheels and cycles within cycles.

The neat thing about this is that you're not just counting the Tri-Rhythms, you are watching the points and money value be it AUD, USD, EURO, POUND etc. Go to the targets the market has made and thereby you have the second reference point one needs. When one just counts the Rhythms there is nothing to test your counting against.

In the movie *Apollo 13* the Astronauts state (due to the onboard computer being off line) that when they had to make a course heading adjustment burn they needed at least two reference points. They got two, one via a manual instrument and the second by lining up Earth in a little triangular window. Therefore, if you have the target and then visually do the count you have the two references and, if they do not match up, the likelihood of you counting too fast is a high possibility.

One mistake I see traders make all the time is thinking the market is going to move much faster than it does. This causes them to hold losing positions when the trend has changed. Beware of the time frame you are trading on. For example, I have a 30 second chart on the screen.

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

Now I can count seven Tri-Rhythms up and a two tiny 'ct' TriRs making 9 TriRs.

Now I know that this only equates to, say 'C' TriRs up, for example. Then I would have the same for TriRs 1m, 3m, and 5m with T, 2m and 4m being CTM Trajectories.

Let's take a minute and look at this more closely in the light of the numbers, as, if you can prove it by numbers, then you know something of your science.

I am not into Numerology or Astrology (not the soothsayers part of it anyway). However, as it is part of the universe then Numerology and Astrology is governed by the Law of Vibration and Harmony and therefore is numbered.

That is where it comes together for me.

## Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

**Table 3:1 7's & 9's**

Number	TriR Name	Equals	7 TriR's	If 9 TriR's
1	1c	=	7	9

#### **Other properties of number 91**

##### **Symbolism Ref:**

<http://www.ridingthebeast.com/numbers/nu91.php>

Symbolizes the Christ exalted above the nine choruses of angels - 90 - when he went up to the sky, according to Thibaut Of Langres.  $90 + \text{Christ} = 91$ .

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

Numerology of number 117

## ***Properties of the number 117***

### **General**

A.D. Grad points out that the book The Song of Songs, in the Bible, comprises 117 verses, with 5148 characters and 1251 words, and that these numbers are all multiples of nine.

It is the number of constitutive elements (or atoms) of which our Earth would be composed, perhaps even at the solar level, according to the druidism. Raoul Auclair points out that when the Pope Paul VI went in front of the United Nations, 117 nations were present. And the Psalm 117 sings: "Praise Yahweh, all nations, extol him, all peoples".

### **Occurrence**

The number 117 is used 1 time in the Bible.

The number 20 is used 117 times in the Bible.

The word Sabbath is used 117 times in the Old Testament .

Ref: <http://www.ridingthebeast.com/numbers/nu117.php>

### **Other Properties of Number 117**

Is a Fibonacci number? **NO**

Let take a look at the number 144

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## Symbolism

- In the number 144, according to Fathers of the Church, the hundred expresses the Unit of the divine world (the Unit of God) 4 of the ten, the stability of the angelic world, 4 of the Unit, the eternal stability of the Holy City, whose form is precisely a cube.
- When several kinds of symbolic significance are contained in the multiples of a number, the symbolism of this number is consequently enriched and reinforced. This is why the number 144 is considered as very favourable because on the one hand we obtain by theosophical reduction  $9 = 1+4+4$  and that on the other hand we find among these 14 divider numbers 72, 36, 24, 12, 9 and 8 which are very rich in symbolism.
- When one adds the number of petals of the five inferior psychic centres, we obtain a total of 48 petals. By adding the 96 petals of the frontal centre we obtain the number 144, symbol of the perfect and expressed spiritual work, that is to say of the **marriage between the soul and the personality.**

## Bible

- Number of cubit that measures the rampart of the celestial Jerusalem. (Rv 21,17).

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## General

- According to Plato and Aristotle, there would be great changes in the cities every 144 years (square of 12) and there would be great changes in the history of the humanity every 1728 years (cube of 12).

NOTE: Half-life  $1728 / 2 = 864$  this is important as you will see further on

- The Graal comprised 144 facets.
- The traditional horoscope is summarized essentially with the 12 signs of the zodiac, but with the ascending, we obtain 144 possible divisions.
- The number 144 is told "abundant" since the sum of its dividers (aliquot parts) gives a result higher than 144:  $1+2+3+4+6+8+9+12+16+18+24+36+48+72 = 259$ .

## Gematria

- According to the Dr. Pr. Azoulay, the numerical value of "the Ancient of Days" (Dn 7,9) written in Hebrew, Kedem, gives 144.
- By using as correspondence table  $A=1, B=2, \dots, Z=26$ , André Bouguéneq found that, in French, "Le Verbe fait chair" ("The Verb made flesh") = 144. Also for "A la genèse de l'Homme" ("At the genesis

## Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

of the Man") = 144. It is the same with the French word "ordinateur" ("computer"). By using the opposite correspondence (A=26, Z=1) we discover that "Loi Divine" ("Divine Law") = 144.

- By using the correspondence A=1, B=2, ..., Z=26, we find that the French words "coeurs unis" ("united hearts"), referring to the united hearts of Jesus and Mary, give  $144=81+63$  as numerical value. It is the same for the sentence "La Sainte-Face de Dieu" ("The Holy Face of God").

### Occurrence

- The number 144 is used only once in the Bible.
- The sum of the occurrences of all numbers of the New Testament higher than 17 gives as result 144.
- The words language and prayer are used each one 144 times in the Old Testament.

### ***Properties of the number 144***

Is a Fibonacci number? **YES F12**

Drawing 3.3 Number Count of a complete Tri-Rhythms  
Overall trend on the next page.

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

**Drawing 3.3 Number Count of a complete Tri-Rhythms Overall trend**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## ***Properties of number 693***

In the drawing above 3.3 you will notice the number 693 in the table.

I could not find much on the number 693, but what I did find was significant in terms of someone's wealth. One should be very aware of this number indeed.

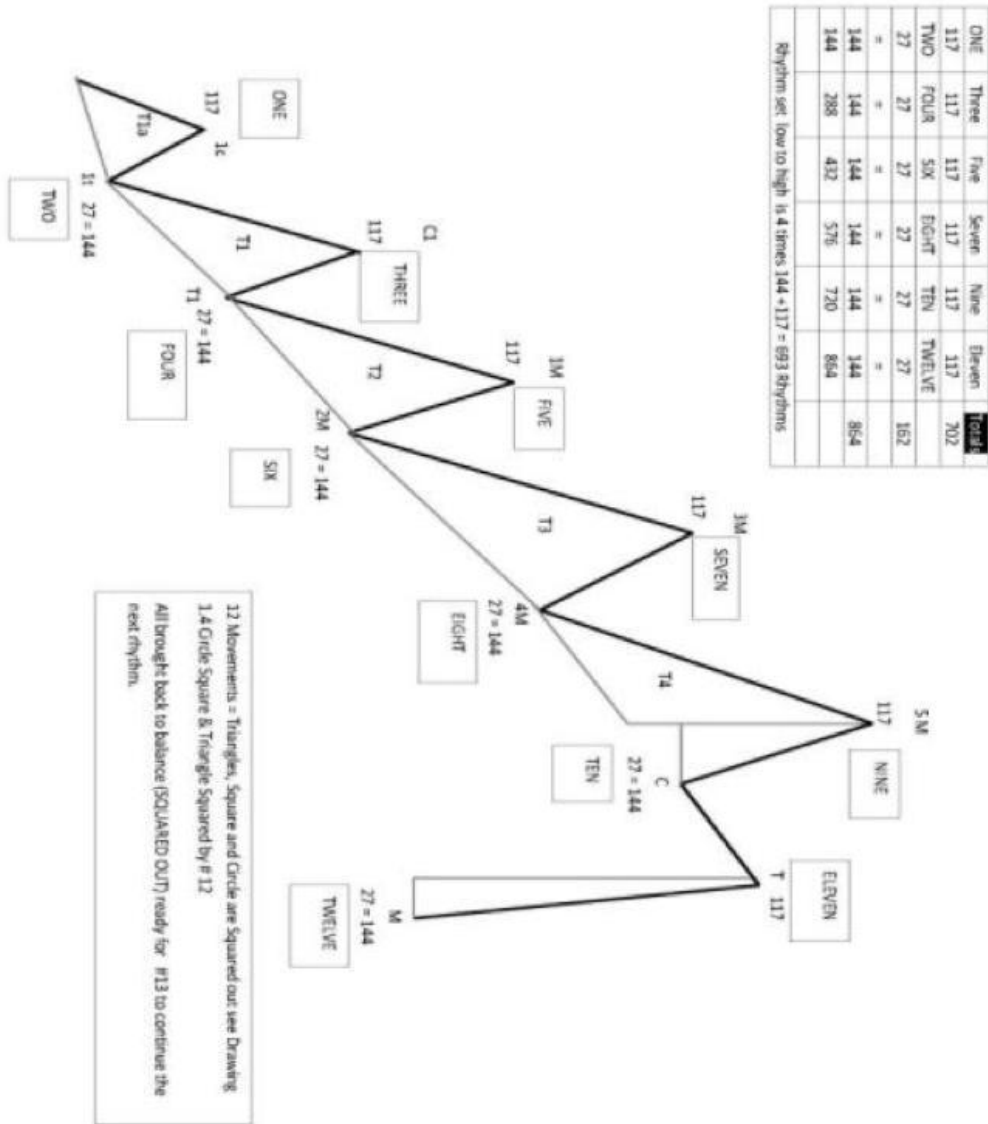

Esau was a son of Isaac brother to Jacob. Esau was the first-born and therefore was going to inherit the birthright and all the wealth of his father.

Genesis 25 v 29-34

Esau as a young adults he comes in from the field and, thinking "he was going to die as young people do", as he was so hungry, there was nothing in the fridge as it were and he could not be bothered cooking, may be he had been out for days hunting and returned with nothing to eat or offer. He asked Jacob for some lentils. Jacob said give me your birthright and the trade was done. **Hence Esau's financial decent began. Interestingly this verse is the 693<sup>rd</sup> verse of the bible.**

**Coincidence? Maybe.**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

**Drawing 3.3 Number Count of a complete Tri-Rhythms Overall trend**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## ***Properties of number 693***

In the drawing above 3.3 you will notice the number 693 in the table.

I could not find much on the number 693, but what I did find was significant in terms of someone's wealth. One should be very aware of this number indeed.

Esau was a son of Isaac brother to Jacob. Esau was the first-born and therefore was going to inherit the birthright and all the wealth of his father.

Genesis 25 v 29-34

Esau as a young adults he comes in from the field and, thinking "he was going to die as young people do", as he was so hungry, there was nothing in the fridge as it were and he could not be bothered cooking, may be he had been out for days hunting and returned with nothing to eat or offer. He asked Jacob for some lentils. Jacob said give me your birthright and the trade was done. **Hence Esau's financial decent began. **Coincidence? Maybe.**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

Haim Shore, in his book *Coincidences in the Bible and Biblical Hebrew* 2007 page 187 says that the Hebrew numeric of 693 is the word for sulphur.

Gofrit (sulphur): Hebrew value of letters

$$693 = (400 = \text{ת}) + (10 = \text{י}) + (200 = \text{ך}) + (80 = \text{פ}) + (3 = \text{ל})$$

Gofrit is sulphur both in ancient Jewish sources (like interpretations given for this word in the Bible) and in modern Hebrew.

Sodium , Sulphur , Lead - All three are pure substances (elements). Neter (or borit) is assumed to be made mainly of sodium (Na), the AW of which is 22.9898. Gofrit (sulphur) has an AW of 32.066. Finally, oferet (lead ) has an AW of 207.2.

Question – When the market reaches the number (high or low) being 693 Rhythms has it drawn or traced out the crystal structure of Sulphur?

## Properties of the number 693

Factorization  $3 * 3 * 7 * 11$  (add the factors  $3+3+7+11) = 24$  (2 Complete Tri-Rhythms) Divisors **Is a Fibonacci number? NO**

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

Notice 693 is not a Fibonacci number hence why when the market reverses from a high or low it falls short of the 1.618 number.

You need a different calculation to be correct on the projection of the Magnitude Rhythms. This is probably a very important point for the algorithm traders.

It is a number to be aware of you do not want to give up your wealth when the markets turn at a 693 Tri-Rhythms by holding short or holding on to shares with the perception that the markets always go up!

## ***Properties of number 864***

In the drawing above 3.3 you will notice the number 864 in the table. This is the number of Rhythms the markets have on a large degree or (major degree).  $6 * 144 = 864$ .

Now let's see what the number properties are for the number 864. Reference from [www.numberempire.com](http://www.numberempire.com)

Properties of the number 864

Factorization  $2 * 2 * 2 * 2 * 2 * 3 * 3 * 3$

Count of divisors 24 (2\*12)

**Is a Fibonacci number? NO**

Notice that the number 864 is not a Fibonacci number! This proves that by drilling down everything to a golden

## Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

number a Fibonacci number is the wrong thing to do in the markets. **One should not drill everything down to a Fibonacci or Golden number.**

### NOTE:

Out of the numbers shown above for the overview of a Tri-Rhythms, be they, 91,117,144, 693 & 864 as total numbers, only 144 was a Fibonacci number.

12 is not Fibonacci number

91 is not a Fibonacci number

144 is a Fibonacci number

693 is not a Fibonacci number

864 is not a Fibonacci number.

Therefore if you use eight (waves or Rhythms) and not twelve you have  $(8/12) = 0.6666$  recurring accuracy and chance to getting it right and that is assuming you do not make any mistakes.

$8 / 2 = 4$ , 4 times 144 equals 576. Using the above demonstration that it needs to be 864 to make a full and complete Rhythm  $(576/864) = 0.6666$  recurring.

Or if you were able to pick the highs and lows of the markets it would be  $(693/864) = 80.20\%$  chance of

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

being right at the very best. That's still a lot less than the 99.++++% method you are being shown in this book.

Did you notice the numbers above?

If you add the sum of 91,117,144, 693 & 864 it equals 1909.  $1909 + 104 = 2013$ . I thought I would just look up the year on a line chart for the DJIA Chart is on the next page.

**Chart 3.0 1909 DJIA**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

I found that very interesting. The market made a high of 100.53 on the 19<sup>th</sup> November 1909. A low of 53.17 on the 23rd December 1914.

Notice it has 9 Rhythms down, even back in 1909.

Let look at the basic Tri-Rhythms correct counts (My Way), In Drawing 3.4.

## Drawing 3.4 Correct Labeling and Counting

More descriptions labeling & Counting shown in FAQ.

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

Without the 'C' you cannot target correctly and I will show you later that if you can it is **without** pin point accuracy. With the 'c' 1,3,5m at times you can target the 'C', 1,3,5m and from there you can target the 1,3,5M (TriRs). Leave these 'c' and 'C' Rhythms out and you leave out 39% of the structure and prone yourself to errors.

Some may be able to get it to work, however I prefer accuracy of over 95% and with practice greater pin-point accuracy!

You now have mathematical proof that you must count the 1c, 1t, C1 and T1 before starting at Number 1M for the Magnitude Tri-Rhythms. If you do not, you do it at your peril.

You should now be able to see rhythm patterns much more easily.

Why are they rhythms?

## ***UNFORCED RHYTHMS***

Matthew 11:28-30

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

*The Message (MSG) 28-30 “Are you tired? Worn out? Burned out on religion? Come to me. Get away with me and you’ll recover your life. I’ll show you how to take a real rest. Walk with me and work with me — watch how I do it. Learn the unforced rhythms of grace. I won’t lay anything heavy or ill-fitting on you. Keep company with me and you’ll learn to live freely and lightly”.*

It is rhythms. The bible says so. Not satisfied with that answer? Then look to the stars. Do we see a wave counter or wave calculator? No, we do see a triangle for example or you see a star named after a right angle or triangle and so on!

When you look at the planets do they move in waves or rhythms? The markets move in rhythms. Rhythms of vibration!

It is the same as the whole universe. It vibrates, including our solar system, and those rhythms are the same as sound frequencies. You could say sound waves, however I think humans have mistakenly described them as sound waves when they should be described as rhythms.

I like that scripture “rhythms” help us have a more freely and lightly burdened life. Rhythms of Grace.

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

It is the same for trading. Are you tired? Worn out? Burned out on trading? Have you or your broker lost some or all of your money, are you now trying to do it yourself? Tired of using indicators? Tired of the moving and multiple moving averages, pitchforks and so on. Tired of trying to work out fundamentals?

If so, keep reading as within these pages are the right ways to calculate targets and use the Tri-Rhythms so the Markets show you to trade freely and easily without the stress and have a more lightly burdened trading life.

All we have to do is follow them (the Tri-Rhythms) to make money and protect your capital or (for many people) rebuild it. We should be a good steward of our money.

Luke 12:42-46 ESV

***And the Lord said, 'Who then is the faithful and wise manager, whom his master will set over his household, to give them their portion of food at the proper time? Blessed is that servant whom his master will find so doing when he comes.***

***Truly, I say to you, he will set him over all his possessions.'***

## **Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR**

This is a good Scripture. It even talks about when one should get paid 'to give them their portion of food at the proper time'. Now it is very hard to do this in expensive societies, but nevertheless, this manager was told, okay you can eat now and I will pay you your portion when you prove your performance!

If you have performed well I will give you more possessions to look after.

Often when I was trading, or when I was a financial planner, and it was someone else's job to trade, the clients would say 'Do well with that' or, if he (the broker or 'Market Specialist Adviser') had made me money, I would give him more to trade with, or they would say 'if he made me money I would not mind if he took 50% of the profits, but because he lost me my money, I will not give him anymore and sorry I must leave this company.

'You're okay Barry. You didn't lose me the money but these brokers are no good.'

I heard that so many times it was sickening. Both I and the trader would lose the client in the end. Hence my experience with most traders and brokers was less than adequate, and I was in the industry.

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

If we want to be great traders, make money or get your money back that your broker, trader or financial adviser / planner or bank lost you (or you lost you) then you just have to follow the Rhythms of Grace, the Tri-Rhythms. Triangular Rhythms starting with the Cornerstone Rhythms the builders and marketers of the **Wave Theory or Principle rejected.**

The cornerstone was never put onto of the Great Pyramid. It was rejected.

Psalm 118:22 NIV

*'The stone which the builders rejected has become the cornerstone'*

Matthew 21 v 42 NIV

*Jesus said to them, 'have you never read in the Scriptures "the stone the builders rejected has become the cornerstone, the Lord has done this, and it is marvelous in our eyes"'*

From what I can tell, W.D.Gann and the wave theory or principle never considered or considers the Cornerstone. Indeed, Gann said, in terms of the market squaring out, that all the little movements were where the market was squaring time and price as it seeks the center of gravity.

## Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

They both missed it, in terms of Targeting, in the markets that the smallest stone is the cornerstone and a very critical one. The Builders rejected it and the Christ. So much so that Jesus had to point this out in Matthew 16 v 18 KJV

*‘And I say also unto thee, that thou art Peter, and upon this rock I will build my church.’*

A bit of play on words here or so it would seem, but Jesus was pointing out that he was going to build his church on him, Jesus the Christ, and Peter would be the starting stone (as it were) when he received the Holy Spirit on the Day of Pentecost and spoke and converted 3000 that day. Whereas, only days before, he had denied the Lord three times. The Lord squared that out as well after he was resurrected on the beach he said to Peter three times, feed my sheep. 3 negatives (denials) + 3 positives) = ZERO – Squared Out!

It is the same in the markets. The cornerstone is what gives you the base (turned upside down for going up growth cycles and Apex for down cycles; as shown in The Hexagram Drawing 2.2.

Unfortunately, Wave Principle misses it. That is why it relies on volume so heavily to indicate when the market was and is turning. The cornerstones, the little “ct” and

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

larger “CT” at the beginning of the patterns that the markets used have been rejected and yet you can now use for pinpoint targeting.

Mr Elliotts Wave theory or Principal got it wrong, unfortunately, and I have demonstrated this in the numbers above, and proved it mathematically, some 84 years later (or one cycle of the planet Uranus around the sun). All things get squared out. All things are kept in balance, even in algorithm trading. This book is squaring out I believe, showing you the mathematically correct method/

## ***Algorithm Trading***

People, or talking heads, who say the algorithm trading is changing the markets, do not know what they are talking about. If anything, algorithm trading is adding liquidity to the markets in both directions! Seeing as they are adding money and therefore volume into the markets the markets are indeed easier and reliable to trade. I.e. less gaps up or down. Why? Well there is more money available to the market. An example of this can be seen in the 1987 crash. There was not any money available so the markets fell, and fell quickly, so much so they stopped the trading. In any

# **Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR**

event computers have to comply with the mathematical laws of the universe as well.

If the algorithm trading has changed markets then how is it that in the 1909 to 1915 crash there was nine rhythms, and computers were not invented back then. Yet today, in 2013, when computers do a lot for us and soon we will be wearing them as glasses, the markets still have nine rhythms. There has been no change at all, other than just more volume making it safer for the small trader!

So much for algorithm trading changing the markets!

**Another proof that the Law of Vibration and Harmony is in control.**

In the fast pace and leveraged positions of the markets follow and use the Tri-Rhythms to protect (take profits) and project where the market is going in price to make money or wait for the target to happen then reverse the trade and make money in the opposite direction. Now let's join these rhythms together to see a more complete picture in illustration 3.5.

**Drawing 3.5UP Trend more complete**

# Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

## Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

On the uptrend illustration 3.5 drawing it is the same as the downtrend but the down trend TriRs are generally faster due to less time component than the 'CTM' up Tri-Rhythms to cover the same ground as it were.

Time is not consistent. It speeds up and slows down in the markets. This is due to cycles are constantly changing. If you wish to know more about this then may I suggest you read my book titled "09/24/2017" You can find it here <http://www.revampyourmind.com>

There are two very important points from the above Figure.

1. TriRs 'M' always have 5 visual TriRs in them.
2. The 'ct' and 'CT' rhythms join the primary and corrective rhythms together

Thirdly, very important and critical thing is discussed in Chapter four.

Point one above:

You see that the 9M (noted/caption) is always above and below the TriR 5m or 5M (5 TriRs + 2 Cornerstone & 2 Trajectories (total 9)). This is because it is actually how it works in every set of TriRs rhythm. **IT CANNOT WORK WITHOUT IT AND YOU CANNOT TARGET EARLY WITHOUT THEM!**

## Chapter Three: Triangular Rhythms - Tri-Rhythms - TriR

You cannot target the C without the 'c' and you cannot target the next magnitude TriRs with out the 'C'. You can sort off but you need the C to double-check your calculations and I will show you how in Chapter Three.

If all you're doing is counting the Rhythms (as in the wave theory) then you're counting after the event which is pretty useless, really. If there is no cross-referencing there is no ability to cross check where you are in the markets. You will be lost for most of the time. Calling for Bear or Bull markets and not having a clue where you are or your time frame. This equates to a massive potential to lose your money and, therefore, you and your family's lifestyle.

Can you imagine it, if during the Apollo missions the message was received, 'Hello Houston. We arrived at the moon, with no planning or targeting, we just counted the variations / rhythms in the flight path'. Can you imagine that? **Yet that is what we have been instructed and taught if you will to do within the markets.**

It must finish going somewhere before it is able to return. **Going is returning.** What was before shall be **again**, only the cycle is a little different.

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

Dexter Yeager one of the most successful Amway distributors says people are the same wherever you go, the excuses are always the same, and only the faces are different.

**It is the same with the markets. There is a beginning and an end to every set of Tri-Rhythms *only the price starting and ending points are different.*** No matter what you are trading including forex, bonds and so on only the prices and points are different.

All rhythms are able to be calculated. If some market guy says we have to wait and see where the market is going, or you lost money because the market did this or that, what they may be really telling you is – **THEY HAVE NO IDEA!** It is time to run from their office!

Returning starts at the beginning of the previous end. For example, 'c' or 'C' Tri-Rhythms start at the end of '5m' or 5M (9 TriRs including the cornerstones). You cannot start the next set of 'm or M Tri-Rhythms without the 'ct' or 'CT" before them and after the M's (5 + 4 cornerstone) Tri-Rhythms.

All rhythms have Trajectory patterns. **YOU CANNOT HAVE ONE WITHOUT THE OTHER, IT DOES NOT WORK.** You **MUST** have rhythms of movement in both directions up and down or sideways, whatever the trend of the market.

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

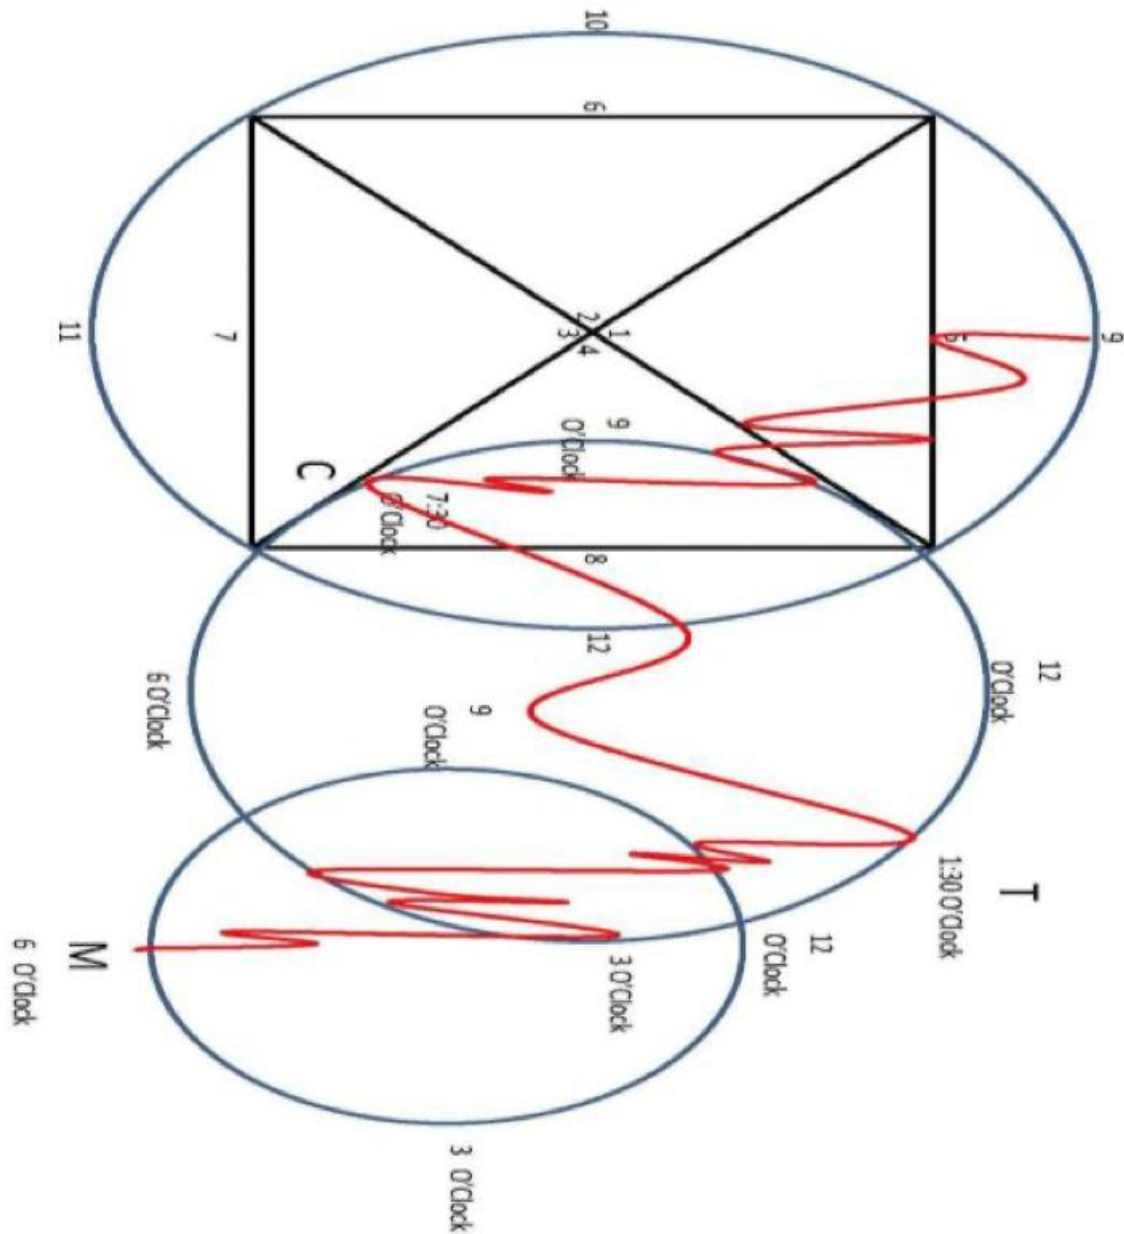

**I am simply stating the truth and that is the markets move in rhythms and 9 + 3 Trajectory Rhythms for each complete set of Triangular Rhythms - Tri-Rhythms and these triangles (cornerstones) give you the targets one needs to get the accuracy over 99%. I will expand on this in Chapter Four. Three Trajectory TriRs makes 12 to square the Circle, square the Square and square the Triangle out.**

It is the four Cornerstone TriRs that Square out the Triangles and the next four Magnitude TriRs to square out the Square and the last TriR number nine (up or down) to take you to the Circle.

The next three TriRs being the ctm of CTM's 10-12 Square out the Circle. Hence the down to 7:30pm motion up to 1:30pm motion and then down to 6pm motion. See drawing 3.5a below just to make it clear what is happening.

**Drawing 3.5a Market squaring the circle with a CTM trend**

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

In the Drawing above, it does not show all the labeling, as the need for brevity is great. However, it does now provide you with a visual of what the market is doing, according to the Law of Vibration and Harmony. The C

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

T M or the Rhythms 9-12 or with Wave Theory A B C is squaring the Circle. Notice the Circles are getting smaller, which allows or requires the market to have smaller adjustments the closer it gets to the end of the trend. Not always but quite often.

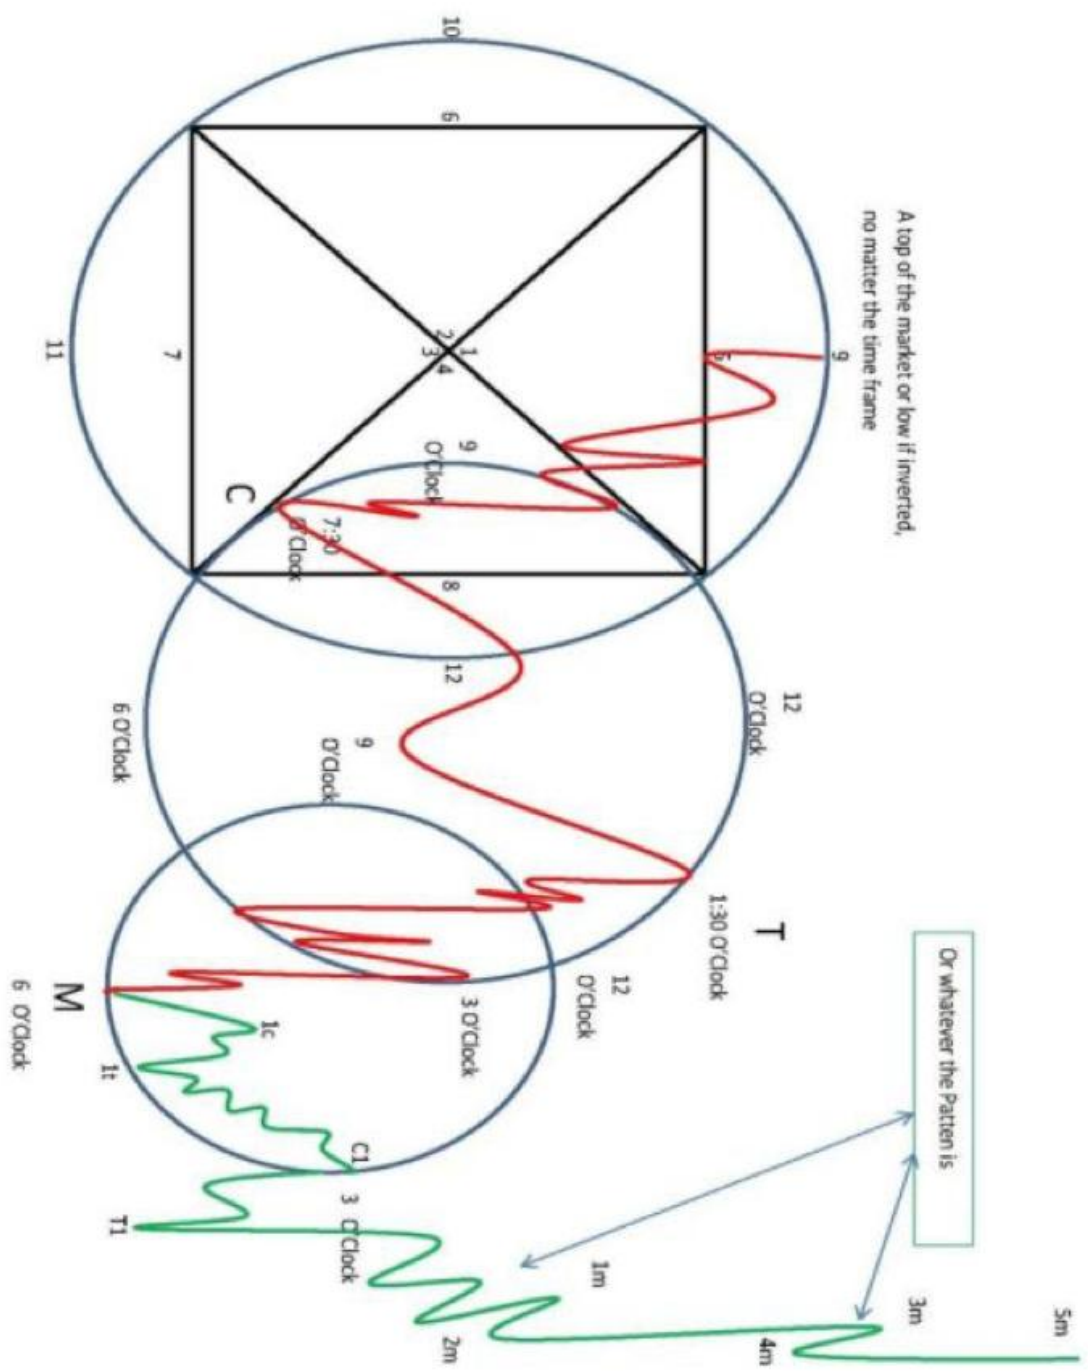

Yes you can change number 11 and twelve around so that number 12 is at the bottom of the circle and number 11 is at the 3 O'clock position.

### **Drawing 3.5b Market Squaring the Circle**

Market Squaring the Circle with a CTM trend and then the new trend up – NOTE on whatever time frame you are trading.

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

The C T M in the drawing above is the Rhythms 10,11 and 12 to square out the circle. Then the process starts again. It start again because it start new at number 13.

See Drawing 3.5c below of how the drawing in 3.5b would approximately look on a 2 dimensional chart and on the DJIA Cash Index Tick Chart from a high to a low. Obviously it's at your discretion as to how big you make the circles. This is because the circles are overlaid, overlaid and so on.

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

## Drawing 3.5c

Unfortunately the circles moved a bit during printing but you can get the idea of what is acutely going on in the four dimensions.

## Chart 3.5d DJIA 1909 Circles

I have used the 1909 DJI Chart When computers were not invented and therefore no algorithm trading and yet the same happens today!

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

W.D. Gann said one of his most important discoveries is that markets or numbers must square out.

## Table 3.0 below the Square of 12

For example. 12 times 12 is 144. So the square of 12 is 144, which looks like this. By Drawing a line at 45 degree angle you get to 144 from number 1. All in balance and all squared out.

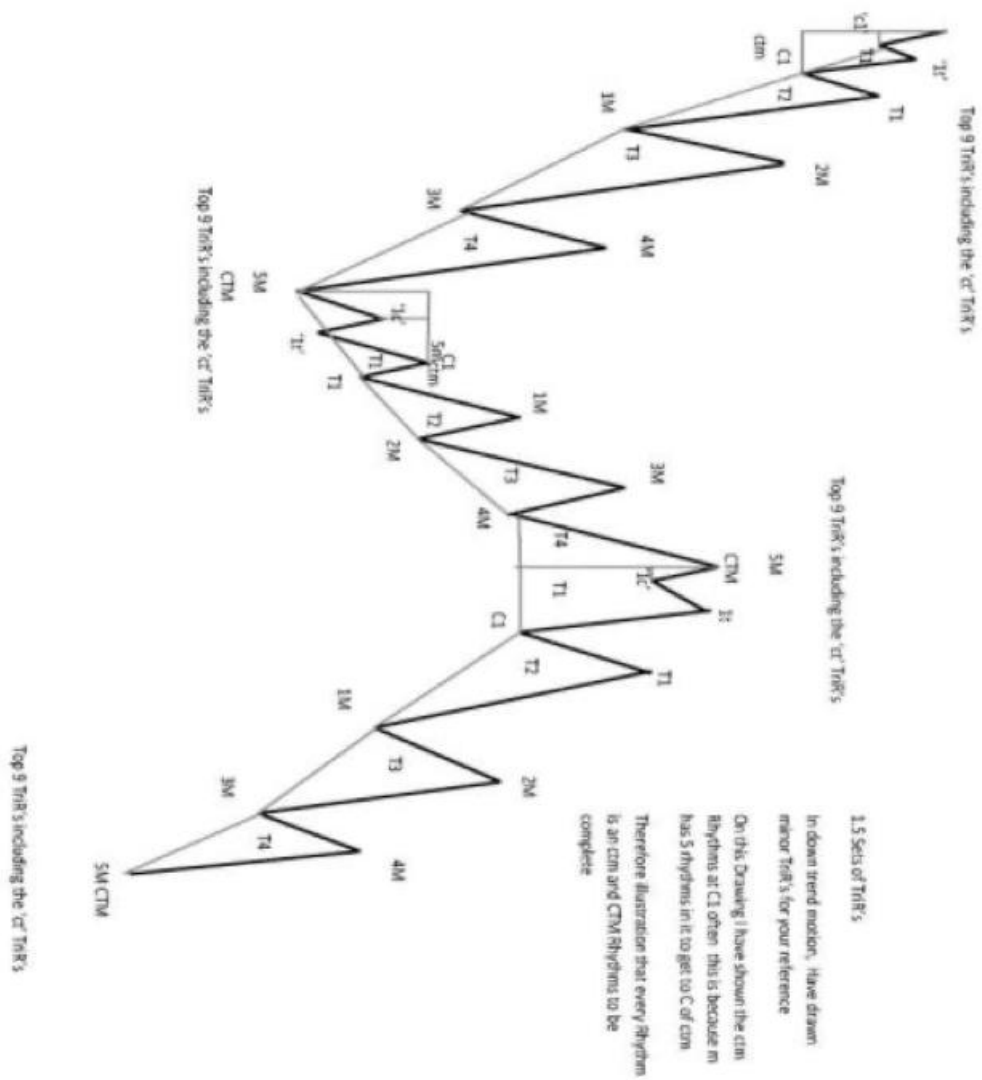

12	24	36	48	60	72	84	96	108	120	132	144
11	22	33	44	55	66	77	88	99	110	121	132
10	20	30	40	50	60	70	80	90	100	110	120
9	18	27	36	45	54	63	72	81	90	99	108
8	16	24	32	40	48	56	64	72	80	88	96
7	14	21	28	35	42	49	56	63	70	77	84
6	12	18	24	30	36	42	48	54	60	66	72
5	10	15	20	25	30	35	40	45	50	55	60
4	8	12	16	20	24	28	32	36	40	44	48
3	6	9	12	15	18	21	24	27	30	33	36
2	4	6	8	10	12	14	16	18	20	22	24
1	2	3	4	5	6	7	8	9	10	11	12

Above is the square of 12, 12 times 12 is 144.

Therefore Gann is saying that time and price must square out, which means they must balance. You can have the square of 76. For example 6 times 6 is 36 or the square of 52 is, 52 times 52 = 2,704.

Therefore at some point time must balance out points or price. If a market goes up really fast then expect a really long sideways motion to square or (balance out the time). A more complete Tri-Rhythms illustration below down trend in 3.6.

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

**Drawing 3.6 More complete Tri-Rhythm up down and up**

## Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

Sometimes I overlap the triangle rhythms Tri-Rhythms. I am counting so that I get four in up direction and four for the 'CTM' corrections Tri-Rhythms in total, really it is seven triangles, discounting the Minor TriR's Triangle for space on the chart.

You will notice that I have a grey line draw next to the 'ct's and 'CT's Tri-Rhythms. This is to show you it is a triangle and we are using the Hypotenuse for accuracy like you never seen it before.

If we want to invest, and the encouragement from the bible is to invest, (speaking here financially) God says he will teach us to profit.

Isaiah 48 v 17 Amp

***Thus says the Lord, your Redeemer, the Holy One of Israel: I am the Lord your God, who teaches you to profit, who leads you in the way that you should go.***

As God has said, he would teach us to profit and in this book we are talking financially. It is therefore logical that God has put the information where we can read it and see it. We can read it in his word and we can see it all around us and in the stars, on earth and in cycles. We just have to do the research after all.

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

*It is the Glory of God to conceal a matter and the Honour of Kings and Queen's, to search out a matter.*  
Proverbs 25 v 2 KJV 2000

I searched it out because I wanted to know the **Truth** and how to make money on the markets and have a accuracy over 95% was my target. Never did I dream of 99.++++% and greater. Gann had a Trading 91% verified record back in 1908, I wonder what his accuracy was in the 1940-50's close to 100% I would think.

The system you are being taught will get your accuracy over 95% and closer to 99.++++% after a little practice, and I do mean a little practice - not a lot!

If you want to trade or do anything and do it well then it is to your honour to seek it out and learn as much as you can on the matter you dedicate yourself too.

Let's now move on to the critical part in getting your accuracy up and that is in the next chapter when we focus on the 'c' and 'C' Tri-Rhythms we will show you at the nativity of the Tri-Rhythms the end is already known! Therefore it is the 'c' and 'C' that give you the targets for the end of the 9 Tri'R's and the 'c' Tri-R's that gives you the targets for the 'C' Tri-Rhythms!

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

Before we go to Chapter Four I have drawn in depth two sets (up and down trends) of Tri-Rhythms so you can get a full understanding of the make-up of what the markets do.

To do this, with all the labeling, I have had to split up the illustrations to fit in this book. First illustration below is of 'ctm' and 'CTM' UP The next chart after that is the 'M' Tri-Rhythms the markets make.

## Drawing 3.7 'ctm' and 'CTM' Tri-Rhythms up

This is just the connecting Tri-Rhythms to the next 5M Tri-Rhythms, without the minor and major 'c&t" and 'C&T"' Tri-Rhythms there can be no targeting and no 5M Tri-Rhythms! This is critically important.

If you just count 5 Tri-Rhythms then how do you know where you or the market is going? YOU DON'T! Yet by projecting the 'ctm' out you can know the end!

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

The illustration 3.8 connects to the next set of TriR's UP

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

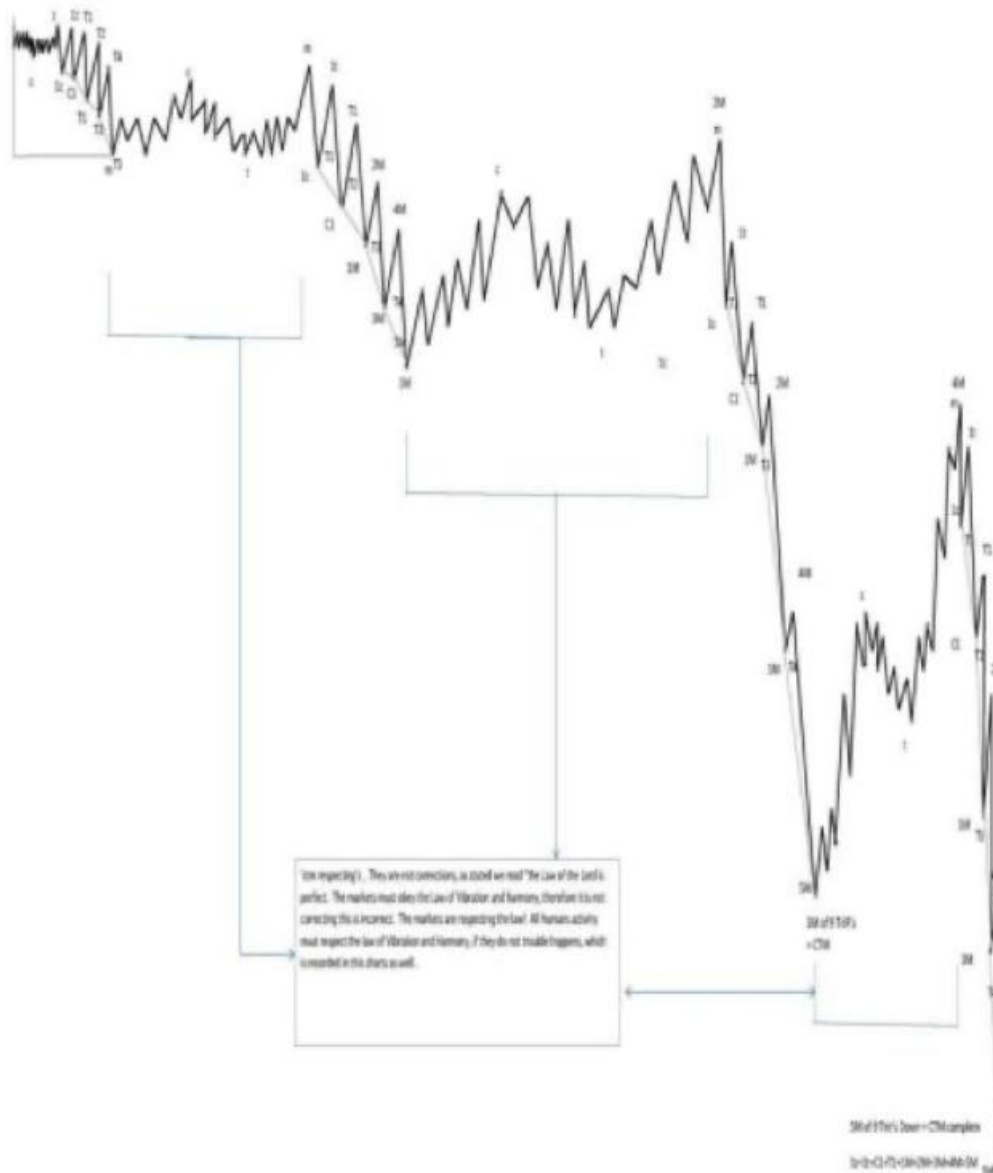

**Drawing 3.9 The last set of TriR's UP.**

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

Next are the Drawings and illustrations for the Down Trend Tri-Rhythms

## Drawing 3.10 DOWNTREND 'c' and 'C' TriR's

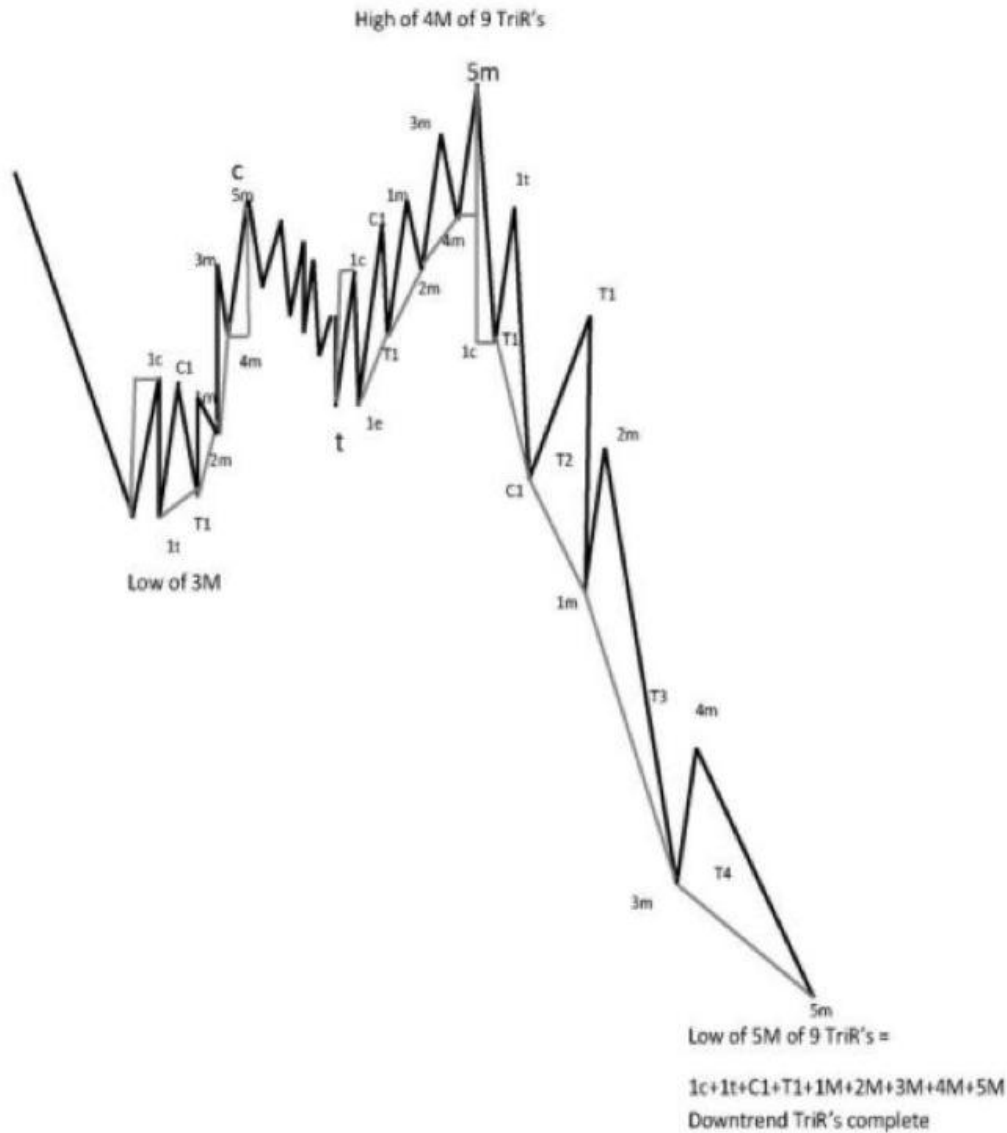

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

## Drawing 3.11 DOWN TREND TriR's T 1M, 2M, 3M of 9 TriR's Down

## Drawing 3.12 DOWN TREND TriR's 4M, 5M, of 9 TriR's Down Bear market complete.

# Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

4m and 5M Down of Bear market now complete total of  
( TriR's)  $(1c+1t+C1+T1+1M+2M+3M+4M+5M= 9$   
TriR's)

**All of which are needed for pinpoint precision and accuracy.**

## **Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR**

All the above drawings and illustrations are in general form only. There are quick 'ctm's and 'CTM' Tri-Rhythms and slow Tri-Rhythms. The quick TriR's are not so much time based where the slow ones are. In the illustrations and drawings above in this chapter I have shown both but mostly the slow TriRs.

The slow TriRs generally take place after and / or before a quick burst of energy if you will, where the price of the market you are trading moves very quickly.

Now you have learnt the hard part the rest is easy. It is the Cornerstone Tri-Rhythms from the end of Tri-Rhythm 5m (9 TriRs) (up or Down / 'LONG or SHORT') to the end of Tri-Rhythms 1c and C1 that gives you the targeting for the next 5 M Tri-Rhythms the Magnitude Tri-Rhythms (the M Tri-Rhythms) including the trajectory Tri-Rhythms being the next T Tri-Rhythms.

You draw the lines that the market has not drawn i.e. (my grey lines) on 1c and C1 to form the triangle and thereby showing you what the Hypotenuse is (distance from 5M to 1c or C1) which you times by a Square Root factor, which in turns provides you with the targets in advance.

## Chapter Three: Triangular Rhythms - Tri-Rhythms – TriR

You could join points '5' and 't' together and have the connecting triangle lines on top for the corrections but that only makes it confusing. So, I always keep the lines I draw at the bottom of the candlesticks that the markets are drawing (I use candlestick charting).

However, there are some important points to understand.

We begin with the basic diagram. Remember the StArgate 5M being the end of the 9 Tri-Rhythms (High or Low) becomes the point of Origin! **So to restate here you measure from 5M (9 TriRs) to 1c or C1.** Uptrend 'c' to 'C' Tri-Rhythms Drawing 4.0 on next page.

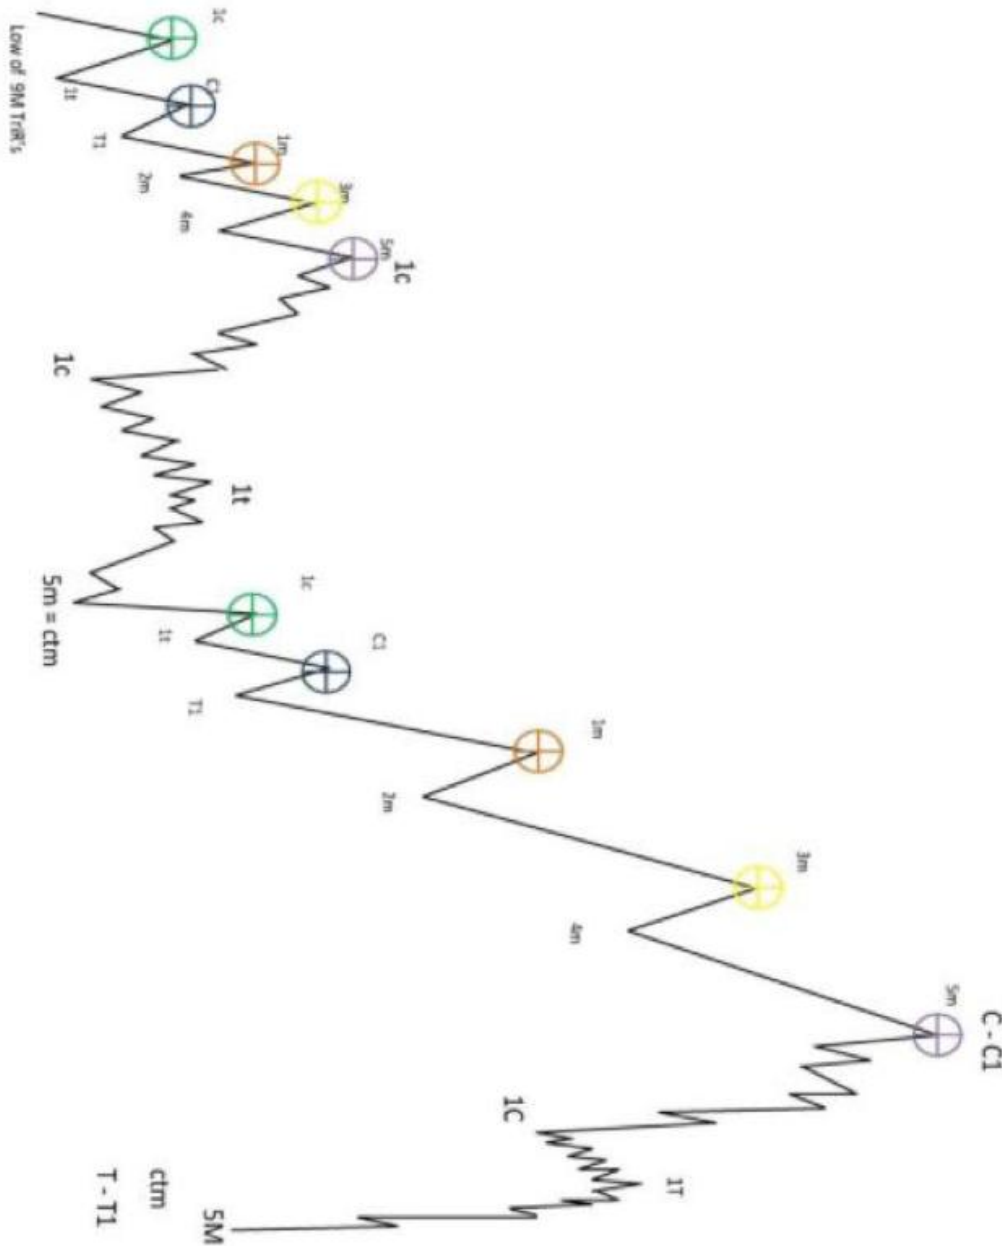

At times the 'c1' TriRs will provide you with the 'C' TriRs and then multiply the 'C' TriRs out to provide the 1,3,5 Magnitude TriR targets. This is not always the case or so I have found so far.

But when the markets do provide you with the 1,3,5M of the 9 (TriRs) from the 1,3,5m of C1 it does give you an incredible insight to where the market is going well in advance of anyone else knowing within days to a few weeks up to 5 years in advance!

Incredible really! In the – Training Mode chapter on the DOW JONES INDUSTRIAL Average I will prove to you that this can be the case.

# Chapter Four 'c' & 'C' Cornerstone - Tri-Rhythms

Drawing 4.0 1c to T1 Up

# Chapter Four `c' & `C'

## Cornerstone - Tri-Rhythms

### ***How to calculate – Reverse Engineering***

The corresponding Colours from 1c to C1 and so forth, for example, are or can be connected very closely to each other, usually by a square root number. This is not always the case but it is wise for one to check, on the market's you are trading. You check by doing reverse engineering.

### **Simple Method of Targeting**

1. Find the first four Tri-Rhythms forget the 1c TriR and take the C1 TriR High for up trends or LOW for down trends and:
2. Measure from the 5M to the C1 HIGH or LOW
3. Take that figure and times it by:

### **For UPTREND's**

Square Root of 2, 3 and 5

### **For DOWNTREND's**

Square Root 5, 7, 12

## Chapter Four `c' & `C'

### Cornerstone - Tri-Rhythms

4. Take the result and add it to the 5M low for Up trends and deduct from the 5M High for Downtrends

This will provide you with approximate targets for the 1M, 3M and 5M targets.

#### **That's It?**

**Yes that's it.** Yet the builders of the Wave Theory and Principle rejected the cornerstones, and so has every other Market Participant who has written books, encyclopedias, papers and all other type of correspondence.

**I Barry Gumm discovered it and I get 99.++++% to 100% accuracy with it!**

As Einstein said  $MC^2$  is easy but could you think of it?

As with this method, technology and process, easy yet it took a simple minded Barry Gumm to work it out!

**It can't be that easy.** Your right it takes work, but a lot less than any indicator, fundamental and any other process of market participation than I know.

# Chapter Four 'c' & 'C'

## Cornerstone - Tri-Rhythms

**Harder more time intensive but Greater insight method –**

1. For example 9m to green 1c might be say 50 points and the next green 1c might be 70 points. Once this is known deduct 50 (1c) from its counterpart 1c 70 points. Makes 20 ( $70 - 50$ ) = 20. Find out what square root number you have to use to get 70 points. In this case it is the In between Square root of zero and 1 being 0.39 Therefore  $(50 * 0.39) = 20$ .  $(50 + 20) = 70.7$
2. Next find the height of C1 from the low of 9 TriRs which might be say 65 points. Then find out the height of the corresponding from the TriRs low 1c which might say 91 points. In between Square root of zero and 1 being 0.39  $(65 * 0.39) = 26$   $(65 + 26) = 91$  points.
3. Next find the height of 1m from 9TriRs low on 1c TriRs and then find the height of 1m on C1. Let's say 1m of 1c is 100 points and 1m of C1 is 173 points. Then find the square root number in this case it is square root of 3 (1.73) therefore  $(100 * 1.73) = 173$  points.

Notice I did it a different way this time. Instead of finding the difference I just found the number I could have done it this way  $(100 * 0.73) = 73$  points +  $100 = 173$ . I prefer the latter and will try and use this method though out the rest of this book

4. Next find the height of 3m from 9TriRs on 1c TriRs and then find the height of 3m on C1. Let's say 3m of 1c is 228 points and 3m of C1 is 508 points. Then find the square root number in this case it is square root of 5 (2.23) therefore  $(228 * 2.23) = 508$  points.
5. Next find the height of 5m from 9TriRs on 1c TriRs and then find the height of 5m on C1. Let's say 5m of 1c is 450 points and 5m of C1 is 1188 points. Then find the square root number in this case it is square root of 7 (2.64) therefore  $(450 * 2.64) = 1188$  points

### ***Trajectory Tri-Rhythms***

6. 1c of ctm to 1C of 5M of CTM of T1
  - 1t of ctm to 1T of 5M of CTM of T1
  - M of ctm to 5m of 5M of CTM of T1To Drill down Further one would calculate
  - 1t of 1c to 1t of C1 using the same principles above

## Chapter Four `c' & `C'

### Cornerstone - Tri-Rhythms

- T1 of 1c to T1 of C1
- 2m of 1c to 2m of C1
- 4 m of 1c to 4m of C1

Notice it is 12 Tri-Rhythms, as previously pointed out . If one is computer trading then you can drill down further if you wish of all the sub Tri-Rhythms of the Trajectory Tri-Rhythms. For me I prefer time out and do other things thereby keeping the trade small enough to not need to worry or be watching it every minute of every day type of thing.

By Choosing what you want to trade and reverse engineering the chart you will find out the Square root numbers the market is using.

Be aware that it may and probably will not be exactly a Square Root number. Therefore it may be in the root of 3 but not exactly Square Root of 3. The market you are wanting to trade maybe using a Square Root factor of 1.801 for example whereas the Square Root of 3 Factor is 1.732.

The Square Root factor of four is 2.0 and therefore the root factor is in the root three but not 4, being less than root four but higher than root 3. Again being not "R3" which is 1.732, being 1.801 and not R4 which is 2.0.

# Chapter Four 'c' & 'C'

## Cornerstone - Tri-Rhythms

Therefore the Market is using a factor of 1.801 which is in the Root of 3.

### Drawing 4.1 1c to T1 Down

I see no reason to repeat here. Therefore just apply the process as previously shown to the Down Trend in the same manner. It takes a bit of getting use too.

# Chapter Four 'c' & 'C'

## Cornerstone - Tri-Rhythms

By Reverse Engineering or back testing, you will find out how the market has constructed itself over time.

Then when you are ready to trade and the market turns, all you need to do is find out the first 1c to 1t pattern and put the trade on. You will then also be able to project where the market is going well in advance of any other indicator out there.

What I have just shown you is incredibly important if you are going to trade profitably and simply from day one.

Now that the trend has grown and the actual C1 TriRs are known and you have compared them to the 1c TriRs and learnt from the process simply multiply out the C1 TriRs be they 1m, 3m and 5m (focusing in on the 1M, 3M and 5M) Magnitude Tri-Rhythms Targets) by either the square root factors the market gave you if the difference from 1c to c1 etc., are the same.

If they are not, then use the factors that the reverse engineering has given you, for the direction of the trend you are now trading. I.e if you have completed back testing of a BULL market and not a Bear and the market turns bearish, then go back and reverse engineer for a

# Chapter Four 'c' & 'C'

## Cornerstone - Tri-Rhythms

Bear market. Then use the factors that the bear market provides you. All of the above will provide you with the 1M, 3M and 5M of (9 TriRs) targets.

Then at the beginning of the 1M, 2M, 3M, 4M and 5M measure the 1c and C1's to provide confirmation for each of the Rhythms the market is trending in.

If you do not have these the factors that the market and back testing should have provided you and you are trading daily charts then use the square root factors of 2, 3, 5 to begin with and refine going forward.

Square Root of 2 = 1.414

Square Root of 3 = 1.732

Square Root of 5 = 2.236

AND refine from there. For Bear Markets use

Square Root of 5 = 2.236

Square Root of 7 = 2.645

Square Root of 11 = 3.366

Square Root of 12 = 3.464

Square Root of 13 = 3.605

Every Tri-Rhythm has the basic Tri-Rhythms in it right down to the tick and including the tick Tri-rhythms / charts. You cannot get away from them, They MUST be included!

## **Chapter Four `c' & `C'**

### **Cornerstone - Tri-Rhythms**

If you try you will fail as the 'CT' Tri-Rhythms join the M Tri-Rhythms together, you will be rejecting the cornerstones and the Trajectories!

If you do not count them you will fail and lose money. You will be expecting the market to turn down and it may then turn up and put you in a losing position (whiplash). The minor TriRs are the basis of the next 9 TriRs.

Remember 5M being the end of the 9 Tri-Rhythm becomes the point of Origin! To restate it here you measure from 5M to 1c and / or C1.

Tri-Rhythm 12 becomes the reentry point if you took profits at 1m, 3m, 5m, and 1M, 3M, 5M.

For example let say the market hits a low and you mark that as 9M, and you trade long (up). Also you maybe be a swing trader, then you take profits at 1m, 3m, 5m, and 1M, 3M, 5M and reverse the trade to take advantage of the ctm Tri-rhythms be that 2m 4m and 2M and 4M.

I cannot express it enough. The 'ct' & 'CT' Tri-Rhythms join the 'm' & 'M' Tri-Rhythms together.

Leave them out and targeting becomes a matter of guesswork, like trying to figure out volume like the

# Chapter Four `c' & `C'

## Cornerstone - Tri-Rhythms

Wave theory has too many other indicators. A marvelous discovery and it's sad that it was missed and rejected but 'ct & CT' Cornerstone Trajectory Tri-Rhythms are the greatest aspect of every market.

### THE MARKET TELLS YOU WHERE IT IS GOING IN ADVANCE

Drawings 4.2 and 4.3 The Magnitude TriRs I will use these charts to explain two points.

**Point 1.** The 1c to c1 to 5M (9TriRs) and all sub Tri-Rhythms can be at times (but not always) all projected from the same Square Root factor relative to each ones labeling as they unfold in time and space. However because the markets expand in odd integers this may not always be the case, so you cannot rely on it. Therefore using C1 to 5M as an example quite often you can measure from the low to the top of C1 times that number by square root of 5 being 2.236 and come very close to the answer.

**Point 2.** Assuming the 3.2 is the next set of TriRs up be they either 1M, 3M or 5M one just measures the same as explained be it 1c or C1 from the Low of T1, 2M or 4M and multiply out by the reverse engineering factors or by the simple Root 2, 3, 5 (uptrend) or more to give you the

# Chapter Four `c' & `C'

## Cornerstone - Tri-Rhythms

Magnitude TriRs and end of the trend. It should be noted that the closer to the Tri-Rhythms ending the more likely hood Fibonacci number will work.

### Drawing 4.2 Magnitude TriR's 1c, C1 and 1M, 3M and 5M

## **Chapter Four `c' & `C'**

### **Cornerstone - Tri-Rhythms**

This is because once the Tri-Rhythms expand out in the spiral fashion they will come up against a circle. As mathematically proven above, this happens around  $1/5^{\text{th}}$  of the time.

Remember it (the trend) started at the APEX of the Pyramid (up or down / LONG or SHORT) being the small cornerstone TriRs and expanded out eventually expanding out to hit its boundary line at first the square at Tri-Rhythm 7 & 8, then at 9 being the circle line and a strong point in time and space i.e. be it a number of 12, 153, or 144, 693 or whatever the number of division of a number it may be.

If one was to build the pyramid upside down you would see that an ever increasing amount of stone is needed, therefore the Triangle Rhythms are not continually hitting the boundary of the circle. However, towards the end of the sequence this is very likely and therefore one should include and be very aware of the Fibonacci expansion and retracement numbers. The market may ignore the Square root number and hit the Fibonacci one instead or both at the same time.

The Drawing 4.3 is just the opposite of 4.2. It is a downtrend instead of an uptrend.

## Chapter Four `c' & `C'

### Cornerstone - Tri-Rhythms

The method of calculations is the same. However there will probably be one big difference and that is the square root numbers the market you are trading uses.

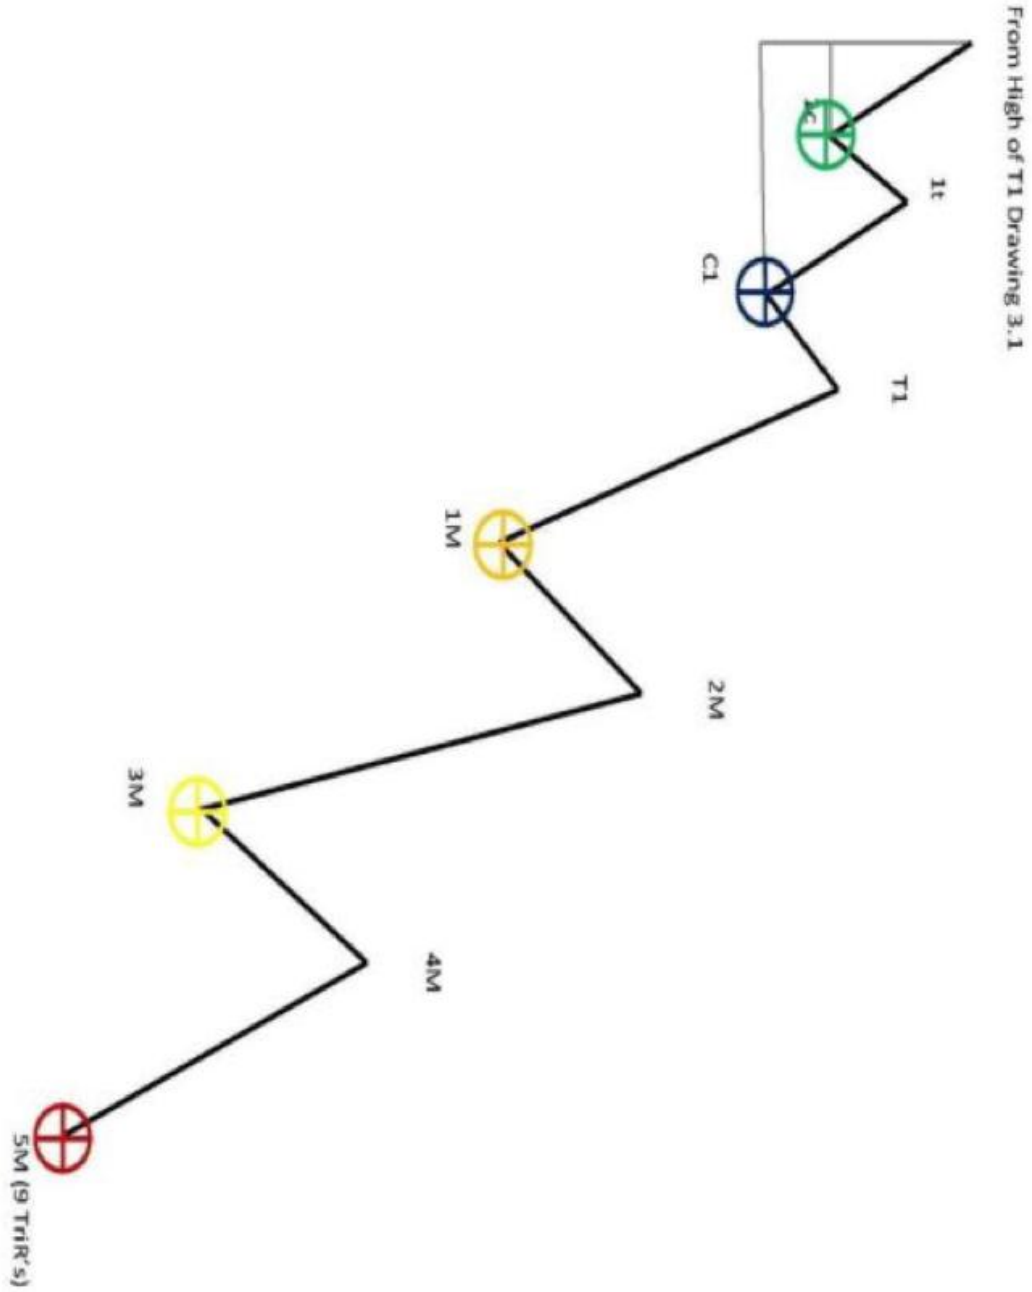

As I explained previously, the down trends use up less time. In the game Snakes and Ladders, going up the ladders takes time and going down the snakes can get you back to the start just when you thought you were going to win.

It is the same with the markets, due to the speed the down trend move they cover a lot of price or points in relatively short periods. This causes a higher square root number to be use most of the time.

If you have done your reverse engineering you will know the numbers. Just repeat the processes shown to the uptrend and to the down trend.

**Drawing 4.3 Magnitude Down TriR's 1c, C1, 1M, 3M and 5M**

# Chapter Four `c' & `C' Cornerstone - Tri-Rhythms

# Chapter Four 'c' & 'C'

## Cornerstone - Tri-Rhythms

Now you would have seen I have consistently put grey lines to make triangles for the 1c and C1 TriRs.

I do this on my charts quite often although now I know the process I quite often leave them out. There are there for a reason and that is to show the projection of the magnitude TriRs and the possible Trajectory see below in 4.4 which can be either a up or down trend.

### Drawing 4.4 Basic Timing and Trajectory.

Above in Drawing 4.4 you have a simple projection of TIME.

## **Chapter Four `c' & `C'**

### **Cornerstone - Tri-Rhythms**

For reference you can see how I did this on a live chart in Chart 6.0 SPI (Chart 6.0 of chapter 6) Down Trend.

You can also see how I did it in 6.3 and I had it right to the day on that chart as it turned out in the end which was the end of Magnitude Tri-Rhythms 3M (7 TriRs) or what Wave Theory names wave 3.

Back to trajectory line - I was still developing this technique then and as you can see in chart 6.5 I had moved the line. The above can be very valuable indeed, takes a minute to learn without having to learn how the solar system or the Universe (law of Vibration and Harmony) works to do it!

## Chapter Five: Displacement Factor

The points (corners) of the Great Pyramid do not square up with true north and south of the compass. One would expect them to do so seeing the whole structure is so accurate on all of its other measurements.

In fact, the Great Pyramid is off its true alignments of the North, South, East and West points of the compass by  $2^{\circ}$  and 28 minutes (two degrees and 28 Minutes). This is a very important point. We also know that the earth over time has tilted at 22.8 degrees. Actually, the tilt moves from 22 to 25 degrees over time.

What is so often the case is that you just need to delete the decimal place out of the figure to see the similarities in the numbers one is looking for or double or half the number.

In this example, the pyramid is out of square with the compass points of north east south and west by 2 degrees and 28 minutes.

By moving the decimal point one space to the right, you have 22.8 degrees which within the range of the tilt on the Earth axis. By removing the decimal point completely it becomes 228. Which is a number that I come up with trading the Sydney Futures Market (SPI and XJO) a lot, among other numbers. I am not the only one who has seen this as Alan Oliver mentions it in his book *Trading with the Gods*.

# Chapter Five: Displacement Factor

Also 2.29 is the Height of the ascending passage. Another confirmation that 2.28 - 2.29 is a measurement of significance.

The term for Axis tilt to Astronomers is 'obliquity', which, according to the Collins dictionary, is in the terms of planetary science a deviation from the perpendicular or horizontal. For example Earth's current tilt or obliquity is approximately 23.45 degrees.

## Chart 5.0 Ellipse

The eleventh Moon of Neptune, by the name of Sao, has an interesting fact and that is that its semi-major Axis is 22,228,000 Kilometres. The discoverers of this were M. Holman, J. Kavelaars, T. Grav, W. Fraser, and D. Milisavljevic.

The Semi-Major or Minor Axis is the longest in diameter. A line (line segment) that runs through the center and both foci, of an ellipse with the ends at the widest points of the shape.

## Chapter Five: Displacement Factor

The ellipse can be useful in the financial markets in Technical Analysis. I will not go into it here but a simple but effective website for reference and working model for you to play or use is

<http://www.mathsisfun.com/geometry/ellipse.html>.

The perimeter ellipse is not that easy to work out and neither is the incline. I used to wait until the Ellipse was drawn by the markets to provide me the approximate finish date and perimeter. You do not need to do that now. One can calculate it much earlier if they wish. Although I do not bother due to finding easier ways to measure targets on financial markets.

You can try the perimeter Calculations here if you wish  
<http://www.mathsisfun.com/geometry/ellipse-perimeter.html>

As just shown there is another example of the number 228 magnified this time by the three zeros. Number 228 is a composite number. Factors of 228 are  $2 * 2 * 3 * 19$ . Number 228 has 12 divisors: 1, 2, 3, 4, 6, 12, 19, 38, 57, 76, 114, 228. Sum of the divisors is 560.

Number 228 is not a Fibonacci number.

# Chapter Five: Displacement Factor

## ***Earth & the number 228***

Let's have a look closer to home if we divide 228 by 2  
( $228/2 = 114$ ). Is 114 special in relation to Earth?

In the argument of perihelion we see the number:  
114.20783°

Reference: <http://www.eightplanetsfacts.com/earth.php>  
under orbital characteristics.

The argument of Perihelion is the orientation of an elliptical orbit can be specified by three orbital elements: the inclination, the ascending node and the argument of perihelion and is best referenced here  
<http://astronomy.swin.edu.au/cosmos/A/Argument+Of+Perihelion>

The Pyramid has so many qualities that are very relative to earth that one wonders if they have all been found as yet.

## ***Saturn & 114***

Longitude of ascending node: 113.642811°

Argument of perihelion: 336.013862°

It should be noted also that the number 228 is in the second square of 12. 12 times 12 is 144

# Chapter Five: Displacement Factor

2nd square of 12 is 288 in which 228 resides.

As you can see now the Lord or some call nature uses the same numbers or multiplication or division of the number that is in focus. **The above numbers may be relevant in a market you trade.**

Back to the Pyramid and the fact that the Displacement Factor is 2.28 degrees out means visually it works like the drawing below in 5.1.

The movement of the rotation means when you go round the Circle and back to the original starting point the point has moved 2.28 degrees and therefore is moving in a Spiral form hence the Fibonacci Cycle as I see it in my mind anyway..

## Chapter Six: Tri-Rhythms within Tri-Rhythms

*The appearance of the wheels and their work was like unto the colour of a beryl: and they four had one likeness: and their appearance and their work was as it were a wheel in the middle of a wheel. Ezekiel 1 v 16 KJV.*

Here is Ezekiel describing something in the words he could not describe, for example 'like unto the colour of beryl'. I believe that he saw colours that are not on earth, therefore he used the words 'like unto'.

Just as we know, there are cycles, or better termed and more accurately termed as rhythms, that we cannot see. Others we know only too well, like the rhythms of 24 hours in a day, 360 degrees or the one year rhythm or seven days a week rhythm.

There are seasonal rhythms, long-term rhythms. For example, the week beginning the 29th April 2013 was a 666 rhythm. It was 666 weeks from the 2000 high on the DJIA Dow Jones industrial average, New York exchange. We know that 666 weeks is 10 weeks short of 13 years. 13 years is a rhythm. *'Twelve years they served Chedorlaomer, and in the thirteenth year they rebelled.'* Genesis 14 v 4.

Let's look for some more so that you gain a deeper understanding of the rhythms God has spoken into our

# Chapter Six: Tri-Rhythms within Tri-Rhythms

universe and therefore into everything that is mathematical or leaves a mathematical trail, like the stock market.

## ***13 Tri-Rhythms***

As stated 13 is a rhythm, but not only 13 years. Let's take a look at our closest neighbor, the moon. The number 13 is associated with the Moon as it travels an average of 13 degrees a day and orbits the Earth 13 times in one year. The radius of the Moon is 1,080 miles, compared to the Earth at 3,960 miles, a ratio of 3:11.

When you divide 3 into 11 the result is 0.27272727. The Moon's sidereal cycle, that is once it returns to a fixed point or star (sidi) is 27.3 days. If you add the sum of 1+2+3+4+5+6+7+8+9+10+11+12+13 you'll get 91, the number of days in a season and 13 times 4 equals 52, the number of weeks in a year. The Square Root of 12 -13 or the factor 2.605 seems to be a number the Sydney Price Index uses often on Down Trends.

## ***144 Tri-Rhythms***

Revelation 7 v 4

***And I heard the number of them which were sealed:  
and there were sealed an hundred and forty and four***

## **Chapter Six: Tri-Rhythms within Tri-Rhythms**

*thousand of all the Tribes of the children of Israel.*

Above we see that God likes 144,000 when we times 12 by 12 we get the square of 144 or 12,000 by 12,000 we get the square of 144,000. The rhythm or Tri-Rhythms of 144 is very important in the markets.

144 as you have been shown is a complete Rhythm of the markets and is the favourable point of reentry for the next stage of the trend

### ***153 Tri-Rhythms***

John 21 v 11

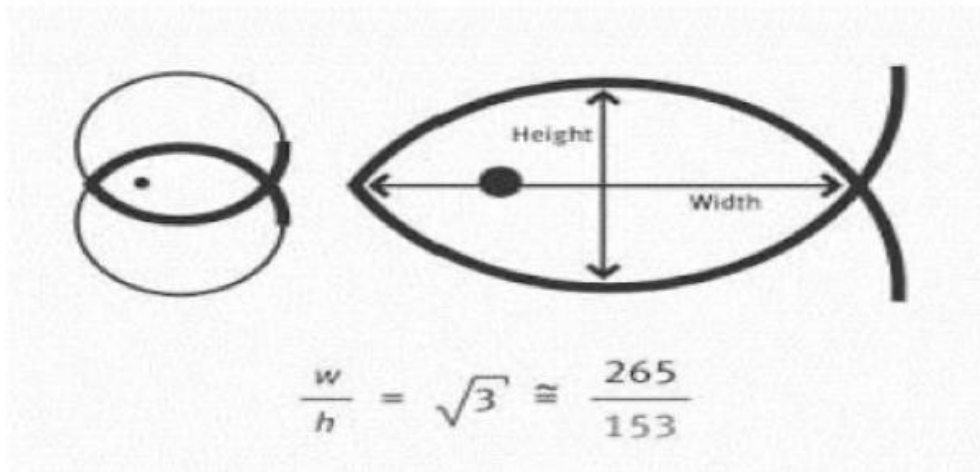

***Simon Peter went up, and drew the net to land full of great fishes, an hundred and fifty and three: and for all there were so many, yet was not the net broken.***

\*153 is a number that is closely associated with Pythagoras. Among his other achievements in mathematics, he is credited with discovering that 153 is the denominator in the closest fraction known, at the time, to the true value of the square root of 3, (a very important number that is used in the calculation of Tri-Rhythms) the fraction in the question being 265/153.

# Chapter Six: Tri-Rhythms within Tri-Rhythms

The ratio of 153/265 was consequently known throughout the Hellenistic world as the measure of the fish.

## Illustration 6.1 The Fish

153 is a perfect 5 month Rhythm.

\* Figure & statement from website

<http://richardstheoryofeverything.blogspot.com.au/2009/05/153-fishes.html>

\*Year 153 (CLIII) was a common year starting on Sunday of the Julian Calendar At the time, it was known as the Year of the Consulship of Rusticus and Rufinus (or, less frequently, year 906 Ab urbe condita. The denomination 153 for this year has been used since the early medieval period, when the Anno Domini Calendar

# Chapter Six: Tri-Rhythms within Tri-Rhythms

era became the prevalent method in Europe for naming years.

This is the calendar for any common year starting on Sunday, January 1 (dominical letter A) or for any year in which “Doomsday” is Tuesday.

Examples: Gregorian years 1989, 1995, 2006 and 2017 or Julian year 1917.

A common year is a year with 365 days, in other words, not a leap year 1917 certainly was a doomsday year for the Turkish when they walked out of Jerusalem without one shot being fired!

Finding Julian date given Julian day number and time of day. For the full Julian Date (divisions are real numbers):

$$JD = JDN + \frac{\text{hour}-12}{24} + \frac{\text{minute}}{1440} + \frac{\text{second}}{86400}$$

Notice the number 1440 that is the square of 144\* 10.

Time is Squared out by the 144 number!

## Chapter Six: Tri-Rhythms within Tri-Rhythms

You can now see that 13, 144, & 153 are In Astronomy, and time, therefore Rhythms & are part of the vibrations that God spoke into being.

Notice that one of the Gregorian years is 2017, an end of a Tri-Rhythms year or the beginning of a new Tri-Rhythms. Maybe this is why a Sign is going to appear in the Night Sky on the weekend of 23-24 of September 2017, see my book 09/24/2017.

This is important as at the start of the next crash is starting soon or will have by the time this book is published, the next growth rhythm will start just before or during 2017, or maybe some other process will start.

Ref:

<http://en.wikipedia.org/wiki/153>

[http://en.wikipedia.org/wiki/Common\\_year\\_starting\\_on\\_Sunday](http://en.wikipedia.org/wiki/Common_year_starting_on_Sunday)

Mathematical properties as a triangular number. 153 is the sum of the first 17 integers, and is also the sum of the first five positive factorials:  $1!+2!+3!+4!+5!$  The number 153 is also a hexagonal number and a truncated triangle number, meaning that 1, 15, and 153 are all triangle numbers.

# Chapter Six: Tri-Rhythms within Tri-Rhythms

## 153 Triangle illustration 6.2

### Mathematical properties

As a triangular number. 153 is the sum of the first 17 integers, and is also the sum of the first five positive factorials:  $1!+2!+3!+4!+5!$  The number 153 is also a hexagonal number and a truncated triangle number, meaning that 1, 15, and 153 are all triangle numbers.

It does not take long to figure that if you put a few of these Triangles together you get Tri-Rhythms. These

# Chapter Six: Tri-Rhythms within Tri-Rhythms

Tri-Rhythms are repeatable because they are mathematically proven. 153 as used in Market Analyst on SPY (SP 500) Chart 6.0a

As you can see when the SP 500 got to 153 days on the last rise in 2012 the Tri-Rhythms changed to down, the market fell, at other times it was support. This tool is available on Market Analyst and is the named number searcher.

The date of 24th of September 2017 is particularly interesting, you have the free copy to my book 09/24/2017 [www.revampyourmind.com/](http://www.revampyourmind.com/) in relation to Revelations chapter 12. If you brought this book in the pre-release phase

[http://en.wikipedia.org/wiki/153\\_\(number\)](http://en.wikipedia.org/wiki/153_(number))

**Chart 6.0a SP 500 & 153 is on the next page**

# Chapter Six: Tri-Rhythms within Tri-Rhythms

## 666 Tri-Rhythms

The number 666 is a wonderful warning number. God did not tell us about this number to be scared. He told us about this number so we could be fully informed. So we could be aware of danger and so we can profit or protect ourselves from its influences. The 666 cycle can be found in astronomy.

*Here is wisdom. Let him that hath understanding count the number of the beast: for it is the number of a man; and his number is six hundred threescore and six.* Revelations 13 v 18 KJV.

# **Chapter Six: Tri-Rhythms within Tri-Rhythms**

The week beginning 29th April 2013 was the 666<sup>th</sup> week from the high in the SP 500 and DJIA in 2000. It was warning that time is coming to a close on this cycle / Tri-Rhythms and a new one would begin.

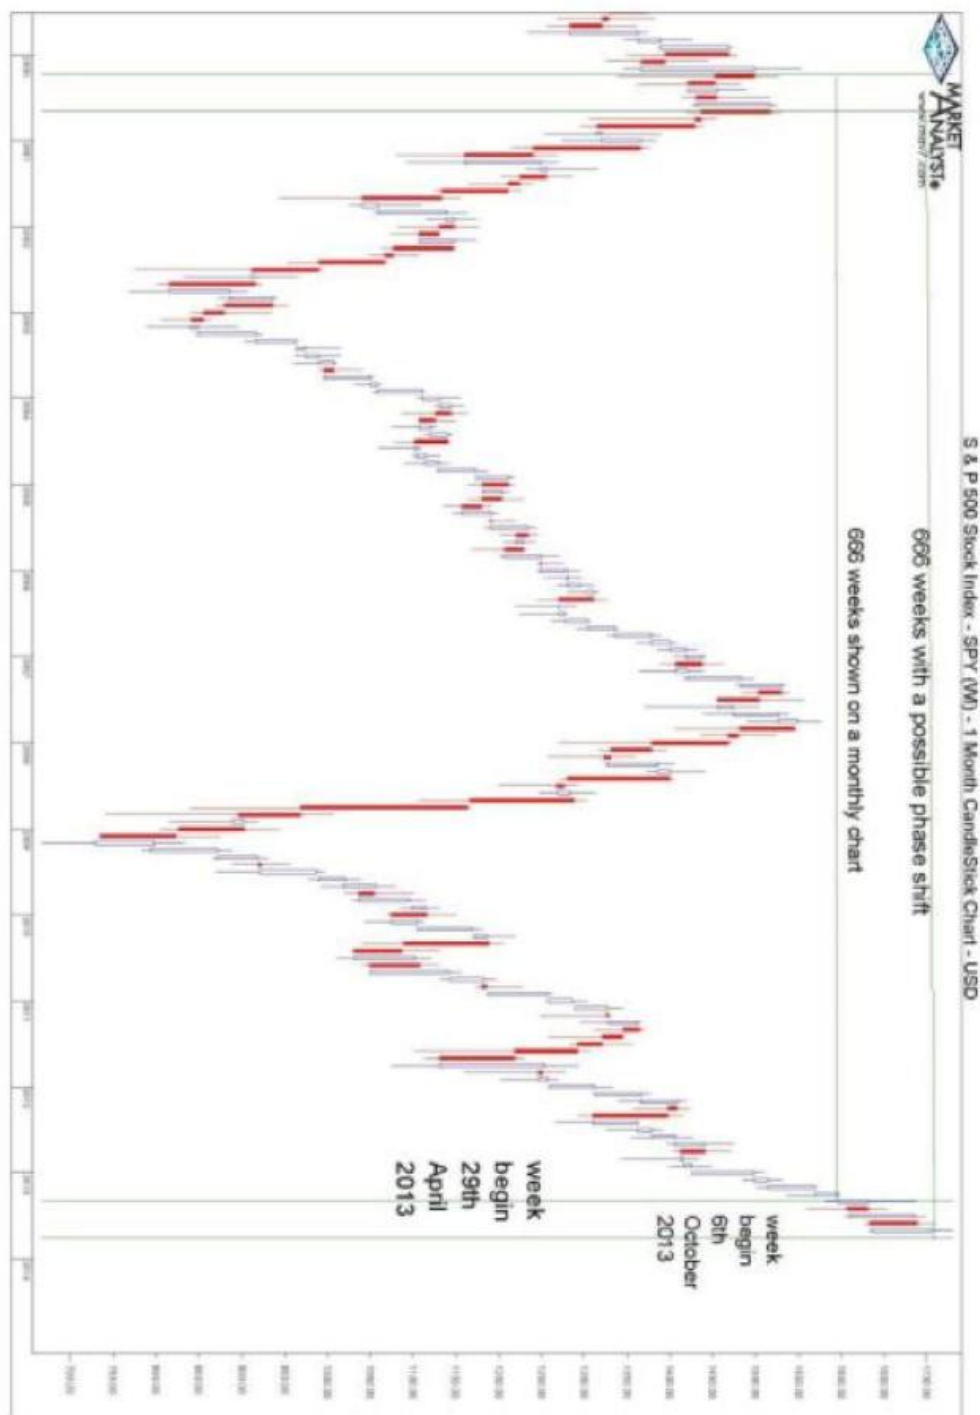

The Major Markets did not drop this time on this cycle but in 1987 they dropped 50% in just over a week. Gold and AUD broke though supports in this week and the USD rose!

Further on is Chart 6.2 of the DOW JONES 666 weeks number searcher chart from Market Analyst.

## **Chart 6.1 SP 500 666 Weeks**

# Chapter Six: Tri-Rhythms within Tri-Rhythms

## Chapter Six: Tri-Rhythms within Tri-Rhythms

Let have a look at the displacement factor in relation to the SP 500 Index Chart 6.1 on the previous page.

666 Warning due week beginning 19<sup>th</sup> April 2013 and a phase shift being the 6<sup>th</sup> October 2013.

The planet Jupiter travels 390 degrees around the sun, taking 666 weeks to do so (to travel the 390 degrees). That is 12 Constellation signs plus one making 13. (Fibonacci change number)

If you would like to understand how and why Cycles change please refer to my book 09/24/2017 available from here.

<http://revampyourmind.com/index.php/published-books/>

666 weeks times by 7 days equals  $(666*7) = 4662$  days

Take the displacement factor in chapter four and divide by 390 degrees.

$$2.28/390 = 0.0058$$

Take the 0.0058 and times by the 4662 days

$$4462 \text{ days} * 0.0058 = 27 \text{ days}$$

Add the 27 days to 4,462 days

$$4462 + 27 \text{ days} = 4489 \text{ days}$$

## Chapter Six: Tri-Rhythms within Tri-Rhythms

Now add the 27 days to the 6<sup>th</sup> October 2013 and it provides you with the week beginning the 02<sup>nd</sup> – 3<sup>rd</sup> of November 2013.

Therefore assuming the Crash starts soon it may be going to be after the **week of 3<sup>rd</sup> November 2013 when taking into account the displacement factor.**

In truth I could have used the moon for this calculation as the moon as shown thus far is a Fibonacci change number of 13.

The next chart 6.2 on the next page, illustrates the use of the Number searcher on Market Analyst Software.

I set it with a 0.50% tolerance and it showed me, when I was using it at the time, as you can see it was a couple of years ago, and warning me of the Days as in Calendar days, Bars as in Trading days and points movement of the 666 number. At the time I showed this to an engineer who was impressed with only 0.50% tolerance (he thought you would need more in the markets).

However as I have shown that is a huge amount if you take into account that accuracy should be measured up to the fourth decimal point! If I showed him the accuracy of the Law of Vibration and Harmony now,

# **Chapter Six: Tri-Rhythms within Tri-Rhythms**

with a 4<sup>th</sup> decimal point measurements, I think he would be greatly impressed. I certainly am how accurate one can be on the targeting within the Financial Markets.

In my book 09/24/2017 I demonstrate that the market made a turn with a fourth decimal point measurement in May 2013 using the planet Uranus.

Imagine that!

Uranus takes 84.3 years to orbit the Sun and it provides the timing on the Stock Market to 99.999+ accuracy!

That is better than any man made indicator , I have seen and it is FREE! In fact, it was only five days out! All you have to do is look up as it were. A little more on this a little later in this chapter.

**Chart 6.2 of DOW JONES Industrial Average & the  
Number 666**

# Chapter Six: Tri-Rhythms within Tri-Rhythms

## **Chapter Six: Tri-Rhythms within Tri-Rhythms**

The Triangles are just three dimensional. There is another element that makes a big difference and that is the fourth dimension, which we have already and will briefly touch on hereafter.

When I was an Insurance Agent and Financial Planner we were trained, advised & taught, that while selling Managed Funds, Bonds, Savings Plans and Superannuation (401k's for USA) that it is 'time' in the Markets that makes money in the end for the clients.

This is sounded reasonable at the time. If someone takes a better view for example, the chart below for the 1929-1932 crash 85% loss, if there were managed funds back then, and one invested just before the crash in 1929 it would have taken 26 years to get your money back!

**Chart 6.3 DOW JONES 1929 to 1954 to break Even**

# Chapter Six: Tri-Rhythms within Tri-Rhythms

## **Chapter Six: Tri-Rhythms within Tri-Rhythms**

Imagine that, you are retiring at age 60 but then see your money evaporate before your eyes and have to live on very little income while you wait for 'time in the markets' to recover your portfolio and asset value of your initial investment, and if you are lucky you will recover before you're 86.

That is assuming that you didn't use any of the money while re-growing it and there were no managed funds fees or adviser fees! It would seem to me a feat near impossible. Many retirees are encountering this situation in many western countries of the world right now, due to the crash of 2007-08 and the one that in reality has continued.

You see them working at the supermarkets and at the petrol stations and it is very sad indeed. Yet why, when all they had to do was a little bit of study and take on a little bit of risk themselves instead of assuming the Financial Adviser and broker knew what they were doing.

Unfortunately even the Christians had lots of prayer meetings in 2008, 2009, 2010 because their financial adviser lost them their money in the markets. If you wish to read a blog about this go here:  
<http://revampyourmind.com/financial-planning-advice/> .

# Chapter Six: Tri-Rhythms within Tri-Rhythms

All we had to do was lift up heads and see!

Let's look at another time period a bit closer to our modern day living 1987.

**Chart 6.4 DOW JONES 1987 to 1991**

## Chapter Six: Tri-Rhythms within Tri-Rhythms

Not so bad, only four years and again assuming no fees, However that was because the markets were in the middle of a 17.4 year growth cycle, where as the 1930s were not.

You see, Financial Advisers & Planners, Accountants, Lawyers, and Finance Brokers do not have the time and are not trained to know the basic market information **that you expect them to know.**

Financial Advisers are told (and forcibly at times) by their Dealer & Licensee Groups (the ones that hold the Financial Services Licenses (at least in Australia)) that **they are not to talk about their market expectations.** Therefore they do not have to study how the markets actually work either! No wonder you lose money listening and acting on that advice.

If they do talk about the market expectations **they are disciplined.** For the self-employed advisers that means that their authority gets **put on hold** and they are not allowed to provide personal advice until the Licensee Compliance Manager sees fit!.

In other words, their processes of new business generation of income is suspended and they cannot make next week's or month's income for them or their staff. Little wonder that they comply at the cost of their

# **Chapter Six: Tri-Rhythms within Tri-Rhythms**

knowledge on how markets work and the very reason you go to see them.

I remember being a fresh face in the early 1990's to 1997, or thereabouts, seeing people's managed funds that were invested just prior to 1987 crash and they still had not broken even. It's to do with something about the markets have to go way higher than the previous high for one to break even, and then more when advisor fees are involved and we have not begun to take in to account inflation etc.

Check out the chart on the next page.

If you invested in the FTSE in 1999 see below for monthly chart

## **FTSE MONTHLY CHART 6.5**

# Chapter Six: Tri-Rhythms within Tri-Rhythms

Over 13 years have gone by and you still have not got money back, assuming your managed fund or share company is still in business. And another crash is about to start.

## Chapter Six: Tri-Rhythms within Tri-Rhythms

It has, as of 3<sup>rd</sup> October 2013, and being only about 160 points short of the Square Root of 4++ target on the DOW Jones DJIA index which is the factor it used on the 2002 to 2007 bull market.

Fibonacci Target being 1.618 of Elliot's wave one is 16,330 points on the DOW It is very close to its high very close indeed.

So it will be even longer before you have your money back, if at all unless one is wise. Therefore it is not so much 'time in the markets' IT IS, *Timing the markets* and managing your entry and exit points.

Managing your entry and exit points is what this book is about.

Tri-Rhythms of targeting price is not about timing the markets; it's about an easy calculation to work out exactly or very close to it where a market is going to on the time frame you are working by measuring from the last set of 9 TriRs to the beginning to the end of the 'C' Tri-Rhythms. Simple and it can be done simply and quickly in minutes.

## Chapter Six: Tri-Rhythms within Tri-Rhythms

To time the markets, is using a whole lot of Tri-Rhythms, Cycle Analysis, and Bradley Cowan's "PTV" "Price Time Vector" if one wants to and so on and so on the study is immense. Time is covered in Scripture.

Ephesians 3 v 18 *'May be able to comprehend with all saints what is the breadth, and length, and depth, and height'*.

If we, and planets of our solar system for example, are three-dimensional then breadth is the fourth dimension – time. It takes time to get from one place to another and so it is with the planets of the solar system. It takes 84.3 years for Uranus to travel once around the sun.

On the 17<sup>th</sup> of May 2013, Uranus has traveled once around the sun since the 3rd September 1929 high in the DJIA. Five days later the DJIA started to fall when the moon was in 180 degrees opposition to the March 2009 low. The big time cycle told you approximately when the lower time cycle. The moon in this case told you the day. How good is that? God is good. If you wish you can time it down to a 4-minute window.

Five days out of 84.3 years is not bad accuracy 84.3 years = 30781 days Not counting leap years = 99.9998% accuracy now add in the leap years 1 day for every 4 years in 84 years = 21 days less the 5 that were not exact

## **Chapter Six: Tri-Rhythms within Tri-Rhythms**

= 16. 16 days out, out of 30802 (30781+21) = 16/30802  
= 99.9994% .

**I would say the Law of Vibration and Harmony  
Cycle analysis is fairly accurate!**

If you are a trader using Indicators, Moving averages, or Multiple moving averages, or your using pattern recognitions or 4 dimensional analysis's or whatever else you may be using is your accuracy 99% plus, if not they you may need to visit this information, however if you follow Chapter Four and Seven, then your point accuracy will go to over 99% accuracy alone.

Let's look deeper with examples in chapter 7 with actual intraday trading.

# Chapter Seven: Cornerstone TriR's In action

In this chapter, we are going to see some of examples of Tri-Rhythms in action and the accuracy I achieved in using this technology. As stated before while I was learning and developing the techniques and technologies before you now. I was using the markings that the software providers provide. My apologies if the markings are a little different and seem a little confusing from what I have shown you in this book.

I did not know I was going to be writing a book about it at the time and even when I did I changed what I labeled the Rhythms actually do to discovering more about the subject.

The Index below is the SPI – Sydney Price Index (Futures) Futures charts move for 22.5 hours a day.

This target was made on the 01 Jun 2012 Tri-Rhythms. Target was 3990 it got to 3998. Just eight points out, which was over 99% correct.

Also as you can see I was using Wave Theory or Principle markings, this was before as I was discovering (discovered), analyzed and invented a better way, an accurate way and a predictive way. However I was using them the **incorrect** way according to the Wave principle. **Yet I was getting concrete results.**

# Chapter Seven: Cornerstone TriR's In Action

Remember in the chart below, Wave Principle would not have counted the (what I have marked as) "A & B" Tri-Rhythms! And therefore NO Way to Target Early and little chance of Targeting accurately unless you then add in channels and volume indicators and such like. All of which I do not use and have no use for but my targeting accuracy is over 99% now!

## Chart 7.0 SPI

Over time it the Australian SPI (Sydney Price Index) has revealed that the square root of two is a common factor it uses for corrections when the overall trend is up.

Therefore find the C1 times by the square root of two and within a few points you will have your target. Find the 1c and do the reverse engineering to find out the usual square root number it gives you to find out C1 well in advance of other traders and thereby knowing the final target just a few hours or minutes into the Trajectory Rhythm.

# Chapter Seven: Cornerstone TriR's In Action

From the chart you can see the Market then reversed and started up higher. I had calculated lower targets as you can see but I knew in advance that the index was turning.

Why? How did I know that? **Easy! It was forming Triangles / Tri-Rhythms!**

# Chapter Seven: Cornerstone TriR's In Action

The Tri-Rhythms were warning me it was not going lower, but rather turning up. The **Markets Always form Triangles when Turning!**

If you don't see them, it is possibly because you need to go to a lower timeframe. Why triangles? Personally, I believe the markets are changing cycles mini and major.

I also believe it is because they are going around another face of a shape. They could be or are Whirling Triangles in the form of a very highly sophisticated and wonderfully orchestrated Musical Clock. For example, going from one side to the pyramid to another, and thereby changing the view as it were.

From there the SPI gave a target of 5252. But that was not realised at first take a look at this chart on the next page.

As you can see it then made "a" Tri-Rhythms up at 4156. Which told me the SPI was going up a long way however it was still part of the Tri-Rhythms down see the next chart.

Chart 6.1 Spi from Low to top of first Tri-Rhythms on the next page

# Chapter Seven: Cornerstone TriR's In Action

As you can see it was forming a lot of triangles, a lot of energy was being expelled to make this market move up, a lot of traders were heavily short and this all had to change in a majority before the market could move up.

**Chart 7.1 Spi from Low to top of first Tri-Rhythms**

# Chapter Seven: Cornerstone TriR's In Action

Chart 7.2 Spi The True Low on the next page

I did not realise then but when the markets change direction, the Square root factors change. However it is logical because resistance becomes support.

## **Chapter Seven: Cornerstone TriR's In Action**

Later it put in the 'c' Tri-Rhythm and so on it was later I learnt that the `c' Tri-Rhythm sometimes provides the `C' Tri-Rhythm.

An amazing discovery and invention. Now, within days of a Major turn, I can calculate out 4-5 years in advance and with accuracy and when the "C' Tri-Rhythm is formed I can calculate with pinpoint accuracy.

It eventually reached 5260 just 8 points out or a 99.98% success rate. Just a simple calculation and you get 99.98% success rate. Would you like that?

Let's look at it a bit closer. These targets were made when it became obvious to me (it took what I thought was a long while to learn this), but I suppose only 2.5 years into Trading full time is not long when you consider others over the last 230 years have not been able to achieve it!.

What the 'C' Tri-Rhythms were telling me is what the targets would be.

### **Chart 7.3 SPI 31012013 SPI**

# Chapter Seven: Cornerstone TriR's In Action

This chart above was from January 2013 when we were well into the Trend.

# Chapter Seven: Cornerstone TriR's In Action

After all you have to wait for the bounce and end of TriR 5m down (9TriRs in total) in this case below and the top of a TriR to determine the "C" Tri-Rhythm(s) or so I thought at the time.

As stated about I now know and prove in this book the minor '1c' sometimes provides the 'C1" target and from C1 the 5m or (9 TriR's) in total.

That does not mean you cannot trade it you can, but for the projections higher you need the '1c' TriR to project the "C1" to project the 5M TriRs.

Having said that, as said before the '1c' Tri-Rhythm will sometimes give you the target for the "C1" Tri-Rhythm which all will give you the targets for the 1, 3, 5 Tri-Rhythms in the 'M' (Magnitude) Tri-Rhythms.

You will need to refine for the market you are trading.

# Chapter Seven: Cornerstone TriR's In Action

Chart 7.4 SPI On the way up

As you can see from the chart on the next page it was doing what it was supposed to do. Notice I put a III Circled at the top (Chart 5.4) it had gone past my Square Root of 3 target which told me it was going for my Square root of 5 Target and that TriR's 4/5 of 3M were going to be small.

I now know that if the SPI goes past my target a square root target **by 21 points** or more it is heading for the next Square root target it has identified as **using previously**. Other markets may be a different number.

## **Chapter Seven: Cornerstone TriR's In Action**

This is very important also, it tells you it is going to take longer and it also provides you with great confidence, especially around the news times, because a markets turn they create the news for the talking heads. News 99% of the time follows the markets lead.

Therefore if you know the market is forming 3M (in wave theory terms wave 3 or in numbers #7 Rhythm) when the market reverse and go down you know it is nothing to worry about in the news and that the market must do this to put in a triangle to turn to the face of the shape it is forming or another side of the pyramid and go up another time.

You know all this because it went 21 points of more past your root targets days, weeks and months before!

Know what you are trading and do the reverse engineering to know the numbers.

I realised that what it turned out to be was that target of 5260 was Tri-Rhythm 3M of 5M of (9TriR's) up.

# Chapter Seven: Cornerstone TriR's In Action

If market analysts update their system and put this on their system I will only use my labels, until that time I will either use Ralph Elliot's or Write in Text the pages – my apologies for this **but I would rather show you actual charts rather than make them all 'clean'. I have done this to enable me to show you what to do and what to watch for and avoid from my learning and mistakes.**

## Chart at 7.5 3M completed in view SPI

# Chapter Seven: Cornerstone TriR's In Action

If you have been looking closely you would have notice that the time counts on the charts have been changing. This is because I have multiple charts for the index in order to see exactly what is going on, important for intraday trading.

As you can see from above the “C1” (labeled “A” in this chart TriR's is Triangle one labeled “T1” and Tri-Rhythms 1 & 2 is complete Triangle 2 (labeled T2) once we get to 4 Tri-Rhythms and target met, then we know its time for the market to reverse. Remember in numbers by the time the markets get to Rhythms 1M & 2M it has already completed 50% of the move and numbers 1-6 out of 9! Being 1c, 1t, C1, T1, 1M and 2M

That is what the SPI achieved on the 15th May 2013 a high of 5260 being the high of ‘3M’ Tri-Rhythms was on the 20th of May 2013 for the DOW JONES Industrial Average.

## **Chart 7.6 SPI not as complete.**

# Chapter Seven: Cornerstone TriR's In Action

In this chart you can see of note The 'C' Tri-Rhythms being (644 points not labeled) and the number 1440.

With the 1440 number as soon as I had calculated it I was 99.99% sure that the market was going to do 1440 points up. Why? Because 1440 is 10 times the square of 144. Which, for Fibonacci lovers is a Fibonacci number. But it is also the number mentioned in the Bible in Revelations. So I knew it was an incredibly important number.

# Chapter Seven: Cornerstone TriR's In Action

Notice that I am drawing the four but really 3.5 triangles (see chart 6.5), at this stage I was still practicing drawing them. Sometimes you draw them too quickly as previously stated. Half way through the fourth Triangle Rhythm (at its peak being 3M) the 15th May 2013 the market reversed and started a correction. I.e. It got to a corner of one of the sides of the shape it was tracing out, presumably a Pyramid but maybe not and reversed trends.

The 15th of May was a time target of Earth Neptune being 180 degrees from the 6th March 2009 low. This is the high level Time Cycle Analysis that I do for myself.

In other words in Mathematics 180 degrees, is direct opposition and therefore a very strong point in time and space under Gann Analysis and Bradley. F. Cowan. Meaning the market was approaching **STRONG OPPOSITION** to its advance.

The SPI making the High made on the Friday the 9<sup>th</sup> November 2013 New York time The market made a high of 5,464 on that date which is probably the high.

Possible 5 M or 9 High on a one minute chart for the SPI chart below

# Chapter Seven: Cornerstone TriR's In Action

Chart 7.6a SPI High at 5,464

In this chart, at the beginning of TriR 5M, I have used the C1 to tell me the targets. During this time the US Government shut down and other things were happening, I don't really know what as I was not watching the news. When the markets reversed I was told that I had it wrong and that the market had made a big move against my targets.

# Chapter Seven: Cornerstone TriR's In Action

One I just ignored but another trader, using all the indicators and the Wave principle first asked my advice and I said that the UP target is either 5429 or 5491. He told me that I was wrong. I, being less understanding than usual on that day, asked why he kept asking for my advice only to tell me I was wrong.

I knew I was not wrong for two reasons; as stated above the market had moved past my targets by more than 21 points and therefore was heading for the next one yet to be made and it had not put in triangles as yet and therefore this must have been to me another triangle being formed before the markets can turn.

It turned out that I was correct. Although I am grateful because I changed my advertising that was about to commence from 99% accuracy to 95%.

Hence the two charts - one showing the targets and another showing the completion.

Remember:

I had not looked at any indicators  
I had not looked at any moving or multiple moving averages (who wants to be average anyway)?

# Chapter Seven: Cornerstone TriR's In Action

I had not watched the news  
I had not do tried four dimensional analysis on it AND  
I had not tried to time it down to a four minute window  
I had not used Astrology or Astronomy  
I was not subscribed to any expensive monthly  
subscriptions

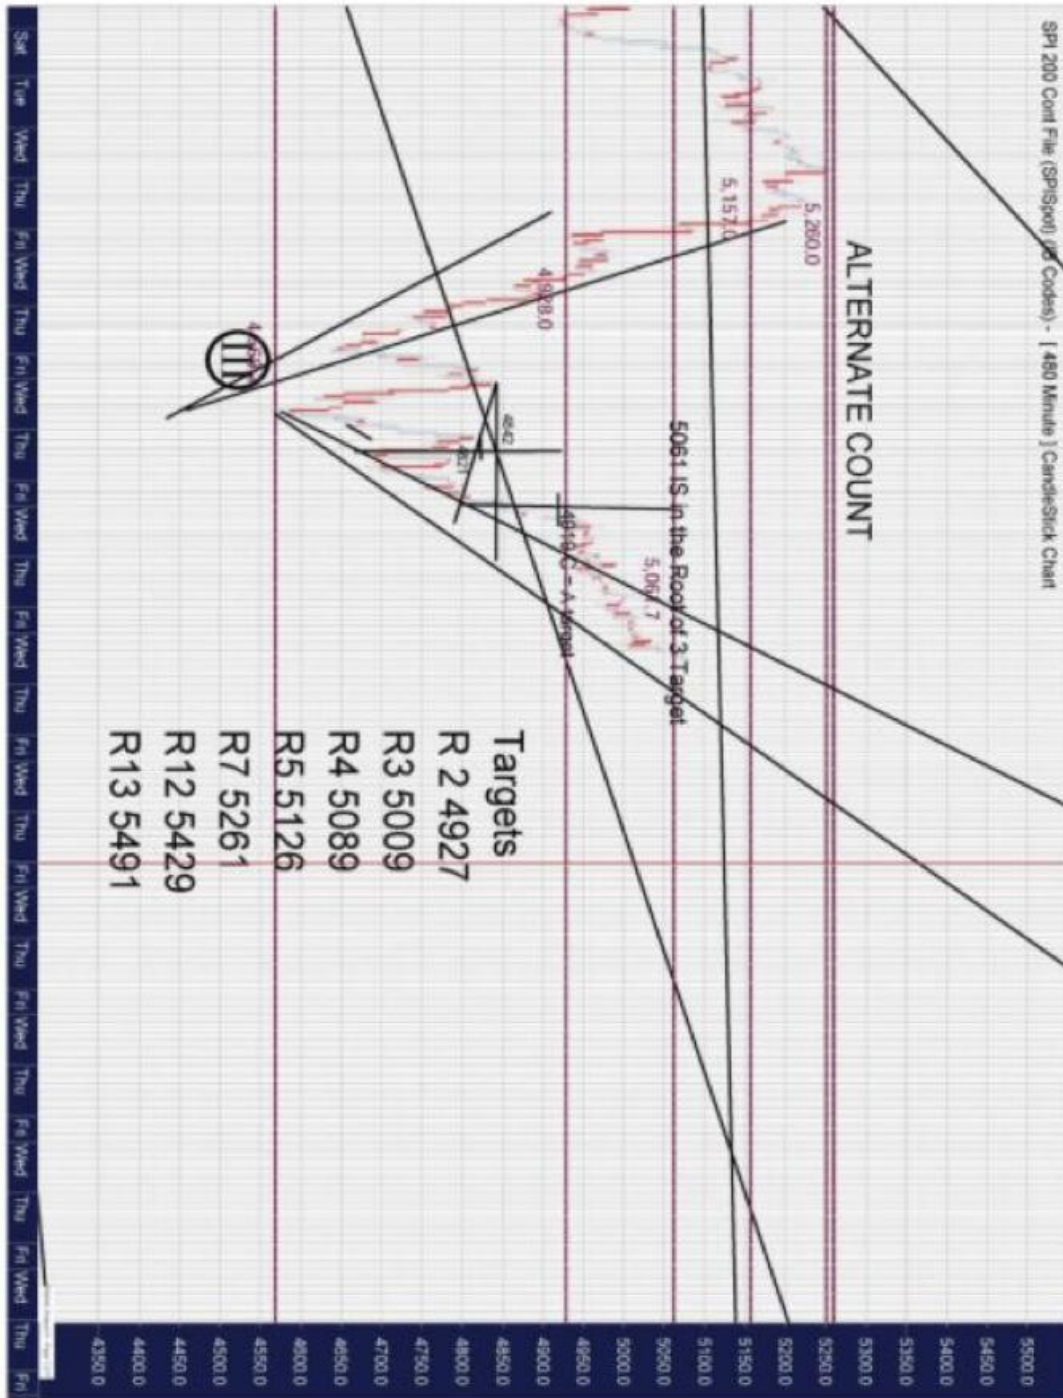

**BUT**

I just knew my target had not been met the target the  
market gave me AND; therefore there was nothing to be  
concerned about.

With the chart 7.6b I finally put the figures on the chart  
on the 3<sup>rd</sup> of August 2013 although I had already had the  
for some time. In fact from the time when I had the  
figure 4,927.

# Chapter Seven: Cornerstone TriR's In Action

Chart 7.6b Last TriR 5 up projections

# Chapter Seven: Cornerstone TriR's In Action

## Chart 7.6c Zoomed our view of SPI

Zoomed out view of the whole trend up to the high of the 9<sup>th</sup> November 2013.

# Chapter Seven: Cornerstone TriR's In Action

Wouldn't you like to be 99.9937% correct? Over a period of almost 9 months that was the 3M target with the 5M target up until the 13<sup>th</sup> November 2013 I am 99.9895% correct.

How about correct over a period of 4-5 years with a 99% accuracy? We are showing you how to do it and in the next chapter we will restate to you the actual calculations.

Another example this time using CMC Intraday trading.

In the first example an intraday chart on CMC Dow 30 as it was at the time.

I quickly measured the "C" TriRs and made a projection 11,642 for the 11th October 2011. The Market went 6 points above my target, which was a success rate of 98% accurate for the day. You can see that I drew the purple lines as reference for myself and just imagine the other two lines of the triangle and just times out the points to get the target.

## Chart 7.7 CMC Up Trend Intraday

# Chapter Seven: Cornerstone TriR's In Action

In the second day trading CMC Chart 7.8, this time on a correction the target was 11,624 for the 13th October 2011. On this day the DOW 30 hit exactly on close. 100% correct and I did that calculation in less than a minute.

## Chart 7.8 CMC up

# Chapter Seven: Cornerstone TriR's In Action

You can do the reverse engineering on this or any chart if you wish, you will see how then to work the charts backwards to get the targets.

I highly recommend that you do this on your charts and reverse engineer them. Note the high or the low and work them out backwards, to give you the numbers (formulas) the charts are using for what you are trading.

# **Chapter Seven: Cornerstone TriR's In Action**

More examples with a 97.5% accuracy here  
<http://www.youtube.com/watch?v=6ovBEc8VMrw&feature=share&list=UUubf-dxkD0gyGx8dPwP3e5w>

Now let's move revise the actual technologies & calculations.

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

First a quick review on Tri-Rhythms - 'Going means returning'.

***Is there anything whereof it may be said, See, this is new? It hath been already of old time, which was before us*** Ecclesiastes 1:10 KJV

In figures 3.3 and 3.4 you can see from the above and stated before the '1c' and 'C1' and '1t' and 'T1' TriRs are what connects the Tri-Rhythms together.

You cannot have Magnitude TriRs without a Trajectory TriRs and vice versa you cannot have a Trajectory TriRs down without the connection of the Cornerstone TriRs to the next Tri-Rhythms.

Why only almost use .382 or 1.618 or .618 etc., and other Fibonacci sequence numbers? You have triangle rhythms on your screen so you use a spiral calculation to find out the targets the vast majority of the time. Also, don't forget that Fibonacci 1.618 works on in (Elliott Terms) Wave One, which is 50% of the move. If not stated before, you have to wait for 50% of the move to be over to know what it is going to be.

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

No wonder many gave up or give up. That's like putting a square object into a circle shaped hole - something we all learned not to do when playing as toddlers.

People/ Brokers don't use the Tri-Rhythms for targeting because they do not know the numbers and how they work so they use the wrong calculation and say things like 'almost right' and they are trading your money.

Let just look at another chart to drive home what I am saying in an illustrated way.

**Chart 8.0 SPI 4<sup>th</sup> October 2013**

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

As you can see in chart 8.0 above the Fibonacci target from my C1 high was 730% a figure that is almost never quoted. However if you apply the Fibonacci expansion took from the low with the high at bottom of in Wave Theory Terms wave 2 and the Extension on at the top of wave 1 which is 50% from the low the target is 5,494 at 1.618%. However you had to wait until the move was 50% over to find that out! **That means for the first 50% of the move you had no idea where it was going!** Can you really trade like that?

Now in Chart 8.1 the DOW JONES INDUSTRIAL average we set the Fibonacci tool up how Wave Theory would have it applied. Monthly Chart.

Interesting now but at the time, I was very upset, that in 2010, I was a subscriber to the Elliot Wave Principle daily updates for USA, EUROPE and ASIA, and they were point blank saying the market was going to crash. Which it did not and has still not hit its highs three years later. That was at what I labeled 2M now. You notice that on the chart I have labeled 1c, 1t, C1 and CT and 1M. Wave Principle had counted them as waves 1, 2, 3, 4, 5 and we were going down for the 5 waves in C to Oblivion. Off course we did not. Or would have waited for 1M to form and discount the other 50% of the move up.

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

In fact Elliot Wave Principle says we do not count the minor waves just the five up and an ABC correction making eight, as explained before. If they had counted them properly or differently instead of disregarding the waves which is easy to tell they were present even in charts wave back in the 1960s & 70s and proven in 1909!

They disregarded, and still do, these waves, as they call them and what I now call Cornerstone Tri-Rhythms. If they had counted them other than the basic 1, 2, 3, 4, 5 then they would not have been wrong for the last three years and counting. They would not have cost me, my clients and tens of thousands of people worldwide the hurt they may have caused.

They called for the crash because they, and many others, had **no idea** where they were in the markets. They were only using one reference point along with volume and a kilter indicator etc., they were not using mathematics not that, that mattered really, why?, because they discounted the Tri-Rhythms 1c, 1t, C1 and T1, (a, b, and A, B) and disregarded them. **Rejected the cornerstone(s)**. Thereby, rejecting the **true mathematics** and rejecting the **Cycle Analysis** as well in a very big way. When they were calling for the crash in June 2010 it was 15 months after the low, it is now October 2013. It is now 55 months from the March 09

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

low  $15/55 = 0.27$  which is  $\frac{1}{4}$  or close enough correct as per my mathematics showed in chapter 3. When you **disregard the cornerstones** and Trajectory Tri-Rhythms at the beginning of the trend you end up being right only 25% of the time or wrong 75% of the time. When finally recognizing that it was a “wave 1 and 2” according to Wave Theory terms and then applying the Fibonacci tool to get a 1.618 target at 16,322 on the index. Why have all the brokers been calling for tops all along that time, including myself at times, until I learnt the **TRUTH**. The answer is easy really and it was spoken by Lord Kelvin in 1883 and quoted below.

## *Lord Kelvin*

What’s my quote to back my thoughts? Simple as stated by Lord Kelvin a Scottish physicist as said in 1883.

*‘I often say that when you can measure what you are speaking about, and express it in numbers, you know something about it; but when you cannot express it in numbers, your knowledge is of a meager and unsatisfactory kind; it may be the beginning of knowledge, but you have scarcely, in your thoughts, advanced to the stage of science, whatever the matter may be.*

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

*Lecture on "Electrical Units of Measurement" (3 May 1883), published in Popular Lectures Vol. I, p. 73; quoted in Encyclopedia of Occupational Health and Safety (1998) by Jeanne Mager Stellman, p. 1992*

What a wonderful quote, 'if you cannot express it in numbers, your knowledge is meager & unsatisfactory'.

Which is backed by the bible when it states that all things are numbered, even the very hairs on your head!

How can the market Analysts, Stock brokers, Economists and Advisers not using the rhythms for projection of targets or even just label them correctly.....?

I think Lord Kelvin says it all. **'but you have scarcely, in your thoughts, advanced to the stage of science, whatever the matter may be.'** And I was once in their boat and sinking fast!

They say it's pattern recognition for example. Learn the patterns the market makes. There's a whole Encyclopedia of them! Got time to learn it? I think not. I tried to learn it – it's too hard.

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

**What I am saying is just learn to draw a triangle and assess it, calculate and project your 'm's' or 'M's' Magnitudes and watch the market go there!**

They companies that offer subscription services do not offer targets because they will lose their subscriptions. Why? They have scarcely in their thoughts advanced to the stage of science in the matter of the markets! They do not get it right! Although they probably will after they have read this book.

**Chart 8.1 the DOW JONES INDUSTRIAL**

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

**What we do is measure and we get a target using the Tri-Rhythms.**

1. What we need to do is find what we are going to trade. Once that is done, find the last top or low on a daily chart. Then go down to an hourly chart for example.
2. Now let's assume we have just finished a down trend be day's weeks, months, years, hours or minutes or tick.
3. Find the end of the down trend and mark the bottom Tri-Rhythm with a number 5M (it should be M & 9 TriRs) i.e. (either 9 or 5M or wave 5)
4. Next wait or find the "1c" and if Trend is already in motion on the time frame you are trading the "C1" TriR up. See figure 6.1 below

Notice we have come to a bottom on TriR down, when the target is met I take profits and quite often just reverse the trade.

5. I then wait for the "1c" TriR to identified, notice the number of TriRs to get to "1c" TriR. Notice there is 9 Tri-Rhythms to get to '1c' and 9 to get to "C1" TriR.

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

6. Then I do the calculations mark the answers on the chart, particularly if I am playing a long term chart as in days weeks or months.

The “T” TriR will take a bit of time unless you are trading small intraday periods.

Once I get the “T1” I put the trade on at the low of the 1t or T1 or at the bottom of the 5M (9TriRs) .

Now what you need to do, but should have already done by now, is measure the number of points or Dollar or Euro or Pound, Yen, Rubble and Yuan etc value that you are using from the bottom of TriR 5M to the top of TriR C1, or on down trends from the Top of TriR 5M to the Low of TriR C1.

Once you have that it is a simple equation of the square root of 2, 3, and 5 etc (or whatever the market is using that you are trading (do your reverse engineering)) of Tri-Rhythm ‘1c’ to get ‘C1’ and then “C” to get the targets for Tri-Rhythms 1,3,5 of “M” of CTM up or down at 5M (9 TriRs), be it whatever the thing is that you are trading be it currencies, oil, gold, bond’s, indexes or stocks or whatever. As stated below it 1c’s and 1m, 3m, 5m, (C1) will not always provide the exact targets for 1M, 3M and 5M which is why you must do the reverse engineering.

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

It may be that the correct number is Root 2+. Root 2 is 1.414. Root 2+ may be 1.424 which is in the Root of 2 but not in the Root of 3 being 1.732.

See notes on the pyramid to get the idea that is not the exact root numbers the markets may be using.

For Down Trends the Root Factors will be higher due to less time component so with the market you are trading start with Square root 5, 7 and 12 or 13 and refine from there.

Do the reverse engineering and you will find the square root numbers for the market you are trading and do not leave out the if you wish Fibonacci numbers of .382 .618, 1.618, 2.618 as sometimes they may be correct as shown in chapter up to 1 in four can be correct and probably at the end of the sequence when the circle MUST be squared out with the beginning of the sequence.

In reality 'c' can at times to give you 'C'

1m of 1c can be times out to give you 1m of C1 target and you times that out to give you 1M TriR target.

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

- 3m of 1c can be times out to give you 3m of C1 target and you times that out to give you 3M TriR target.
- 5m of 1c can be times out to give you 5m of C1 target and you times that out to give you 5M of 9 TriRs target.

Therefore very early (within days of the **MAJOR** turn) you can potentially have the targets for a whole cycle that might last for 5 years and I prove this in Chapter 16 Training Mode on the DJIA!

**Even experience traders have never heard that before.** I certainly have never read it in the hundreds of stock market books I have read, DVD's, websites, you tube videos, webinar's watched and conferences attended.

Let use the example above in Figure 5.3, always better to use a live example. In this case the SPI.

**Figure 5.3 shown here for reference**

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

Figure or chart 5.2 had a low for Tri-R 5 of M (total 9 Tri-R's) down to 3,816 and a "C1" Tri-R up of 4,460 difference being  $4,460 - 3,816 = 644$  being the difference  $5M - C1 =$  number to square root.

Square root of two is 1.414

Square root of three is 1.732

Square root of five is 2.236

Now take the 644 and times it out

Square root 2 is  $644 * 1.414 = 910$

Square root of 3 is  $644 * 1.732 = 1,115$

Square root of 5 is  $644 * 2.236 = 1,440$

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

Notice 1,440, which is 10 times the square of 144. When I saw this number I was instantly confident that this would be achieved, I however did not expect it to be fast and it wasn't, however it got to my target, or really the market's target, because the market wrote the target in the form of a chart based on mathematics, it just simply complies with God's Law of Vibration and Harmony. And now you can follow it quickly and instantly and all the rest is made a little bit easier.

I say this because you will still have to overcome your emotions, the urge to jump in before time the want to lock in a profit and so on. I still have to control me as well.

In reality square root of the value of C1 being 1440 for a 5252 target notice for some reason I was 4 points yet  $1440 + 3816 = 5256$ ! I could have been four points out on my charts and explaining this to you instead of eight. What a pain! If only I was only eight points out in 2010! Notice that it was in reality only 3M from 5M (9 TriRs)! **What did I do wrong?** Well I explain it to you in a few easy words. I DID NOT DO MY reverse engineering!

## **Chapter Eight - Tri-Rhythms the Technologies & Calculations**

You will remember that I thought the low on the SPI was 3990 and I was over 99% correct, but later it moved down to 3816. I had missed something while I was learning and never went back to check it out. If I had done I would have realized to have the higher square root numbers applied to the 1c and C1 Tri-Rhythms. I did not calculate out the full potential.

I traded on the way down and as it formed triangles it was telling me the trend was changing I closed the trades and waited. What I did was wait for the 1c and C1 of 5M of (9TriRs) up to form, measure them and apply my targets from there, as explained you can do in Chapter 3.

You can do the same for the 'ctm' and 'CTM' Tri-Rhythms, however when you become proficient you will probably just reverse the trade and increase your profits even greater.

I have not focused on the '1t, T1, 2m and 4m' Tri-Rhythms. I am sure there will be some formula that could be used by gathering the intelligence of what "2m & 4m" of 1t and "2m & 4m" of T1 to provide countertrend targets for the Magnitude TriRs 2M and 4M. To be able to know that up to 5 years in advance would also wonderful and very rewarding. However if

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

you get them right in one direction to start with the rest becomes easy anyway. I will try and work it out how to know them exactly from 1t and T1.

If you have control on all of the above mentioned then Tri-Rhythms followed correctly will make your trading very easy, and profitable indeed..

7. The next step is to take the Low or High of TriR 5M (9 TriRs) and add on the Square Root numbers. You need to do all three because at the moment you do not know which one the market will ultimately observe. Therefore:

$$3816 + 910 = 4726$$

$$3816 + 1,115 = 4931$$

$$3816 + 1440 = 5256$$

At the time most thought the markets were going to down, however counting the TriR told me the Market was turning. The fact that the "C1" Tri-R's were large 644 points told me the market was going up a long way and it did.

## Chapter Eight - Tri-Rhythms the Technologies & Calculations

It got to 5260 so if I had taken the slightly higher TriR I would have been 4 points out instead of 6. 4/1440 would have been 99.9972 correct talks for its self about accuracy.

If you're wondering why I am mentioning it so much, it is because most brokers apparently say and I have heard them in client interviews that if you can get 65% right then you are doing well! 65% success rate is good?

I am sorry but that is not good enough to trade. Why go to work and put orders on the **market with only a 65% success rate?**

If you Google 'most brokers lose 95% of the time' there are an enormous amount of reports about this yet I could not find the study that actually showed this to be true.

However I did find Johnson report on Day Traders small sample size however it showed 75% of traders lose money while the professional traders better than others still lost 2/3rds for the time.

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

It is quite reasonable to me knowing what I had to learn and how much rubbish I had to discard to get to a kiss principle. Keep it Simple Specialist!

Now that I have shown you a very simple way of achieving over 95% I hope you take the route that works and keep it and use it. After you have completed the above, mark the targets on your charts. After this and assuming you have your trades in place and auctioned, you need to wait for the market to move and apply your trajectory lines to ZERO in on the possible resistance and timing points that the markets provide you with just by drawing a line!

You can observe this in Figure 7.0. This is simple timing. Markets do not always go for the Square Root 2, 3 or Root 5 targets. This is because it may be a Trajectory TriR and the target is the Square Root of 2+ or some other equation. Example of this is in Figure 7.0.

I expected the market to crash as well (lack of the right knowledge at the time). But it didn't. It only went two points below my root two targets, which was another indication to me it was turning, but looking at the TriR and counting the triangles I could see the market was turning and I took profits on the SHORTS and went LONG.

## **Chapter Eight - Tri-Rhythms the Technologies & Calculations**

LONG means you are expecting the market to go up. SHORT means you are expecting the market to go down). You can make money in both directions of the market.

This is not against the Law and it is not against the Law of Vibration and Harmony either. It is actually what helps the market obey the law of vibration and Harmony.

If you could only BUY then everything would be so expensive after a while you may as well not bother.

Cycles, Tri-Rhythms, Rhythms, business cycles, are all part of the Law of Vibration and Harmony. Imagine if they were not, the planets would just go past us instead of an oval trajectory around the Sun. God set cycles for the good of his Universe and cycles are good for us, if we learn of God and his ways and take notice of his warnings, like the 666 warning cycle or TriR among others then life is and will be a lot better for each of us.

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

If you think the planets and moons don't affect us then, for a very small example, why do people fish on certain moons only?

Read my book 09/24/2017 you will find a chapter on the cycles and mathematical proof that Pluto Squares out Australia's whether.

Figure 8.5 is a chart of the SPI drawn on a daily candlestick chart. Where the one in 8.2 is a 999 minute or 16.65 hour chart.

You can see in Chart 8.5 the four Tri-Rhythms (3.5) really. The market hit its Square root target number of 5260 in the end then reversed, which by then I had realised it was 3M up of (9 TriRs).

Also notice that the last triangle of the T3 before the high 5260 top was form which would have been T4. Notice how the possible "T4" (high of 5260) if I had labeled it would have been much smaller to the other T1, T2 and T3 Triangles, this is a good indication of counting too fast and that something else might be going on.

## Chart 8.2 SPI Daily Chart

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

Top of 5260 at 3M T4 would have been too small and too quick to be right

Below I decided to insert a complete Tri-Rhythms drawing up trend only. To show you how I would have the 9 TriR's completed in my head and on the chart. Well at least in my head!

# Chapter Eight - Tri-Rhythms the Technologies & Calculations

Drawing 8.1 Finished TriR with extra lines labels completed

# Chapter Nine - Tri-Rhythms as Sound

In his book *Four Dimensional Stock market Structures and Cycles*, Bradley Cowan spends some time proving that the cycles or more correct rhythms of the planets and vibrations are the same as sound frequencies and therefore the same frequencies are in the Tri-Rhythms of the markets. I decided to test what he was saying and below are the results

Chart 9.1 Below

## Chapter Nine - Tri-Rhythms as Sound

O to A was 284 points ( $2*144$ ) Square of 144

Revelations

O to B was 253 ( $2*144$ ) less a bit

Difference A & B was 146 points ( $1*144$ )

OB time was longer so less points to keep Constant

A to A was 72 Hours ( $144/2$ )

B was 84 Hours therefore

O to B was 156 hours ( $1*153$ ) (153 fishes / Rhythms)

Hours – Musical  $5/4$  is ( $72/84$ ) Key of E

O to C was 397 Points

A to C was 212 points

B to C was 246 points

B to C was 199 Therefore

O to C was 355 hours ( $156+199$ )

Musical Vibration

O to A 72 hours = Fundamental 1 key of C

$72/199 = 0.36$  or  $3/1$  Twelfth – key of “g”

$84/199 = 0.42$  or  $21/50$

$156/199 = 0.78$  of Major Third Key of “E”

## **Chapter Nine - Tri-Rhythms as Sound**

Above is a small example proving what Mr. Bradley Cowan is claiming, there is Sound / vibration in the markets and this proves it on the Australian Sydney Price Index - SPI.

This also proves again it is the Law of Vibration & Harmony in control

# Chapter Ten - Trading Intraday Tri-Rhythms

Using Tri-Rhythms on a small time frame and day trading will present some challenges. However as I have shown it is possible.

The thing about day trading is you could have multiple TriR's in opposite directions. So entry is critical.

Firstly you must check the overall Tri-R Trend.

Then, check back a few days to see exactly where the market that you are trading is up to in its TriR.

The problem and yet the solution you will have is that Time and Price are linked.

The smaller the time frame you go down to, the faster the price action. This will mean you will potentially need a higher Square Root calculation factor and especially on days when market moving announcements are made. You will, or may need, a much higher Square Root number.

I cannot give you all the numbers in this instance as they will be different on each market. This also applies to the Daily, Weekly and Monthly charts.

You will need to find out the numbers your market uses or has used in the past,

# Chapter Ten - Trading Intraday Tri-Rhythms

to give an indication & formula or Square Root factor to multiply the minor 'ctm' Tri-R's by to estimate the "CTM" and M Tri-R's.

Now that you know how the Tri-Rhythms work, how to use them & very simply to make a profit and trade with confidence the rest is easy subject to your emotions.

It just takes a little bit of practice, and a lot less practice than pattern recognition, using multiple moving averages and a whole host of different indicators and thinking like an accountant to work out the fundamentals, all of which I now consider just a distraction and for the most part a waste of time, from what the chart is already telling you.

# Chapter Eleven - Tri-Rhythms change rhythms

As cycles change in the solar system due to the planets elliptical orbits so do the rhythms change in the Tri-Rhythms of the markets.

Tri-Rhythms change from up to down and vice versa. When this occurs on a major rhythm cycle all the calculations change, both short term and long term and the fact that speed of planets that are in focus of influence on the market you are trading have either sped up or slowed down.

Below in Chart 11.0 is an example of the SPI I was trading on the down side in May 2013.

The cycle changed to down. The square root numbers of 2, 3 and 5 that I measured become almost irrelevant.

My targets measure from the “C1” (named “A”) Tri-Rhythm were:

Root 2 Target was 5101

Root 3 Target was 5065

Root 5 Target was 5008

As you can see in Chart 11.1 it respected the Root 3 target almost and then carried on down.

# Chapter Eleven - Tri-Rhythms

## change rhythms

Another indication speed had changed is that the descending line I drew was way to slow for the market. Time if you like had sped up and therefore price movements became much larger.

The fact that the SPI market was now using the old square root numbers as resistance when previously they were used as support is interesting, informative and helpful.

All I have to do now is work out the new square root numbers the market is using and use them as targets and the old square root targets as resistance. So if I am trading intraday for example I can reasonably expect what is going to happen and maximise the trading if I wish to.

It is hard to see on the chart 11.0 however the first Tri-Rhythm of the “minor 1c” Tri-R was at 5232 just 28 points. (not Labeled)

Which at the square root of 14 provides the target of 104 ( $28 * 3.741 = 104$  points take that from the high of 5260.  $5260 - 104 = 5156$ . The index got to 5156 for the “C1” Tri-Rhythm (labeled ‘A’).

# Chapter Eleven - Tri-Rhythms change rhythms

Chart 11.0 Spi Change of Square Root factors

The next Tri-Rhythm 1m. Take “C1” which 104 points times that by 1.915 in the Root of 3 ( $104 \times 1.915 = 199$  points deduct 199 from 5260 high ( $5260 - 191 = 5,061$ ).

Next 3m Take C1 (104 points) times that by 3.193 which is in the Root of 10 ( $104 \times 3.193 = 332$ . Take 332 from 5260 = 4928

# Chapter Eleven - Tri-Rhythms change rhythms

Next 5M. Times 104 by Root Factor 6.683 (in the Root of 44+) = 695. 5260 high – 695 = 4,565 Low. Not shown.

Now I know the cycle is changing or changed I will know to apply the new numbers on the next decline to increase the Targeting Accuracy and therefore Trading profits when one trades.

**Spi Chart 11.1 below**

# Chapter Eleven - Tri-Rhythms

## change rhythms

The charts of 11.1 and 11.2 show you I knew how to overcome the problem of a cycle or Tri-Rhythm change that had caught me off guard a little, as previously explained.

This book is about the Cornerstone Targeting Trading Accuracy using the NO:1 Market Top Secret. It is not about one's own Trading or anyone's trading accuracy, including mine.

There are too many variables to that. Even Gann said he won and lost his fortunes **many** times learning what he learnt. However if you can control your targeting you can make everything else easier for you.

This book is about the using the Cornerstones and therefore the Triangle Rhythms of the Law of Vibration and Harmony to improve one's Targeting Accuracy and therefore their own Trading accuracy over time.

To me the pyramid is the holy grail, to have lasted some 5000 - 12,000 years according to new scientific evidence, (who knows how old it is, I do not) with its capping stones missing, revealing the steps when one looks a chart one can imagine the steps if you will.

Measuring the capping stone / Cornerstone provides you with the angles (Trajectories) you need for the slopes

# **Chapter Eleven - Tri-Rhythms change rhythms**

and it is the same with the markets. Measuring them for the length of the trend is my discovery and invention and it provide you with incredible accuracy up to five years in advance and may be longer, if you have the data.

# Chapter Twelve - Triangulation

## *No:1 Market Top Secret is* ***Triangulation***

And I Barry D. G. Gumm discovered it.

Here is the link to Wiki page for Triangulation however I will edit below.

<https://en.wikipedia.org/wiki/Triangulation>

In trigonometry and geometry, triangulation is the process of determining the location of a point by measuring angles to it from known points at either end of a fixed baseline, rather than measuring distances to the point directly (trilateration). The point can then be fixed as the third point of a triangle with one known side and two known angles.

(Bottom or Top of (5M - 9 TriRs) and the top of 1c or C1).

Triangulation can also refer to the accurate surveying of systems of very large triangles, called triangulation networks. This followed from the work of Willebrord Snell in 1615–17, who showed how a point could be located from the angles subtended from three known points, but measured at the new unknown point rather

# Chapter Twelve – Triangulation

than the previously fixed points, a problem called resectioning. Surveying error is minimized if a mesh of triangles at the largest appropriate scale is established

First. Points inside the triangles can all then be accurately located with reference to it. Such triangulation methods were used for accurate large-scale land surveying until the rise global navigation satellite systems in the 1980s.

(This is basically what we are doing by measuring the all the sub Tri-Rhythms of 1c and C1).

Triangulation today is used for many purposes, including surveying, navigation, metrology, astrometry, binocular vision, model rocketry and gun direction of weapons.

The use of triangles to estimate distances goes back to antiquity. In the 6th century BC the Greek philosopher Thales is recorded as using similar triangles to estimate the height of the pyramids by measuring the length of their shadows and that of his own at the same moment, and comparing the ratios to his height (intercept theorem); and to have estimated the distances to ships at sea as seen from a cliff top, by measuring the horizontal distance traversed by the line-of-sight for a known fall, and scaling up to the height of the whole cliff.

## Chapter Twelve – Triangulation

Such techniques would have been familiar to the ancient Egyptians. Problem 57 of the Rhind Papyrus a thousand years earlier, defines the *seqt* or *seked* as the ratio of the run to the rise of a slope i.e. the reciprocal of gradients as measured today. The slopes and angles were measured using a sighting rod that the Greeks called a *dioptra*, the forerunner of the Arabic *alidade*.

A detailed contemporary collection of constructions for the determination of lengths from a distance using this instrument is known, the *Dioptra* of Hero of Alexandria (c. 10–70 AD), which survived in Arabic translation; but the knowledge became lost in Europe. In China, Pei XiU (224–271) identified "measuring right angles and acute angles" as the fifth of his six principles for accurate map-making, necessary to accurately establish distances;[3] while Liu Hui (c. 263) gives a version of the calculation above, for measuring perpendicular distances to inaccessible places.

### *Gemma Frisius and triangulation for mapmaking*

On land, the Flemish cartographer Gemma Frisius proposed using triangulation to accurately position far-away places for map-making in his 1533 pamphlet *Libellus de Locorum describendorum ratione* (Booklet concerning a way of describing places), which he bound in as an appendix in a new edition of

# Chapter Twelve – Triangulation

Peter Apian's best-selling 1524 *Cosmographica*. This became very influential, and the technique spread across Germany, Austria and the Netherlands.

The astronomer Tycho Brahe applied the method in Scandinavia, completing a detailed triangulation in 1579 of the island of Hven, where his observatory was based, with reference to key landmarks on both sides of the

Øresund producing an estate plan of the island in 1584. In England Frisius's method was included in the growing number of books on surveying which appeared from the middle of the century onwards, including Willima Cunningham's *Cosmographical Glasse* (1559), Valentine Leigh's *Treatise of Measuring All Kinds of Lands* (1562), William Bourne's *Rules of Navigation* (1571), Thomas Digges's *Geometrical Practise* named *Pantometria* (1571), and John Norden's *Surveyor's Dialogue* (1607).

It has been suggested that Christopher Saxton may have used rough-and-ready triangulation to place features in his county maps of the 1570s; but others suppose that, having obtained rough bearings to features from key vantage points, he may have estimated the distances to them simply by guesswork.

**Picture 12.0 See Island Survey**

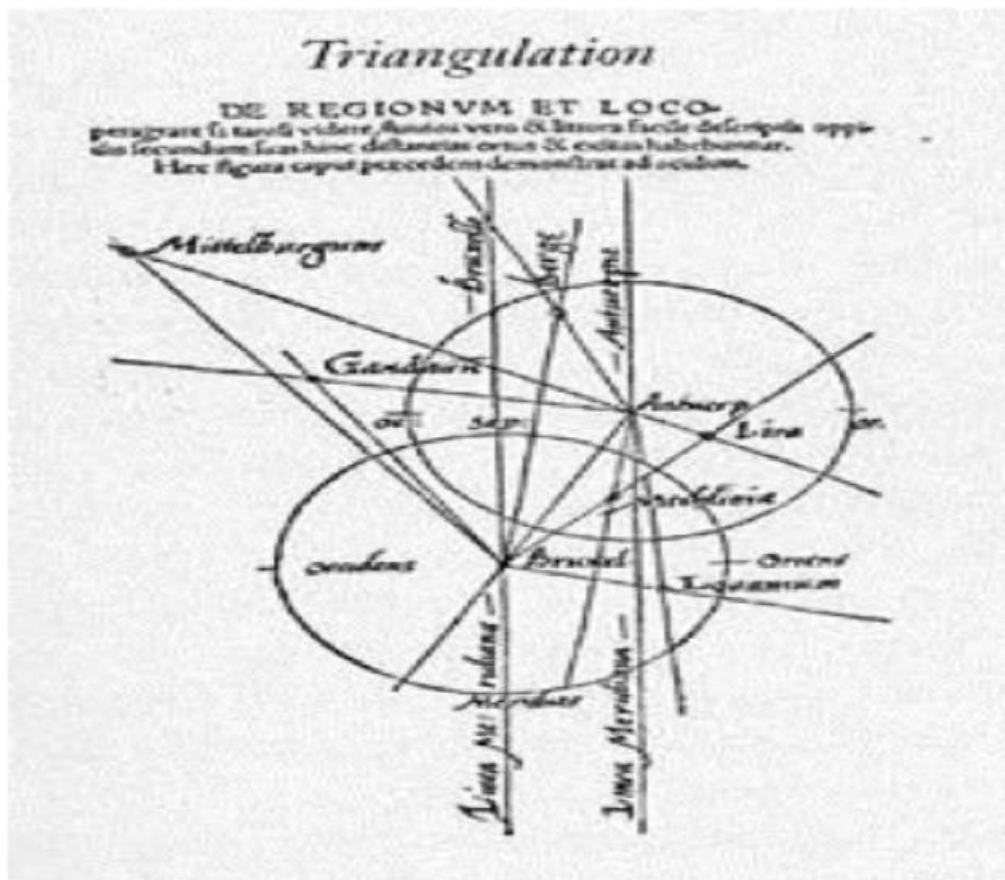

# Chapter Twelve – Triangulation

As you can see visually in this picture above 12.0 by taking two measurements one is able to determine the height or depth of a Trend of the markets, this visually illustrates why the 1c and C1 Tri-Rhythms are so incredibly important in the markets. They are the hypotenuse of the length of the trend, times them out and you get the targets, targets so accurate it is simply incredible oh and by the way **Barry Gumm discovered it in relation to Financial Markets!**

**Picture 12.1 Triangulation**

# Chapter Twelve – Triangulation

Triangulation a complicated view, lucky we have computers today! However this shows how a triangle and a circle come together to achieve pin point accuracy in the markets. Thank fully the markets gives us the two points we need be them the (9 TriR's and the high or lows of 1c and C1.

We just draw a line or two for the angle / Trajectory and calculate the distance using the square root numbers or your back testing numbers and away you go with incredible accuracy not previously known in the markets

## Chapter Twelve – Triangulation

for the last 230 years & 1000 years for wheat! Barry Gumm discovered it in relation to Financial Markets. This next picture is just great!

### Picture 12.2 Triangulation Network

Start drawing the lines by connecting the points together on the financial market charts and you start to get a picture like this one above. Notice the squares and rectangles in the back ground, add the curvature or Trajectories of a circle and you have it all squared out as per the drawing in Chapter one.

What a great picture this one is. I love it. It is just like I have been drawing for the last 3-4 years. If only I had known a bit about surveying, I could have cut the

## Chapter Twelve – Triangulation

learning time down significantly for 2.5 years to a few days, **like you can now with this information.**

Oxford Dictionary put the word Triangulate this way.

1. [WITH OBJECT] DIVIDE (AN AREA) INTO TRIANGLES FOR SURVEYING PURPOSES.
  - a. Measure and map (an area) by the use of triangles with a known base length and base angles
  - b. Determine (a height, distance or location) by triangulating an area.

### ***Secret to the Markets***

Gann said the markets are always trying to find its center of gravity; basically the markets are doing this by a process of Triangulation or Tri-Rhythms.

**Secret to the markets IS Triangulation. Triangle Rhythms – Tri-Rhythms.**

That is the first major secret (out of three) to the markets work that out and you have the ability to target very accurately indeed as I have shown you. All you have to do is draw in the missing lines to get the triangle and multiply out the numbers the markets provide you.

# Chapter Twelve – Triangulation

\*Triangulation today is used for many purposes, including surveying, navigation, metrology, astrometry, binocular vision, model rocketry and gun direction of weapons **and now thanks to Dr. Barry D G Gumm discovery now Financial Markets as well.**

\*quote taken from Wikipedia

If fact when you search on GPS, Satellite Navigation, GPS Internal locators there is a mountain of information on Triangulation. Remember the Scripture quote on 4 dimensions. To pinpoint your location 4 satellites are use. 3 for positioning and one for time – being the fourth dimension and is the breadth dimension mentioned in scripture.

## **Spi chart 12.3 Triangles.**

Now here is an interesting chart showing how I have drawn the triangles to help determine exactly where the Tri-Rhythms were in their formation.

This chart illustrates that you can count too fast. It also illustrates that you can count the Triangles to the turn of smaller TriRs within the larger TriRs. While I was inventing and discovering the technologies now in your hand I used to find this helpful and I still do this to make sure I am referencing two points at least to know exactly where the market is.

# Chapter Twelve – Triangulation

**Chart 13.4 More Triangle Drawing**

As you can see below I was paying a lot of attention to this turn in the markets. This was because the spi shot through the usually Root 2,3 and 5 targets it had 'obeyed' if you will for the previous 8-9 months, and it had caught me off guard as it were. I was in good profits, and had exited just before the low of T3 (3M TriR), but because I had not done my reverse engineering, I did not know 'new' the numbers the market was using.

They were not new to the market but rather I was new and did not know.

# Chapter Twelve – Triangulation

As you can see I nailed it, but only because I was well experienced at this point, I warned others that the market was turning up but they held SHORT. That was June and early July and it is now October 5<sup>th</sup> as I write this and, to my knowledge, they are still short the money they made on the down trend now lost. If you do not know where you are in the market such as I did not here, as the cycles change the root factors change draw the triangles on the sub time frames it will help. Remember down trends have high Root factors due to less time component being present.

# Chapter Thirteen – Timing Projections

In this chapter I will show you the Trajectory projections that the markets make. I have only just being November 2013 become aware how accurate and helpful this part of technical drawing is that I was developing. Instead of drawing support and resistance use the ctm and CTM's to project entry and exit points.

**This is particularly useful for swing and intraday traders, as well as the other long time frames one may wish to trade.**

**Chart 13.0 DJIA daily from March 2009 Low**

# Chapter Thirteen – Timing Projections

**Chart 13.1 SPI 60 minute chart**

Look closely at how I am projecting where support levels will come into play based on what the chart has already provided me.

By drawing the lines through the ctm and CTM's at support and resistance levels (usually around the halfway mark) within the CTM's you can predict two things, one the support or resistance levels and the timing of such.

**Chart 13.2 DJIA 60 Minute**

# Chapter Thirteen – Timing Projections

Chart 13.3 FTSE Weekly

# Chapter Thirteen – Timing Projections

The Weekly FTSE chart in 13.3 may just look like a lot of lines however look closely at it the market is showing you it is using Triangulation to pinpoint its position.

These lines projected forward will provide you with potential targets, confirmation of your calculations of the Tri-Rhythms process shown within this book and thirdly the timing of such.

The above line drawing along with the calculations will tell you much more quickly how long something will take to get to the target. Which will either:

- (a) Take profits
- (b) Stop you from entering a trade or;
- (c) Advise you to get out or;
- (d) Reverse the trade to get back the losses

Last chart is a Monthly chart of the NASDAQ

## Chart 13.4 NASDAQ Monthly

# Chapter Thirteen – Timing Projections

Off course it's all very well after the fact, that is true, but now you have read in this book that the markets are using triangulation, you can project on your chart.

# Chapter Fourteen - Tri-Rhythms

## Index charts

In this chapter, I will go through some index charts to illustrate that the markets tell you exactly where it is going before hand, all you need to do is figure out the formula and apply it then refine it as time goes by.

The first chart is a monthly chart of the Dow Jones Industrial average for the Growth cycle ending in late 2007. On this chart I have worked out the minor '1t' Tri-Rhythm was 1,846 Times this by 1.932 (in the Root of 3) gives you 10,756 which was 'C1'.

The difference from 5M to C1 was 3,566, which if you were to times by the same root three, number one would have got 6,889 or 14,079 which is just 119 points short of the high of 14,198.

The actual square root three factor was 1.965 times this by 3,566 and you would have got 7,007 actual was 7,008 just 1 point difference of 99.9999% accuracy. At worse 119 points divided by 7,008 would have been 98.4% accurate.

I have not calculated minor 1 to 5 to give me the major 1m to 5M targets, for brevity reasons but the author recommends you do this for practice to improve your skills set.

# Chapter Fourteen - Tri-Rhythms

## Index charts

You will also notice that crossing the 1t and the C1 horizontal lines with a trend line gave the approximate timing as well. This allows you not to worry about the volatility and talking head (news) if you only want to play the major trends.

As at the 15<sup>th</sup> November 2013 the market has met the target is set in 2009 by using the same factor it used in 2003 to 2007 Bull market within this 17.4 year Bear Market which ends in 2017 or just before.

I have used the old markings on this chart that I was experimenting with being the minor 'e' you see and still using the Wave theory markets incorrectly according to that theory, which I have proven in this book are the correct method of markings if one was to use that Alpha Numeric labeling system.

### Figure 14.0 DJI Monthly Chart

# Chapter Fourteen - Tri-Rhythms Index charts

# Chapter Fourteen - Tri-Rhythms

## Index charts

### The Next chart is of the FTSE in Chart 14.1

The first thing to notice is that there is a Tri-Rhythm within a Tri-Rhythm (Triangle within a Triangle)

1c Tri-Rhythm within the C1 Tri-Rhythm.

'1c' was 715 points times this by 1.987 provides you with 'C1' being 1420. Times this by 2.315 in the root of 5 provides the number of 3,287 take that away from 6,747 to arrive at 3,460, which was the low.

Again you must do some reverse engineering to see the numbers that the index uses. As cycles and rhythms change so do the factor numbers, so it is important to back test. That way one can be almost and sometimes EXACT !

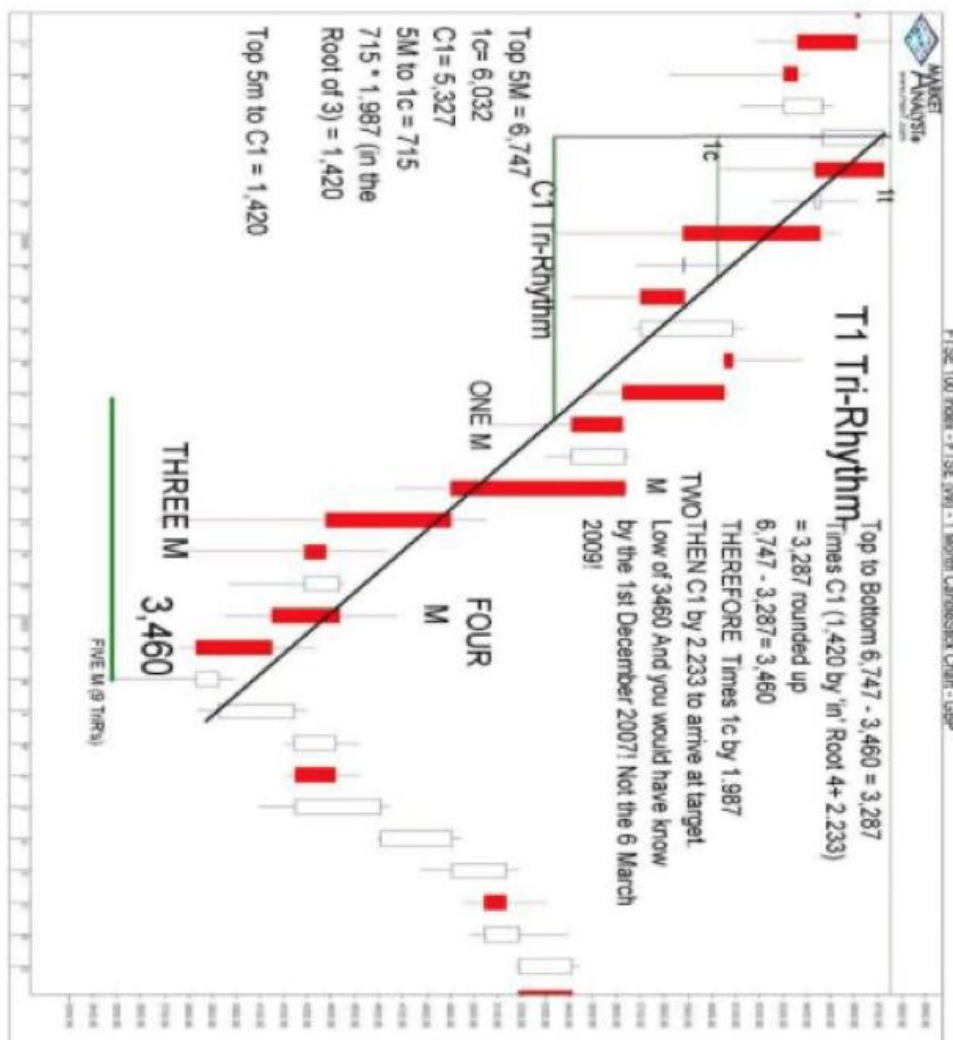

Note this very simple method. No indicators, no moving averages, no fundamentals, no almost or very little pattern recognition and the markets themselves tell you where they are going months to years in advance down to the TICK, if you want to go to that small a time frame. In case of the FTSE, 16 months in advance! Sixteen months in advance that you would have known the target!

# Chapter Fourteen - Tri-Rhythms Index charts

## HOW GOOD IT THAT?

Notice on the DJIA I had a minimum target of 15,870 at of writing today 13 November 2013 the DJIA cash index high is only 72 points away yet this was a target that could have been known 3 years ago!

Chart 14.1 FTSE

# Chapter Fourteen - Tri-Rhythms

## Index charts

Look at the 1929 to 1932 Crash in Chart 14.2 DJIA

The interest point about this chart is that from the Top '5M' (9 Tri-R's) to 'C1' Tri-Rhythms the index used a factor in the Root number of 8 being 2.894. This is a good example of the speed it was using.

The faster up or down the trend, the higher the root number it will use. This is because, as explained previously, of the Time and Price must balance. The faster the price the longer the time to balance. This is called squaring out.

Remembering the Square of 144 table if you go at a 45 degree angle you come to 144 from number 1. However if the market goes  $11*12$  quickly i.e. gets to 132 in a few minutes then it may take days to weeks or months to get to 144. This is why the markets appear to be going sideways at times.

Another reason why I think the trend line cutting through or very close to the 'c' and 'C' from 5M projects the approximate time the market will take to get to 'C' and 5M.

The DJI '1c' was 66 points times that figure by Root 2.894 (in the Square of Root 8) provides the value of

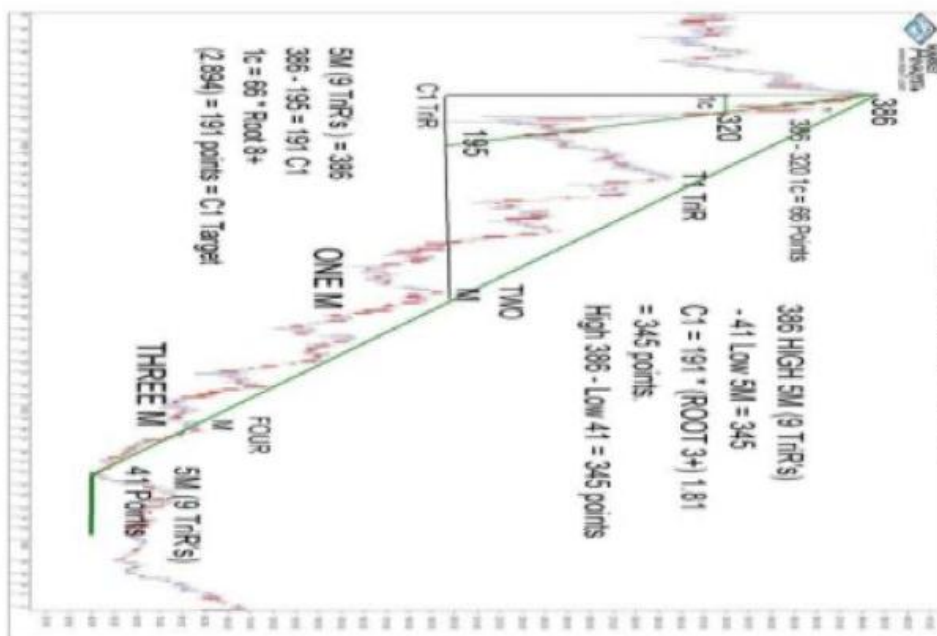

# Chapter Fourteen - Tri-Rhythms Index charts

191 points “C1” target take this from 386 provides the ‘C1’ target of 195 points.

Take the 191 value of ‘C1’ and times by 1.81 (in the Square Root of 3) provides the value of 345, take that from the high of 386 = 41 points, the 1932 Low. Again one could project minor 1m to 1M, 3m to 3M as well and as previously shown.

Same formula is used to arrive at the ‘1t’ and ‘T1’ Tri-Rhythms because all Tri-Rhythms work within the law of Vibration & Harmony.

**Chart 14.2 DJI 1929-1932 crash**

# Chapter Fourteen - Tri-Rhythms

## Index charts

In Chart 14.3 we look at the NASDAQ Index Crash. In the NASDAQ crash of 2000 to late 2002 you can see that the general guide of drawing a triangle with the hypotenuse guiding time did not work. This is why I said as a timing projector is a guide only, when trading one must be careful not to assume.

If one has done reverse engineering then one would have known within 6 days where it was going if not exactly certainly approximately. That is 5 days for the '1c' to form and calculate on the 6th day. In reality it only takes a few minutes.

The NASDAQ hit the high of 5,127 then 5 days later the low of 4,561 being the '1c' and a difference of 566 points.

Times this by 3.688 (in Root 13)  $(566 * 3.688) = 2,087$  take 2,087 from 5127 which leaves 3,040 which is the low of 'C1' TriR.

Take C1 being 2,087 and times this by 1.926 (in Root 3)  $= 4,019$ . Take 4,019 from the high of 5,127 provides the low of 1,108 at 5M (9 TriR's) in total.

# Chapter Fourteen - Tri-Rhythms Index charts

In Chart 14.3 NASDAQ Index Crash.

# Chapter Fourteen - Tri-Rhythms

## Index charts

In Chart 14.4 the Japanese market the Nikkei (225) has big numbers and therefore we can or may possibly expect large Square Root numbers.

The lack of data causes some problems so one must start from the Lowest or the highest point on the chart for back testing.

We can see that the Nikkei has used the Square Root of 24 or exactly the factor 4.965.

### Japanese Nikkei Down Cycle

There are two counts on this Index. If I am right this low of 6968 is 5m of 1 (9TriR's) Down.

In other words it may or possibly have completed the following only:

'1c & 1T' Tri-R

'C1 & T1' TriR and;

'1M' TriR

Leaving 2, 3, 4 and 5M to go. If that is the case and it used say in the root 2,  $1.5 * 24,840 = 37,260$   $38917 - 37,260 = 1,657$  Points Target !

We will see what happens. Chart 14.4

# Chapter Fourteen - Tri-Rhythms

## Index charts

This is the end of Chapter fourteen obviously I could have done this on a lot more indexes, however I leave that up to you to do the one you are trading. In Chapter Sixteen I have set Market Analyst on Training program mode to show you how to put the chart together in real time as it were.

**Chart 14.4 Japanese market the Nikkei (225)**

# Chapter Fifteen – Reverse Engineering

Reverse Engineering fancy term for back testing. Often I have said in this book you need to do this to be precise and that is the case. Below I show you how to do it on a Gold Chart. I have put this chapter in here for those do may be new to trading and may not understand what I am talking about. If you're not new to trading, then do not email me for examples, especially professional traders..... I did this for a professional trader and that is why it is incomplete with instructions advising him what to do

## Chart 15.0 Gold

General overview of back testing using the above chart  
Down Trend

1. Label the chart what you thing is best
2. Take the high from the low

# Chapter Fifteen – Reverse Engineering

3. Take the 1c from C1 find out the number and then find the square root number it used to project C1
4. Take the C1 number from the High and project to 1M, 3M and 5M
5. Do the same as in 4 for the 1m, 3m and 5m
6. Do the same as above for the 2m, 2M, 4m, and 4M i.e Find the 1c and C1 of each Tri-Rhythm and then times by a Square root number that when added together becomes the value of the high for the 2m, 2M, 4m and 4M
7. Do the same for the 1m, 1M, 3m, 3M, 5m and 5M
8. Then as the chart says in green do the same for the uptrends.

Remember what you are trying to find is the numbers the market you are wanting to trade uses.

When you have done that you can project your targets with confidence.

# Chapter Fifteen – Reverse Engineering

**Chart 15.1 India**

Results and instructions are on the chart, However I did this for another trader you can see by the arrow I am advising him to drill down further to see what Square Root factor the market may have used in the past to try and more informed.

# Chapter Sixteen - Training DJIA

In this chapter we go back to the Start of the Growth cycle in this Bear Cycle from the 6<sup>th</sup> March 2009 to the end. This chapter contains a lot of charts as I have turned on the Training Mode in Market Analyst but I will “walk” you thorough some of the processes.

My apologies if I miss some things out but the object of this chapter is to show you, in a way no one will have ever before, how to see the cornerstone TriRs (1c and C1) labeled them and from the 1c one predict the C1 and then times that out to get the 3 Magnitude Tri-Rhythms. Of interest being 1M, 3M, and 5M.

## Spreadsheet 16:0 1c cornerstone Using USA Dating Method.

DJIA 1c up (Cornerstone)				
NO	Name	Index Points	Point Value from Low	Date
0	0 or 9 TriR's	6469.95	0	3/06/2009
1	1c	7015.06	545.11	3/11/2009
2	1t	6867.55	397.6	3/11/2009
3	C1	7931.33	1461.38	03/26/2009
4	T1	7437.59	967.64	03/30/2009
5	1m	8190.66	1720.71	04/17/2009
6	2m	7791.56	1321.61	04/21/2009
7	3m	8587.55	2117.6	5/08/2009
8	4m	8221.01	1751.06	05/21/2009
9	5m	8877.23	2407.28	6/11/2009

It took 5 months to get to 1c! which I suppose if you have a bull market of almost 5 years in an overall 17.4

# Chapter Sixteen - Training DJIA

year bear market you are possibly talking about 5 months divided by 60 months or 5 years (5/60) = is Less than 9% of the time to complete 1c.

However it provides an indication of the time the next uses just to get to a basic Tri-Rhythm.

As you can see from Chart 16.0 The DJIA had already gone up 2,400 points and it had only got to 1c! Twenty odd percent and it had just started to get going.

**Chart 16.0 Low of March 2009 to the Top of 1c.**

# Chapter Sixteen – Training DJIA

Next we have the Trajectory ctm TriR's to get to 1t.

## Spreadsheet 16.1 Trajectory ctm of 1t

DJIA 1t (Trajectory TriR's) ctm of 1t of 9 Trir's up				
NO	Name	Index Points	Point Value from High of 1c	Date
0	1c	8877.23	0	6/11/2009
10	c	8461.29	415.94	06/17/2009
11	t	8616.59	260.64	06/19/2009

Obviously you can have the sub TriR's as well to make 27 instead of just 3. I will leave that for you to do should you wish to drill down even further.

Now we have this information if we had done our back testing we could move forward confidently and project the Tri-Rhythms of C1. Assuming your rushing ahead lets make some projections using the square root of 3 factor 1.732. I am just using one number however I would use the back testing numbers the market had previously provided me with.

I am only going to project the Magnitude Tri'R's 1,3,5m, you can do the others if you wish and I recommend you do, that's why they have been left out!

# Chapter Sixteen – Training DJIA

## Spreadsheet 16.2 Trajectory 1c up

DJIA 1c up (Cornerstone)					
NO	Name	Index Points	Point Value from Low	Date	Best guess without back testing information using Square root of 3 factor 1.732 Plus low of 6469.95
0	0 or 9 TriR's	6469.95	0	3/06/2009	
1	1c	7015.06	545.11	3/11/2009	
2	1t	6867.55	397.6	3/11/2009	
3	C1	7931.33	1461.38	03/26/2009	
4	T1	7437.59	967.64	03/30/2009	
5	1m	8190.66	1720.71	04/17/2009	9,450.22
6	2m	7791.56	1321.61	04/21/2009	
7	3m	8587.55	2117.6	5/08/2009	10,137.63
8	4m	8221.01	1751.06	05/21/2009	
9	5m	8877.23	2407.28	6/11/2009	10,639.36

## Chart 16.1 1c and 1t up of 9 TriR's

# Chapter Sixteen – Training DJIA

Now let's see how the numbers worked out, remember this was just an estimate assuming you have not done any back testing

## Spreadsheet 16.2 C1 of 9 TriR's up

DJIA C1 up (Cornerstone)						
NO	Name	Index Points	Point Value from Low	Date	Estimates were	Difference off
0	0 or 9 TriR's	6469.95	0	3/06/2009		
1	1c	8758.22	2288.27	07/17/2009		
2	1t	8668.66	2198.71	07/17/2009		
3	C1	9352.84	2882.89	8/06/2009		
4	T1	9133.53	2663.58	08/18/2009		
5	1m	9630.2	3160.25	08/28/2009	9,450.22	(179.98)
6	2m	9262.3	2792.35	9/02/2009		
7	3m	10342.72	3872.77	11/20/2009	10,137.63	(205.04)
8	4m	10249.84	3779.89	12/08/2009		
9	5m	10729.89	4259.94	01/19/2010	10,639.36	90.53

This informs us so far at least the DJIA market is using greater than Root 3 for Rhythms 1m & 3m and slightly less for 5m. But don't be fooled !

It is no good being this far out even though 200 points is only one days movement on the DJIA you want to get pinpoint accuracy – Do the reverse engineering for the market you are trading!

## Chapter Sixteen – Training DJIA

- 1a. 1m estimate  $(179.98/2,980.27) - 100 = 99.9396$  Success rate.
  
1. 3m 205.04 points out on a movement of 3,667.68 is  $(205.04/3,667.68) - 100 = 99.9440\%$  Success rate! And we have only just begun with estimates and not reverse engineering! Reverse Engineering will improve your accuracy.
  
2. 5m  $(90.53/4,169.41) - 100 = 99.9782\%$  not bad at all.

Average was  $(99.9396+99.9440+99.9782)/3 = 99.9539\%$  Already beating any indicator out there and every other process out there!

### Chart 16.2 C1 up of 9 TriR's

# Chapter Sixteen – Training DJIA

Now we have the information on 1t and C1 using estimates it time to estimate the Magnitude Tri-Rhythms. Because I am not using back testing data I am going to assume the following.

Please note that if I had back testing data I would have already have the targets calculated by the end of 1c up a few days after the 06/11/2009 non USA 11/06/2009 or 11<sup>th</sup> June 2009. Fancy that it's September 2013 and I

# Chapter Sixteen – Training DJIA

would have known the targets almost to pinpoint accuracy over 4 years in advance!

Please note I will be using the standard square root numbers in reality I would be using the numbers the back testing gave me and refine from there and therefore the result would be better than shown here.

Therefore 1M, 3M and 5M estimates are as follows.

## Spreadsheet 16.4 Estimates / Projections of 1, 3, 5M (Magnitude TriR's)

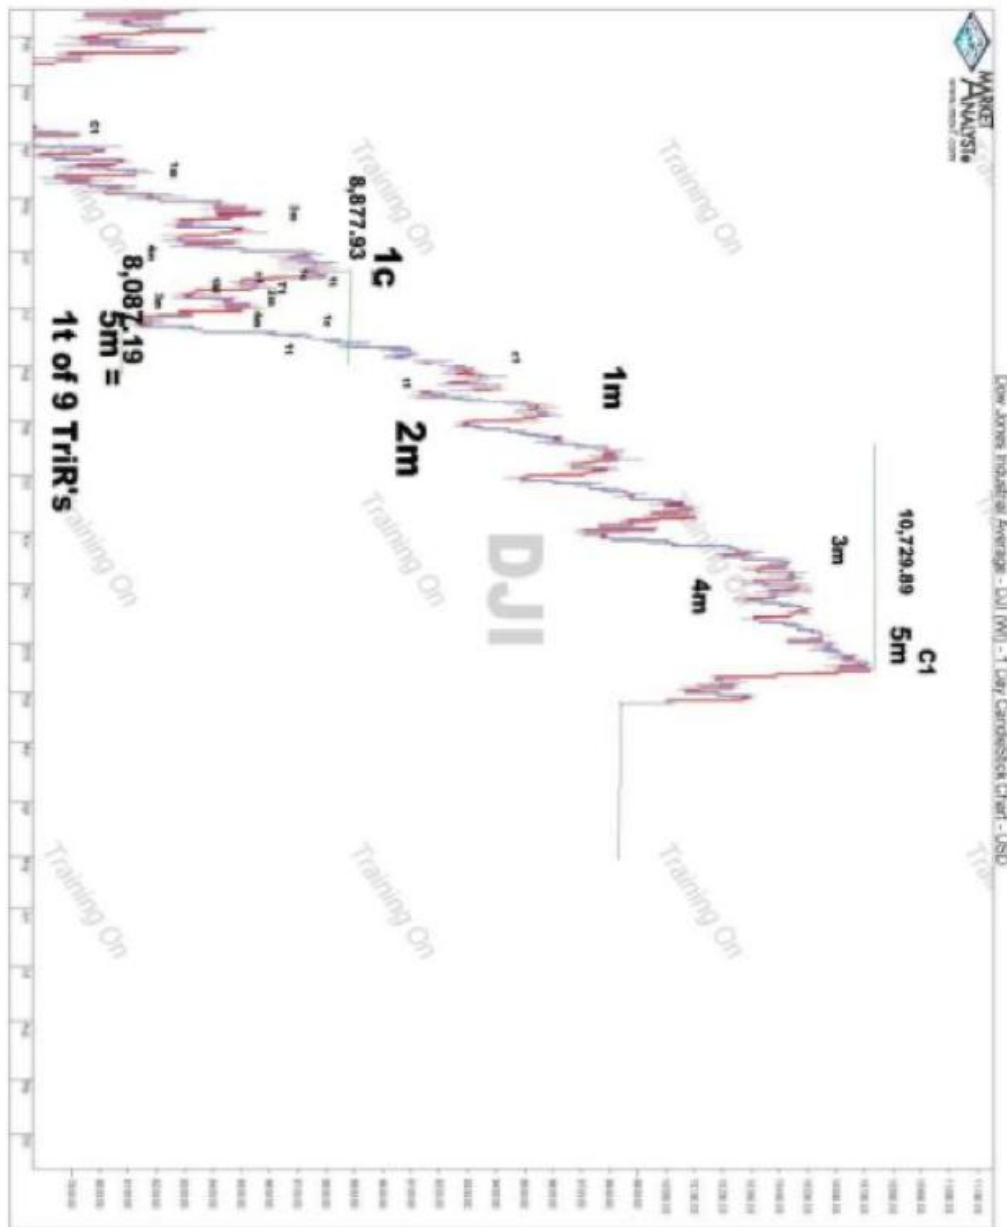

TriR	Index point value from low of C1	Root No / Factor	points	Plus low	Projected High
1M	3160.25	Root 2 / 1.414	4468.59	6469.95	10938.54
3M	3872.77	Root 3 / 1.732	6707.64	6469.95	13177.59
5M	4259.94	Root 5 / 2.236	9525.23	6469.95	15,995.18

## Spreadsheet 16.4 T1 of (9 TriR's) up

DJIA C1 (Trajectory TriR's) ctm of 1t of 9 Trir's up				
NO	Name	Index Points	Point Value from Low	Date
0	1c	10729	0	01/19/2010
10	c	10517.3	211.7	01/20/2010
11	t	10603.15	125.85	01/20/2010

# Chapter Sixteen - Training DJIA

Chart 16.3 T1 of 9 TriR's

Let see how these figures are starting to work out with 1M of 9 TriR's up

# Chapter Sixteen - Training DJIA

## Chart 16.3 1M up of 9 TriR's Line Projection

# Chapter Sixteen - Training DJIA

Estimate of 10,938.54 actual of 11,205.64 = 267.10 difference.

Which equals  $(267.10 / 4468.59$  'projected point value estimate') – 100 = **99.9402% Success rate**. Remember no back testing was completed could have got it closer!

Of note also notice the green trajectory line worked very well indeed showing where the index may have resistance in its climb.

## Chart 16.4 2M up of 9 TriR's UP

# Chapter Sixteen - Training DJIA

Chart 16.5 3M of 5M of 9 TriR's up

# Chapter Sixteen - Training DJIA

Also notice that I have drawn the grey right angles of the Triangles including 1c and T1 of 3M up, Indicating that you can calculate these points and project the next Magnitude moves up as per basic geometry.

Beware though, if you are late to the party, the square root numbers and factors will or maybe higher due to less time period being available from the Low. For example you may need the square root of seven instead of the square root of 5five or whatever. I have not projected them in this training I have left that for you.

**Chart 16.6 1m of 3M of 5M of 9 TriR's up**

# Chapter Sixteen - Training DJIA

# Chapter Sixteen - Training DJIA

Chart 16.7 4M of 5M of 9 TriR's up

3M estimate was 13,177.59 Actual was 12,876.00

$(13,177.59 - 12,876.00) = 301.59$  Difference

13,177.59 minus the low of 6469

$(301.59 / 6,707.64) - 100 = 99.9550\%$  Success rate!

# Chapter Sixteen - Training DJIA

Chart 16.8 4M of 5M & Triangle outlined

Chart 16.9 1c, 1t, C1 and T1 of 5M

# Chapter Sixteen - Training DJIA

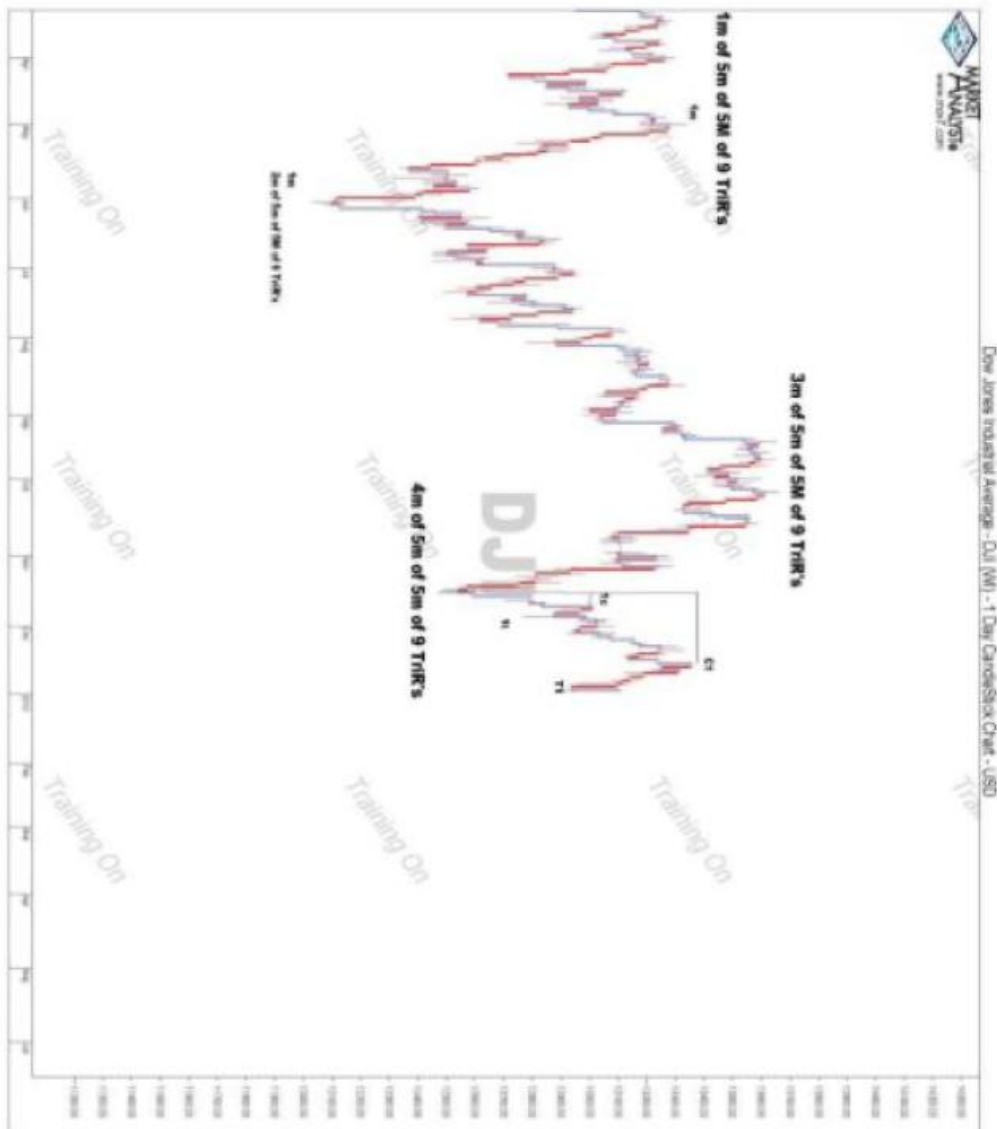

Chart 16.10 1c, 1t, C1 & T1 of 5m of 5M

# Chapter Sixteen - Training DJIA

**Chart 16.11 2m of 5m of 5M**

# Chapter Sixteen - Training DJIA

**Chart 16.12 4m of 5m of 5M**

# Chapter Sixteen - Training DJIA

**Chart 16.13 4m of 5m of 5M of 9 TriR's up,**

The top is Close, very close.

# Chapter Sixteen - Training DJIA

**Chart 16.14 Near THE TOP**

# Chapter Sixteen - Training DJIA

This could be the high here 16,175 or it could be 16,300 odd

I have put two 7 & 8 rhythms here, because as at 15<sup>th</sup> December 2013 I am not quite sure. (Alternate Count) I am playing there Trends watching labeling and calculating closely.

I hope this training mode and book has helped you greatly. Now you know how to target and therefore how to make excellent profits.

## **Wrap up**

By doing what is illustrated in this book you will lift your accuracy up to over 95% correct on points, no matter the time frame you are trading and, over time, get it closer to 99% and then possibly higher on average. Of course no one can get 100% and yours may differ a little however, if you follow the process, your Targeting Trading Accuracy will improve, assuming it is not 99% or better at the moment.

This book has endeavoured to show you that you do not need indicators, averages and moving averages fundamentals and the other entire fancy things one might be sold. This book has shown you, with the primary objective to show you how to use Triangular Rhythms or Triangulation, how to get your accuracy over 99% over time.

This is because markets move within the natural Law of Vibration & Harmony. It is not any Random Walk Theory. The natural law of vibration and harmony is perfect. All you have to do is apply what is written and get in harmony with what you are trading. The markets you are trading will then tell you where it or they going before it gets there, years in advance!

Of course you will need to do some reverse engineering and find the data that goes back as far as you can get it. With the Index only the DOW JONES Industrial Average can do that, but with Wheat you can go back 1000 years; with others not so long.

The point is, when you use the simple that we have been shown to use in the Stars and the Pyramid on Earth, trading the markets makes sense and it provides a 'hypotenuse' target, long before it gets to the target - sometimes five years in advance for up trends and months for down trends.

Of course this technique can be used wherever humans leave a mathematical trail and can be use over decades and hundreds of years to predict price. However, for most of us, five years is good to be invested, as the growth cycles are five years generally before a 'major' correction, assuming one gets in at the low.

If you buy stock at such a cheap price, that it makes sense to hold due to dividends paying off the stock and capital gains tax implications, then you may hold longer.

However, I am sure that if you play the long term trends when holding stock, you will be much better off in the long run even for paying the tax once every five years or so. **This book has concentrated on accuracy and showing you how accuracy is obtain far easily than you have ever been shown before.** This book has also focused on risk. After all it's about TIMING entry and exit points that makes fortunes in the markets. That has been demonstrated in this book without a high concentration of Timing. Many a retiree has lost their life savings and house doing that. The best way is to remember what God has said about TIMING and that is Ecclesiastes 3 Amplified Bible (AMP)

## Seasons

*To everything there is a season, and a time for every matter or purpose under heaven:*

*2 A time to be born and a time to die, a time to plant and a time to pluck up what is planted,*

*3 A time to kill and a time to heal, a time to break down and a time to build up,*

*4 A time to weep and a time to laugh, a time to mourn and a time to dance,*

*5 A time to cast away stones and a time to gather stones together, a time to embrace and a time to refrain from embracing,*

*6 A time to get and a time to lose, a time to keep and a time to cast away,*

*7 A time to rend and a time to sew, a time to keep silence and a time to speak,*

*8 A time to love and a time to hate, a time for war and a time for peace.*

**Just got to love it:**

**A time to gather and a time to cast  
away.**

**TIMING**

**A time to get and a time to cast away  
TIMING;**

**A time to break down**

**ctm and CTM Tri-Rhythms**

**A time to build up**

**Magnitude - M TriR's of profit and  
gain!**

**C for Cornerstone**

**T for Trajectory**

**M for Magnitude**

## FAQ

### 1. Is this not the same as Elliot Wave?

*NO. If you look in the book Elliott Wave Principle on page 75, chapter 2 – Guidelines of wave formation of Messer's Frost and Prechter, you will see that they have labeled the way I count the Triangle Rhythms or Triangulation as incorrect.*

*However, when you apply what I have shown in this book, the Cornerstone Rhythms "ct & CT of as expressed by numbers 1 to 4" what they have labeled on the page 75 as "ab & AcabcB" as **incorrect** actually provides the precise or almost precise targets that 1M,3M,5M will move to before the pattern is complete.*

***Mathematically this proves I am correct and the way they have labeled the pattern is in error.** Therefore I have not used or copied the Wave Principle or Theory, what the book deems incorrect I deem it as correct with **mathematical proof!** As per Lord Kelvin stated, I rest my thoughts on this!*

***I often say that when you can measure what you are speaking about, and express it in numbers, you know something about it; but when you cannot express it in numbers, your knowledge is of a meagre and unsatisfactory kind; it may be the beginning of knowledge, but you have***

***scarcely, in your thoughts, advanced to the stage of science, whatever the matter may be.***

*Lecture on "Electrical Units of Measurement" (3 May 1883), published in Popular Lectures Vol. I, p. 73; quoted in Encyclopedia of Occupational Health and Safety (1998) by Jeanne Mager Stellman, p. 1992*

*Also if we look in the booklet titled The basics of the Elliott Wave Principle ISZBN 0-93275063-X page 15 figure 4, we see 8 diagrams of Wave Theory. The patterns are all labeled differently however they all have one common theme, they all have **nine "waves"**.*

*There is **not** any mathematically proof of which one is correct, or which you can use for targeting projections which any accuracy of 95% or better and preferably 99.++++% to 100% accurate.*

*What I have shown you is that you can label the Rhythms the same as shown as wave Principle on page 75 chapters 2 – Guidelines of wave formation of Messer's Frost and Prechter, deemed incorrect on page 75, or you can label them 1-12 (9 in any one direction on any time frame) plus 3 for Trajectory projections to square our the circle or you can label them 1c, C1 1M, 3M, 5M for direction and magnitude and 1t, T1, 2M and 4M for Trajectory projections. Or you may wish to label using purely Alpha labels. You are aware now that 1c and C1 and the rhythms in between will or mostly give you the precise of almost precise "M"*

*magnitude movements up or down if you square root the hypotenuse of the triangle, and make adjustments accordingly to the back testing data you collected. In other words the labels are not important the **mathematics is**, because that is what you can rely on not the labeling.*

*Below is drawing of the 5 ways I suppose you could label them I now prefer #5 straight 1 to 9 plus 10,11,12 to square out the circle.*

*#1 is the way that is **deemed incorrect** according to Elliot Wave Principal Book Frost and Prechter page 75, ISBN 978-00471-98849-6 (PB) which I have now proven mathematically correct.*

*#2 is the way I designed and used in this book except for old charts to prove to you that these targets and percentages I achieved were the Truth*

*#3 Alpha way to label the charts if you wish*

*#4 I have added the 10,11,12 Tri-Rhythms being the 9,3,and 6 O'clock to square out the Circle and therefore you have 4C's for Cornerstones (you can use T if you like for Triangle's). 4'S's to square out the square and 4C's to square out the circle making 12.*

*#5 1 to 9 is easy!*

*Remember it is 1 to 12 to square out everything and start again at #13 being the change number.*

# FAQ

## FAQ 1.0 Five ways to Label

### 2. Why do you not use indicators?

*When one is 99.++++% correct to 100% at times based on the projections from the Cornerstone Rhythms 1c,1t & C1,T1 why would I need to? You only need indicators like volume, MacD, Keltner channel, Multiple Moving averages, and the like for example, when you do not know what or where the market is going i.e. if you're measuring after the fact. Even then I have shown you now by drawing and counting the triangles at lower time frames how to find out where you are in the markets and or best re-entry points, which solves another question which has long been unanswered and that is where to get back in if one got out early.*

### 3. What about Zig Zags?

*That is a Wave theory term and I ask, what about them? In actual fact, wave theory says they have nine 'waves' in them and all of the 'waves' about even. Every set of Rhythms or 'waves' – wave theory terms' have nine in them, as this book has proven. Revisit chapters one - three. Plus 3 more rhythms or waves to square the circle out.*

***ZigZags prove this book is correct. In fact without looking into it further my guess is even rhythm zigzags patterns are probably mimicking the even rhythms of Mercury.***

*Mercury is the only planet that orbits the sun in an almost perfect circle. Hence every 90, 180 or 360 degrees becomes a high or low point. However that is an area needs review but makes sense to me, on higher plane of Vibration and Harmony which is not of focus in this book.*

#### **4. What about Extensions?**

*There is no such thing as extensions in the Law of Vibration and Harmony. To say so is saying that the Law of the Lord is imperfect. Psalms 19 v 7.*

*More likely our understanding of it is imperfect. As proven by many people and by the stars and planets and proven in this book with the planet Uranus alone that timing can be completed by*

*That is a Wave theory term and I ask, what about them? In actual fact, wave theory says they have nine 'waves' in them and all of the 'waves' about even. Every set of Rhythms or 'waves' – wave theory terms' have nine in them, as this book has proven. Revisit chapters one - three. Plus 3 more rhythms or waves to square the circle out.*

***ZigZags prove this book is correct.*** *In fact without looking into it further my guess is even rhythm zigzags patterns are probably mimicking the even rhythms of Mercury.*

*Mercury is the only planet that orbits the sun in an almost perfect circle. Hence every 90, 180 or 360 degrees becomes a high or low point. However that is an area needs review but makes sense to me, on higher plane of Vibration and Harmony which is not of focus in this book.*

#### **4. What about Extensions?**

*There is no such thing as extensions in the Law of Vibration and Harmony. To say so is saying that the Law of the Lord is imperfect. Psalms 19 v 7.*

*More likely our understanding of it is imperfect. As proven by many people and by the stars and planets and proven in this book with the planet Uranus alone that timing can be completed by*

*tracking the mathematical alignments of the solar systems.*

*The Solar System has been there for thousands of years. Are you going to say that the mathematical alignments of the solar system are incorrect and there by saying the Law of the Lord is imperfect? No, more likely mankind's understanding is not perfect*

*Also, if you look at the extensions that Wave theory or Principle has drawn in the Elliott Wave Principle page 19 No 3. Book, they have nine rhythms in them or in wave theory terms nine waves! Again proving I am correct.*

*In fact if you look at all the letting and labeling going on it changes, they are not consistent from what I can tell anyway. **Tell me which one is correct and prove it with mathematics that are consistently on target and I believe you, that is what I have done in this book. Lord Kelvin would believe me if he were alive before wave theory or principle because wave theory activists have not and do not back up their wave theory or principle with solid mathematics. Which is why they do not offer targets.***

*The Rhythm pattern is nine waves up and three Rhythms to square out the circle for trajectory. If there are only ever nine rhythms how can there be extensions? Extensions are justifications to*

*getting it wrong in the first place in my opinion anyway.*

- 5. How is a person who left high school early able to figure this out and get a 99.++++ to 100% accuracy rate at times?**

The truth is I applied this scripture Proverbs 25 v 2 KJV

***“It is the glory of God to conceal a thing: but the honour of kings is to search out a matter”***

*To me, God has awarded me the honour for finding out the Truth and now I share it with you, because that is what I would expect from anyone else – that they would share the truth with me, even if I had to pay a small amount for it as you have done for this book.*

***Simple faith I know but hey, I searched it and I found it. None of the others, even the learned or highly educated have done that!***

- 6. What about the news?**

I do not watch the news anymore. In fact, I am usually 2-5 days behind the news in my knowledge of what is happening in the world, yet I am still 99.++++% accurate. I rest my case mathematically one does not need to know the news!

## Notes

I was going to write two of these books, one for Christians and one without all the Scriptures and the like in it. Then I thought WHY?

THE TRUTH is God set up the Law of Vibration and Harmony and all the other things we know about creation, as proven by mathematics.

Therefore for those who did not like all the Christian content, it was not done to offend you, but rather that you may know and come to know the TRUTH. After all you want to make profits and the knowing the TRUTH is the best way to do it, AND for that I make no apologies.

The Christian information was not to put it in your face not at all, but along with the other information to prove to you without a shadow of a doubt. That ALL FINANCIAL Markets MUST move according to the LAW of Vibration and Harmony, which is found all over the planet and in the Stars and therefore inescapable from recognition.

*I have proven to myself as well as demonstrated together, that using Triangle Rhythms (Tri-Rhythms) (Triangulation) in the market charts projects the future targets that the market is moving too. Dr. B. D. G. Gumm*

**Further notes on the Pyramid and why just using  
Fibonacci numbers for or only every using one, fact  
of Pi or Phi is not enough.**

This next section is resourced from  
<http://blog.world-mysteries.com/science/the-great-pyramid-and-the-speed-of-light/>

The Great Pyramid encodes enormous amount of numerical coincidences ( pi, Phi, dimensions and movement of our planet, axial tilt, precession, speed of light, and more...)

We can only wonder if the ancient architects were fully aware of these special numbers encoded in their design — or are these numbers simply the result of selecting 2 numbers (7 and 11) for proportions for the Great Pyramid???

The design of the Great Pyramid is based on the ratio 11:7. This ratio (equal 1.571) is perfect approximation of the “squaring the circle” principle.

For the Great Pyramid, Base to Height Ratio  $440/280$  is exactly  $11/7$  (Notice #117) This single, fundamental design principle:  $11 : 7$  Base to Height Ratio generates ALL amazing mathematical properties of the Great Pyramid: The Golden Ratio  $\Phi = 1.618$  (the Great Pyramid is a Golden Pyramid: length of the slope side (356) divided by half of the side ( $440/2 = 220$ ) height is equal to 1.6181818... which is the Golden Ratio.

## Notes

- squaring the circle ratio 1.571 (base/height =  $44/28 = 1.571$ )  
 $\pi = 3.14159\dots$  ( $2 \times \text{base/height} = 2 \times 44/28 = 3.14286$  which is very close approximation of “ $\pi$ ” =  $3.14159\dots$ )
- Perimeter of the square base,  $4 \times 440 = 1760$ , is the same as circumference of the circle with radius = height:  $2 \times \pi \times \text{height}$  ( $2 \times 22/7 \times 280 = 1760$ )
- The ratio of the perimeter to height of  $1760/280$  cubits equates to  $2 \times \pi$  to an accuracy of better than 0.05%
- Side of the base (440) plus double height ( $2 \times 280 = 560$ ) = 1,000
- Perimeter of the square base is equal  $4 \times 440 = 1760$   
RC = 0.5 nautical mile =  $1/7$ , 200th of the radius  
length of the earth the slop angle  $51^\circ.843$

Ever tried measuring the slope angles in the markets?

The Pyramid exhibits in the design both  $\pi$  and by  $\Phi$ , given the similarity

- $2 / \sqrt{\Phi}$  (2 divided by the square root of  $\Phi$ ) with  $\pi/2$  :
- $11/7$  equal 1.5714

- $2 / \sqrt{89/55}$  equal 1.5722
- $2 / \sqrt{\Phi}$  equal 1.5723
- $\pi / 2$  equal 1.5708
- Royal Cubit = 0.5236 m,  $\pi - \Phi^2 = 0.5231$

Off course all things have their vibration number and will probably differ from the above therefore find the numbers for the market you are trading, multiply out the values between Tri-Rhythms and watch your accuracy go to or almost to 100% and sometimes 100% !

Also if the font has changed a couple of times don't worry be happy!

## A Word from W D Gann

A Christian man who in 1908 achieve a 91% Audited accuracy rate, below we see what he used.

*“I have proven to myself as well as demonstrated together, that the law of vibration explains every possible phase and condition of the market”.*

W.D Gann.

**Trading has never been so easy.  
Thank you for Purchasing this book & Best  
Wishes.** Dr. Barry D G Gumm

Final word from Amplified the bible.

Isaiah 48 v 17 Old Testament – Amplified  
Bible

**Thus says the Lord,  
your Redeemer,  
the Holy One of Israel:  
I am the Lord your God,  
Who teaches you to  
profit...**

# **Donations**

## ***Railway Kids (children) India***

**Please note that a portion of all proceeds of this book will be donated to the Rail Kids India mission.**

**This mission is run by the Lifehouse Church Coffs Harbour Australia.**

**Helping kids to hope and dream again.**

**Railway Kids gives help to vulnerable, neglected children living on the Indian railway platforms by providing:**

- **A place of safety**
- **Practical assistance**
- **Skills training**

- **Emotional support**
- **Encouragement**
- **Love**
- **Acceptance and the hope of a better future.**

**More about this valuable mission is available here**

**<http://www.railwaykids.org/>**

**To donate go here:**

**<http://www.railwaykids.org/#!/getinvolved/c11p9>**

**Your donation will be very gratefully received.**

## ***Men's Resource Centre – Coffs Harbour***

**Men's Resource Centre is focused on creating a safe and nurturing environment for men and their families by offering advocacy, counseling and programs.**

**Our aim is to provide a first point of contact for men and their families in the Coffs Harbour Mid North Coast Region who find themselves in a position of need. We offer these men and their families access to a variety of services, courses and personnel. This access provides a firm foundation for these men and their families to regroup and overcome their individual obstacles.**

**<http://www.mensresourcecentre.org/donate>**

**Your donation will be very gratefully  
received.**

# How to get oneself right with God

I was going to leave this out as well then I thought why, this was my commission in the first place Matthew 29:19, so this is how to get right with God, Really this should have been chapter one!

## Salvation Message

### John 3:1-7

There was a man of the Pharisees, named Nicodemus, a ruler of the Jews:

The same came to Jesus by night, and said unto him, Rabbi, we know that thou art a teacher come from God: for no man can do these miracles that thou doest, except God be with him.

Jesus answered and said unto him, Verily, verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God.

Nicodemus saith unto him, How can a man be born when he is old? can he enter the second time into his mother's womb, and be born?

Jesus answered, Verily, verily, I say unto thee, Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God.

That which is born of the flesh is flesh; and that which is born of the Spirit is spirit.

Marvel not that I said unto thee, Ye must be born again.

“WE BELIEVE – In receiving the Holy Spirit with the bible evidence of speaking in tongues, and that it helps us to pray.”

### **Mark 16v17**

And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues;

### **Acts 2 v 1-4**

And when the day of Pentecost was fully come, they were all with one accord in one place.

And suddenly there came a sound from heaven as of a rushing mighty wind, and it filled all the house where they were sitting.

And there appeared unto them cloven tongues like as of fire, and it sat upon each of them.

And they were all filled with the Holy Ghost, and began to speak with other tongues, as the Spirit gave them utterance.

### **Romans 8v26**

Likewise the Spirit also helpeth our infirmities: for we know not what we should pray for as we ought: but the Spirit itself maketh intercession for us with groanings (speaking in tongues) which cannot be uttered.

“WE BELIEVE in divine healing by personal faith in Jesus Christ.”

### **Mark 16 v18.**

“they shall lay hands on the sick, and they shall recover”.

Here it is in a Song, by a old Friend Mr. Paul Rocchi, Repent & Be Baptised from his New Jerusalem Album. It is the best song I have heard on how to get saved for all Eternity.
